MAHBUB SHAH, Superintendent,
*Office of Director of Land Records, Punjab.*

# Notes on the condition and prospects of crops, etc., in each district of the Punjab during the month of July 1916

## 1.—Hissar District.

Rain is general, but not sufficient in Hissar, Hánsi and some parts of Fatahabad Tahsil. Sowings of autumn crops continue, and are below normal owing to insufficiency of rains and canal water. Standing crops are in fair condition. Cattle lean and underfed. Fodder scarce and being imported by rail in small quantity. Green grass is available in some places. Water-supply in perennial canals insufficient and in inundation canals sufficient for irrigation. Grain stock sufficient for local requirements. General health good.

## 2.—Rohtak District.

Rainfall below average, except in Sonepat Tahsil, but is sufficient for sowings which are being made throughout the district. Sowings of jowar, bajra, cotton, indigo and fodder continued. Area sown is about normal. Condition of standing irrigated crops generally fair to good, and of unirrigated generally good. Condition of cattle is improving. Green fodder is generally available and will soon be adequate. State of public health generally good. Supply of canal water was generally adequate. Water sufficient in village tanks. Prices between normal and warning rates. Locusts appeared and did some damage in parts of Tahsils Rohtak, Gohána and Jhajjar and laid eggs. Measures for destruction are in progress.

## 3.—Gurgaon District.

Good rain fell throughout the district which benefited the standing crops and was quite sufficient for kharif sowings. Kharif crops were sown to normal extent. Condition of the standing crops is fairly good. Cattle now improving. Fodder scarce. Stock exhausted, but green grass is plentiful. Health of people good. Canal remain generally closed, and irrigation was not needed.

## 4.—Karnal District.

Rainfall deficient in Kaithal, Bangar and Guhla Sub-Tahsils, good in Karnál and Thánesar Tahsils, and fair in Pánipat and Kaithal Tahsils. Sowings of kharif crops finished. Condition of crops in irrigated and unirrigated lands fair. Expected yield rather above average. On the whole condition of cattle good. Fodder sufficient, except in Guhla. Health of people good. Supply of canal water sufficient. Markanda, Saraswati and Jumna overflowed, inundating the adjoining country.

## 5.—Ambala District.

Rainfall above average. Sowings of kharif crops in progress and are timely. Crops are germinating well. Condition of the standing crops both on the irrigated and unirrigated lands is good. Yield is expected to be good. Cattle generally are in good condition. Fodder and water-supply sufficient. Public health good. Western Jumna Canal flowed continuously, but no lands were irrigated.

## 6.—Simla District.

Rainfall in both tahsils sufficient. No sowings made. Condition of standing crops in Simla Tahsil is good and in Kot Khai below average. Condition of cattle good. Fodder and grazing sufficient. Public health good. Water in hill streams sufficient.

## 7.—Kangra District.

Rainfall during the month was generally above the average and proved very beneficial to the standing crops. The sowing of kharif crops was completed during the month. The kharif crops are in good condition at present. Cattle in good condition generally. Fodder was sufficient. Public health was generally good. Water in kuhls and streams was sufficient for irrigation purposes.

## 8.—Hoshiarpur District.

Rainfall sufficient. Sowings of kharif crops completed during the month. The condition of standing sugarcane, cotton and other crops satisfactory. Yield expected to be good. Condition of cattle generally good. State of public health generally good. Shah Nahr Canal continued to work during the month. Prices of food-grains falling.

9.—JULLUNDUR DISTRICT.

Rainfall above average and beneficial to the standing kharif crops. Sowings of chari, mung, mash, moth and maize in progress, and are normal. Preparation of land for next rabi commenced. Standing irrigated sugarcane, cotton and fodder crops in good condition, and unirrigated crops average. Cattle in good condition. Fodder sufficient. Public health generally good.

10.—LUDHIANA DISTRICT.

Rainfall throughout the district was abundant and well distributed. It benefited the standing crops on high lands, but damaged the cotton crop on low lands in Samrála Tahsil. Sowings of chari, til, jowar, bajra and other crops completed, but that of maize is still in progress. Condition of standing crops satisfactory. Condition of cattle satisfactory. Green and dry fodder available. Public health generally good. Irrigation from canals continued up to the middle of the month and then stopped, as owing to sufficient rainfall it was not required. Prices of food-stuffs stationary. The village of Razapur in Ludhiána Tahsil was washed away by the action of Sutlej river, also some 30 acres of land by the Kingwah Canal in Jagraon Tahsil.

11.—FEROZEPORE DISTRICT.

The rainfall was sufficient and timely. It proved beneficial to standing crops. Sowings of kharif crops continued. The condition of standing crops is good. The condition of cattle is satisfactory. Green grass is available. The public health is generally good. The flow of Sirhind and Grey Canals was good. There was a slight rise in prices of wheat and other food-grains owing to heavy export.

12.—LAHORE DISTRICT.

Exceptionally heavy rain was received on 13th and 14th; the fall being heaviest on record ever since 1900. Some damage has been done to cotton on lowlying lands and early jowar and moth, but maize and rice, the staple crops of the kharif, had not practically been sown on any large areas. Rice, maize, chari, moth and bajra were sown on irrigated lands, and til, moth and bajra on unirrigated lands. The extent of sowings on both was normal. Standing crops of sugarcane, cotton and rice generally satisfactory. Condition of cattle good. Water and fodder sufficient. Public health good. Both the perennial and inundation canals, were flowing in the month. Fortunately enough, the floods in the rivers were not so heavy.

13.—AMRITSAR DISTRICT.

Rice, chari, maize and til were sown. Standing crops of irrigated and unirrigated areas good. Expected yield good. Condition of cattle average. Public health is generally good. Canals are working by rotation. Supply sufficient. Ordinary floods in rivers Ravi and Beas.

14.—GURDASPUR DISTRICT.

The rainfall during the month was almost average. Kharif crops were in progress. Standing crops generally good. Cattle generally healthy. Fodder is sufficient. Public health is good. Rivers are in full flow. There was no heavy flood in both the rivers Ravi and Beas. Prices almost unchanged.

15.—SIALKOT DISTRICT.

Sowings of maize, chari, bajra and til continued in the first part of month, and was restricted afterwards on account of excessive rains. Condition of standing crops good. Cattle healthy. Dry fodder scarce, but green procurable. Public health generally good. Irrigation from Canal Raya Branch continued in first portion of the month, but afterwards it was closed on account of excessive rains. Floods inundated lowlying lands and damaged the crops in those areas.

16.—GUJRANWALA DISTRICT.

Heavy rain fell during the month all over the district. Crops in lowlying places of a few villages were considerably damaged. The banks of rajbahs and channels were cut off at some places for the flow of water. Sowings of rice, jowar, mung, moth, maize, bajra and til were in progress. General condition of crops is good. The condition of cattle is good. Fodder and grazing quite sufficient. Public health generally good. Owing to excessive rains the canal irrigation was stopped for some days. Now the Upper and Lower Chenab Canals are again opened. The surrounding villages of Deg Diversion, Tahsil Sharakpur, suffered to some extent from the excess of water by the flood in river Ravi.

17.—Gujrat District.

Heavy rains received during the month. Sowings practically finished. Condition of standing crops is good, though weeding could not be done owing to incessant rains. Cattle are in good condition. Green fodder is sufficient. Public health is good. Heavy floods in rivers and hill torrents have done damage to the crops on their banks and in lowlying lands.

18.—Shahpur District.

There has been sufficient rain throughout the district, except in Thal circles of Khusháb Tahsil, where it is badly needed. The sowings of kharif crops are rapidly in progress. The condition of standing crops was good on irrigated and normal on unirrigated area, except in Khusháb Tahsil, where it is normal on the former and below normal on the latter. The outturn is expected to be good. The condition of cattle was generally good. The state of public health was good. Lower Jhelum Canal and inundation canals continued to run with sufficient supply of water. The Jhelum river flooded once and benefited the lands within its reach.

19.—Jhelum District.

Excellent and opportune rainfall during the month allowed general kharif sowings which are nearly completed throughout the district. The condition of cotton and newly germinated crop is good. Cattle generally good. Green fodder sufficient. Public health good. Great rise in the Jhelum on the 15th and 16th July. Prices are rising generally owing to less imports.

20.—Rawalpindi District.

Rainfall excellent and quite timely. Kharif sowings are in progress on an extensive scale. Kharif crops in good condition, except in hills, where want of sun is likely to affect the outturn. Prospects good. Cattle in good condition. Grazing is abundant. Public health good.

21.—Attock District.

Maize, bajra, jowar, moth and mung have been or are being sown. Condition of standing crops good. Cattle in fair condition. The recent rains will produce green grass. Public health good. Water sufficient. Prices have slightly risen.

22.—Mianwali District.

Jowar, bajra and moth being sown. The condition and expected yield of kharif crops average to good. Cattle healthy. Fodder will soon be sufficient. Public health good. Floods watered lands in riverain tracts. If the flood water subsides in time, more sowings are expected. The Kurram Canal is watering lands sufficiently in Isa Khel. The hill torrents also did fairly well. The Nammal Canal is watering lands in the civil station.

23.—Montgomery District.

Sowings of til, jowar, bajra, makki and rice continued. Condition and expected yield of standing crops is good. Heavy rains have damaged crops in parts of Dipálpur and Pákpattan Tahsils. Cattle healthy. General health good. Rivers and canals are flowing. General condition good. The price of grain is rising.

24.—Lyallpur District.

Rain generally sufficient. Chari, rice and maize and other crops were sown. Standing crops are flourishing. Cattle were in good condition generally. Fodder sufficient. Public health good. There were floods in the Ravi and Nala Deg.

25.—Jhang District.

Rain above average in the Jhang and Shorkot Tahsils, but below the average in Chiniot Tahsil, jowar, bajra, til, maize, chari, etc., are being sown Crops are in average condition in the Jhang Tahsil and in good condition in the Chiniot and Shorkot Tahsils. Cattle healthy. Green fodder and bhusa available in sufficient quantity. Public health good. Canals flowing. Inundation from both the Jhelum and Chenab have taken place on a considerable scale. Prices stationary, except of wheat, which are rising.

26.—Multan District.

Rain fell throughout the district, and proved beneficial to the standing crops as well as to sowings of jowar, bajra, rice, maize, cotton, etc. Condition of crops on both irrigated and unirrigated areas average. Outturn of tobacco and onion average. Condition of cattle fair. Bhusa and green grass of jowar available. Health of people good. All inundation canals and Sidhnai Canals flowed with adequate water. Rivers were in flood. Prices of grain rising.

27.—Muzaffargarh District.

Jowar, bajra, til, rice and moth were sown during the month. Condition of crops average in Leiah and good in the remaining three tahsils. The outturn of indigo is expected to be good. Cattle generally healthy. Fodder available. Public health good. Abnormal flood in Muzaffargarh likely to damage the kharif crops, but decidedly advantageous to rabi. A slight complaint of deficiency of water at the tail of the Sardar Canal in Sanáwan Tahsil. Prices of food-grains are slightly rising again.

28.—Dera Ghazi Khan District.

Total rainfall during the month is much below the average, and has been of some use to the sown crops. Condition of standing crops average. The expected yield is average. The condition of cattle is on the whole good. Fooder is scarce in most parts of the district. Public health good. Canals are running well, and there have been moderate floods in hill torrents and the river. Prices are stationary.

Temporary incursions of the monsoon took place occasioning rain chiefly in and near the Hills; but although the first fall of the rainy season occurred in the second
and Murree. The fall was unusually heavy at Simla. The month was rainless at Multan and Montgomery.

The air contained more moisture than usual and the quantity of cloud was in general above the average. Temperature was low at Ambala and Simla, in slight excess

As compared with the corresponding month of the previous year, there was an increase of 11,195 births or 7·39 *per mille* of population which was shared by all the
of 8·37 *per mille* of population which was general throughout the province, but most marked (7·82) in the Multán Division.

There was a decrease of 2·23 *per mille* of population in the death rate for the month under report as compared with the rate for the same month in 1915. The
month there was a decrease of 1·44 *per mille* of population which was confined to the Jullundur and Lahore Divisions only. With the exception of injuries every head of mortality

There were 33 deaths (including 9 which occurred in towns) from cholera recorded during the month under review as against 39 in the last month and 3,569 in the

| 10 | Shahpur ... | 3·34 at Sadr ... 5·12 at Bhera. 1·12 at Shahpur. 1·70 at Khushâb. | 1. Sufficient ... 2. (b) Canals flowing; supply sufficient. 3. Good, except in Thal circle of Khushâb Tahsil, where grass has now grown up and will much improve the condition. | Wheat, 10½ to 11¼ seers. Barley, 13 to 13½ seers. Gram, 11 to 12 seers. Jowar, 12 seers. Bajra, 10 to 13 seers. Maize, 12 to 15 seers. Prices generally between warning and scarcity rates. | Condition of extra spring crops good. | Sowings of millets continue in Khushâb Tahsil, and are normal. Standing cotton, sugarcane and other crops generally good, except in Thal circle of Khushâb Tahsil, where sowings were recent. Cotton slightly attacked by bollworm in Sargodha Tahsil. |
| 11 | Râwalpindi ... | 6·02 at Sadr ... 7·48 at Gujar Khan. 6·27 at Kahúta. 10·95 at Murree. | 1. Sufficient ... 3. Good. | Wheat, 10½ seers... Barley, 14 seers. Gram, 11½ seers. Bajra, 12 seers. Maize, 14 to 15 seers. Prices between normal and warning and warning and scarcity rates. | Sowings of taramira commenced in Râwalpindi Tahsil. | Rain was sufficient and beneficial. Standing crops good, but slight damage to pulses by insects is reported in parts of all tahsils, except Murree. |
| 12 | Miánwáli ... | 1·27 at Sadr ... 3·32 at Isa Khel. 0·25 at Bhakkar. | 1. Procurable ... 2. (b) Nammal Canal flowing. 3. Good. | Wheat, 10½ seers... Barley, 12 seers. Gram, 12 seers. Bajra, 8 seers. Except for wheat, prices are close to or at above scarcity rates. | Ploughings commenced. | Sowings continue, and are normal. Standing crops average to good. Crops on riverain tracts submerged by flood water. |
| 13 | Lyallpur ... | 1·37 at Sadr ... 1·64 at Jaránwála. 0·31 at Toba Tek Singh. 0·80 at Samundri. | 1. Sufficient ... 2. (b) Canals working by rotational closures; supply normal. 3. Good. | Wheat, 10½ seers ... Gram, 11½ seers. Maize, 17½ seers. Barley, 13 seers. Prices between warning and scarcity rates. | Extra spring crops good. | Sowings of maize, fodder, etc., continue, and are normal. |
| 14 | Multán ... | 1·58 at Mailsi ... 0·09 at Lodhrán. 0·51 at Kabírwála. | 1. Available ... 2. (b) Canals flowing; supply adequate. 3. Fair. | Wheat, 10½ seers... Gram, 11½ seers. Barley, 11½ seers. Maize, 15½ seers. Bajra, 11½ seers. Prices between normal and warning or warning and scarcity rates. | Ploughings for spring crops commenced. | Rain was useful. Sowings nearly completed, and are normal. Standing irrigated crops good and unirrigated average. |

## *GENERAL REMARKS.*

Fairly heavy rain has fallen in parts of the submontane and western districts, and light to moderate elsewhere. It has been beneficial, but more is not required for the present. Standing crops are in good condition, but they have been slightly damaged by floods in parts of the submontane tract. Sowings of autumn crops continue in some districts, and are normal. Cattle are healthy and fodder is sufficient. Water for drinking and irrigation purposes sufficient. Prices are generally stationary, and, in case of wheat, range between normal and warning and in other cases between normal and scarcity rates. Prices of wheat:—Lahore and Lyallpur 10½, Ambála, Ferozepore and Râwalpindi 10½ seers per rupee.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 12th August 1916, there were 1,199 births registered in the 36 large municipal towns (627 males and 572 females), giving a birth rate of 53 *per mille* of population, and 789 deaths were registered (381 males and 408 females), giving a death rate of 35 *per mille* of population. The death rates registered in the three largest towns were as follows :—Lahore 28 against 28 in the corresponding week of the previous year; Amritsar 28 against 43, and Multán 34 against 20.

There was 1 death reported from plague in Ráwalpindi. There were 21 deaths recorded from cholera in Gujránwála, 20 in Jagraon, 14 in Pánipat, 13 in Ferozepore, 3 in Amritsar and 1 in Lahore.

Standing irrigated crops good, and unirrigated average. |

## GENERAL REMARKS.

Fairly heavy rain has fallen in parts of the south-east and submontane tract, and light to moderate elsewhere. More is not required for the present. Standing crops are in good condition, but in parts of a few central districts maize and jowar have been damaged slightly by insects and in one or two districts by excessive rains. Sowings of autumn crops nearly completed, and are normal. Ploughings for spring crops continue in a few districts, and sowings of toria and taramira have commenced. Cattle are healthy and fodder is sufficient. Prices are generally stationary, but have fallen slightly in some districts. In case of wheat they range between normal and warning, and in other cases between normal and scarcity rates. Prices of wheat:—Lahore and Lyallpur 10 and Ambála, Ferozepore and Ráwalpindi 10½ seers per rupee.

D. J. BOYD,

## *Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 19th August 1916, there were 1,237 births registered in the 38 large municipal towns (675 males and 562 females), giving a birth rate of 54 *per mille* of population, and 954 deaths were registered (484 males and 470 females), giving a death rate of 42 *per mille* of population. The death rates registered in the three largest towns were as follows:—Lahore 27 against 30 in the corresponding week of the previous year; Amritsar 43 against 35, and Multán 33 against 31.

There were 30 deaths recorded from cholera in Pánipat, 29 in Gujránwála, 21 in Ferozepore, 9 in Jagraon, 3 in Gujrát, 2 each in Jhajjar and Ambála, and 1 in Amritsar.

Sanitary Commissioner's Office,
Lahore:
*The 29th August* 1916.

Maize, 15½ seers. Bajra, 11½ seers. Prices between normal and warning rates or warning and scarcity rates. | Standing irrigated crops good and unirrigated average. Reaping of jowar and indigo commenced. | Ploughings continue, and sowings of toria and taramira commenced. |

## GENERAL REMARKS.

Fairly heavy rain has fallen in almost all the reporting districts, except in parts of the west, where the fall was light. It was beneficial to standing crops on higher lands. Standing crops are in good condition, but in parts of a few districts in the central tract maize and fodder have been damaged slightly by insects and in other tracts by excessive rains. Sowings of autumn crops completed, and are normal. Sowings of toria (*brassica campestris*) and taramira (*eruca sativa*) and ploughings for other spring crops continue, and are normal. Cattle are healthy and fodder is sufficient. Prices are generally stationary, and in case of wheat range between normal and warning and in other cases between normal and scarcity rates. Prices of wheat :—Lyallpur 10, Lahore 10¼, and Ambálá, Ferozepore and Ráwalpindi 10½ seers per rupee.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 26th August 1916, there were 1,260 births registered in the 38 large municipal towns (650 males and 610 females), giving a birth rate of 55 *per mille* of population, and 993 deaths were registered (505 males and 488 females), giving a death rate of 43 *per mille* of population. The death rates registered in the three largest towns were as follows :—Lahore 29 against 26 in the corresponding week of the previous year ; Amritsar 40 against 34, and Multán 24 against 23.

Of the 131 deaths from cholera, 81 were recorded in Pánipat, 13 in Gujránwála, 9 in Ferozepore, 5 each in Jullundur and Jagraon, 4 each in Karnal and Siálkot, 3 in Amritsar, 2 each in Jhajjar, Ludhiána and Gujrát and 1 in Multán. There was one death registered from small-pox in Shahabad. There were 4 deaths reported from plague in Ráwalpindi.

Harvesting of indigo and jowar to some extent commenced. Outturn average. | Preparations for, and sowings of, spring crops continue, and are average. |

## *GENERAL REMARKS.*

Except for slight showers in places weather was dry. In parts of the south-east rain is wanted for rice and other crops. Standing crops are in good condition, but maize and fodder have been damaged slightly by insects and by excessive rains in a few districts. Reaping of maize and jowar commenced in some south-eastern and western districts; yield normal. Sowings of toria (*brassica campestris*) and gram and ploughings for other spring crops in progress, and are normal. Cattle are in good condition, and fodder, and water for drinking and irrigation purposes sufficient. Prices are generally stationary, and in case of wheat range between normal and warning rates, and in other cases between normal and scarcity rates. Prices of wheat:—Lahore and Lyallpur 10, and Ambálá, Ferozepore and Ráwalpindi 10½ seers per rupee.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 2nd September 1916, there were 1,322 births registered in the 38 large municipal towns (68 males and 637 females), giving a birth rate of 58 *per mille* of population, and 1,048 deaths were registered (509 males an 539 females), giving a death rate of 46 *per mille* of population. The death rates registered in the three largest towns wer as follows :—Lahore 35 against 28 in the corresponding week of the previous year; Amritsar 48 against 35, and Multán 4 against 26.

Of the 85 deaths from cholera, 31 were recorded in Pánipat, 9 in Ferozepore, 7 in Jullundur, 5 each in Kasúr an Amritsar, 4 each in Karnál, Ludhiána and Siálkot, 3 each in Jagraon, Gujránwála and Gujrát, 2 each in Ambála an Wazírabad, and 1 each in Lahore, Lyallpur and Multán. There was 1 death registered from small-pox in Bhera. The were 4 deaths reported from plague in Ráwalpindi.

Sanitary Commissioner's Office, Lahore : *The 12th September* 1916.

Sowings above normal. |
| 14 | Multán ... | 0·03 at Lodhrán.<br>0·10 at Mailsi | 1. Green grass and to some extent bhusa available as fodder.<br>2. (b) Canals running with adequate supply.<br>3. Good. | Wheat, 10½ seers...<br>Gram, 12 seers.<br>Barley, 12½ seers.<br>Maize, 15 seers.<br>Bajra, 11½ seers.<br>Prices between normal and scarcity rates. | Standing crops on irrigated and normal on unirrigated areas. Harvesting of indigo continues with average outturn. | Breaking of land in progress. Sowings of gram and other crops in hand and are average. |

*GENERAL REMARKS.*

RAINFALL fairly heavy in the south-east and part of the submontane districts. Elsewhere it was light. Rain proved beneficial to standing crops and to the ploughings and sowings of spring crops. Standing crops are in good condition, but jowar and maize have been damaged slightly by insects in parts of a few districts. Reaping of jowar, bajra and maize continue in the south-east and in a few western districts. Yield expected to be normal. Sowings of gram and oilseeds and ploughings for other crops in progress and are normal. Cattle are in good condition, and fodder and water sufficient. Prices are stationary, but are falling slightly. In case of wheat they range between normal and warning rates, and in other cases between normal and scarcity rates. Prices of wheat :—Lahore 10 seers, and Ambála, Ferozepore, Lyallpur and Ráwalpindi 10½ seers per rupee.

MAHBUB SHAH, SUPDT.,

for *Director of Land Records, Punjab.*

(a) = Mean of 30 days.
*Not reduced to sea-level.
†Aneroid.

A vigorous monsoon prevailed in the east and north Punjab on most days between the 9th and the 22nd and occasioned widespread rainfall there. Some heavy falls occurred in the neighbourhood of Lahore and Sialkot : thus 11·30 inches were recorded at the Lahore Observatory during the interval between 8 hours of the 13th and the same hour of the 15th, and an equal amount at Sialkot between the 12th and the 15th. The normal fall for the month of July is 5·49″ at the former station and 7·88″ at the latter. The currents extended but seldom into the North-West Frontier Province and the south-west Punjab where merely local showers were recorded.

*Pressure and Winds.*—Barometric pressure was largely above normal. Winds varied irregularly from the normal in direction but were on the whole of average strength.

*Temperature.*—Mean temperature in the plains of the North-West Frontier Province and of the Punjab was appreciably higher than usual on the 1st and again from the 6th to the 9th, was below the average by 4° or more on the 11th, 14th to 16th, 19th, 20th, 22nd and 23rd, and was nearly normal on all other days. The highest maximum temperature recorded during the month was in the North-West Frontier Province 113½° at Peshawar and in the Punjab 112½° at Lyallpur and Montgomery. Considered over the whole month minimum temperature was very nearly normal almost everywhere, while the maximum was in defect by 5° at Lahore and Sialkot and by 3° at Ludhiána, Khushab and Murree.

The following table shows for each day of the month the departure from the normal of the mean temperature of the Punjab and the North-West Frontier Province, with the highest maximum temperature registered and the name of the station recording it :—

| Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. |

| " 31st ... | +0·8 | 107·3 | Do. |

*Humidity and Cloud.*—The air was considerably damper than usual in the north Punjab and at Cherat and Párachinar.

The cloud proportion was high in the Punjab and about normal in the North-West Frontier Province except at Párachinar where it was very low.

*Rainfall.*—Rainfall was very irregularly distributed over the Punjab : thus it was markedly in excess in the area defined by Ambála, Ludhiána, Lahore, Siálkot and also at Murree, was up to the average at Khushab and Ráwalpindi, and was decidedly below normal at the remaining meteorological stations. In the North-West Frontier Province the month's fall was below the normal everywhere except at Drosh ; the defect amounted to about 3" or 80 per cent. at Cherát where it was greatest.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 9th September 1916, there were 1,340 births registered in the 38 large municipal towns (710 males and 630 females), giving a birth rate of 58 *per mille* of population, and 1,043 deaths were registered (506 males and 537 females), giving a death rate of 45 *per mille* of population. The death rates registered in the three largest towns were as follows :—Lahore 41 against 24 in the corresponding week of the previous year; Amritsar 48 against 38, and Multán 38 against 25.

Of the 67 deaths from cholera, 12 were recorded in Siálkot, 8 in Kasúr, 7 in Ludhiána, 6 each in Jullundur and Amritsar, 4 each in Karnál, Pánipat and Gujránwála, 3 each in Jagraon, Lahore and Batála, 2 each in Hansi and Ferozepore, and 1 each in Wazírabad, Gujrát and Multán. There was 1 death registered from small-pox in Amritsar. There were 9 deaths reported from plague in Ráwalpindi.

Sanitary Commissioner's Office,
Lahore:
*The 19th September 1916.*

[Non-]rain-gauge station.
[Actual] rainfall.
[A]verages have been fixed.

MAHBUB SHAH, SUPERINTENDENT,
*Office of Director of Land Records, Punjab*

# Notes on the condition and prospects of crops, etc., in each district of the Punjab during the month of August 1916.

### 1.—Hissar District.

The rainfall is general and sufficient. Sowings of irrigated autumn crops finished : area sown normal. Standing crops in good condition. Cattle in good condition : green fodder is available. State of the public health good. Water supply in perennial and inundation canals sufficient. Grain stock sufficient for local requirements.

### 2.—Rohtak District.

Rainfall during the month above average. Sowings are being made throughout the district. Area sown is about average. Condition of standing crops generally fair to good. Yield of irrigated crops is expected to be normal and of unirrigated in parts of Rohtak Tahsil below normal. Condition of cattle is rapidly improving, green fodder is available. State of public health is generally good. Supply of water sufficient in village ponds. Price between normal and warning rates. Locusts appeared and did some damage. Young hoppers were destroyed.

### 3.—Gurgaon District.

Good rain fell throughout the district which greatly benefited the standing crops, which are in good condition. Yield is expected to be above average. Cattle now improving. Fodder scarce. Stocks have been exhausted, but green grass is plentiful. Health of the people good. Canal was generally closed, but no irrigation was needed. The Jamna flooded some villages of Ballabgarh, but caused no serious damage.

### 4.—Karnal District.

Rain general except in Kaithal and Thanesar Tahsils. Sowing of bajra, jowar, etc., completed. Ploughing for rabi commenced. Condition of crops good. Expected yield much above average if timely rains fall in September. Condition of cattle generally good. Jamna, Markanda and Amla, etc., overflowed damaging the kharif crops of the adjoining villages. Supply of canal water sufficient.

### 5.—Ambala District.

Rainfall above average. Sowings finished. Condition of standing crops is good. Yield of crops is expected to be good. Cattle are generally in good condition. Fodder (green) and water supply sufficient. Public health good. Westeren Jamna Canal flowed continuously, but irrigation was not needed. Prices stationary except of wheat which have risen.

### 6.—Simla District.

Rainfall sufficient. No sowings made. Condition of crops good. Condition of cattle good. Fodder and grazing sufficient. Public health good. Water in hill streams sufficient.

### 7.—Kangra District.

Rainfall generally below the average except at Nagar and Nurpur where it was above average. The rains proved very beneficial to the standing crops. No sowings were made. The condition and expected yield of standing crops are good. Cattle generally healthy. Public health is generally good. Water in kuhls and streams was sufficient for irrigation purposes.

### 8.—Hoshiarpur District.

Rainfall sufficient. No sowings were made during the month. Condition and expected yeild of standing crops good. Condition of cattle generally good. Fodder sufficient. Condition of public health generally good. Shah Nahr Canal was running during the month. Prices of food grains rising.

9.—JULLUNDUR DISTRICT.

Rainfall above average in Nikodar and Phillaur Tahsils and below average in Jullundur and Nawashahr Tahsils. Sowings of kharif crops completed and were normal. The condition of standing kharif crops is good. The condition of cattle is generally good. Fodder is sufficient. The state of the public health is generally good.

10.—LUDHIANA DISTRICT.

The rainfall was average in Ludhiana, and below average in Samrala and Jagraon Tahsils. The abundant rainfall of last month, however, was very beneficial to standing crops. Sowings of kharif crops completed. Condition of standing crops is good. Cattle healthy. Green grass and dry fodder available. Public health generally good. Irrigation from canals satisfactory. Storage of wheat and grains in progress.

11.—FEROZEPORE DISTRICT.

The rainfall was good and well distributed. Sowings of chari and other crops were made on a small unirrigated area, but were completed by the middle of the month. The rainfall benefited standing crops which are generally good. The cotton plant has in some villages grown to abnormal height and produce will be poor. The condition of the cattle is good. Green grass and fodder is available. The state of public health is generally good. The working of Sirhind and Grey Canals is satisfactory. The prices of wheat and gram are stationary ranging between warning and scarcity rates. The rabi ploughing continue on a large scale.

12.—LAHORE DISTRICT.

The rainfall has been very copious (rather heavy) and general, and in places have not allowed sufficient time for interculture of cotton and weeding of maize. Rice, maize, chari, bajra and til were sown on irrigated and mash, moth, etc., on unirrigated land, both above normal. The recent good falls will have a beneficial effect upon rabi sowings (toria, gram and masar). The condition of standing crops is quite satisfactory on the whole, though some damage has been caused to maize and jowar by borer (kiri). Some damage was also done to cotton, jowar and maize in low-lying tracts. Expected yield fair. Condition of cattle good, green fodder abundant; water in canals sufficient. Public health good. Both the perennial and inundation canals were flowing, fortunately enough the floods in the rivers, especially in the Sutlej, were not so heavy.

13.—AMRITSAR DISTRICT.

Rice, chari, maize and til were sown. Standing crops good. Crops on low-lying fields were damaged by excessive rains, and maize was damaged by insects. Expected yield good. Condition of cattle good. Public health is generally good. Canals are working by rotation. Ordinary flood in rivers Ravi and Beas.

14.—GURDASPUR DISTRICT.

The rain during the month was somewhat above the average and benefited the crops. Sowings completed. Standing crops good. Good yield is expected. Cattle generally in good condition. Fodder is sufficient. Public health generally good. Rivers and canals are in full flow. There were no heavy floods in both the rivers Ravi and Beas. Prices almost unchanged.

15.—SIALKOT DISTRICT.

Sowing of rice, maize, chari, bajra, til, etc., continued to a small extent on account of excessive rains. Condition of standing crops good. The expected yield is good. Cattle healthy. Dry fodder scarce, but green sufficient. Public health generally good. Irrigation from the Raya branch continued. The Chenab, Ravi, Pulkhu, Aik and Deg flooded and irrigated the adjoining lands.

16.—GUJRANWALA DISTRICT.

Good rain fell during the month all over the district. Rice, maize, jowar and mung were sown, but maize crop in tahsil Gujranwala and maize and jowar in tahsil Khangah Dogran has generally been affected by insect. Cotton and sugarcane in low-lying places have

suffered on account of excessive rains. The condition of cattle is generally good. Fodder and grazing were quite sufficient. Rabi ploughings in villages of tahsils Wazirabad and Hafizabad on the river side were much helped by the inundations from the Chenab river, though the crops of a few villages suffered to some extent.

17.—GUJRAT DISTRICT.

Rainfall has been excessive and has caused much damage in low-lying lands where the yield of all crops will be injuriously affected. Cattle in good condition and green fodder ample. Rabi ploughings not possible owing to continued wet weather.

18—SHAHPUR DISTRICT.

There has been sufficient rain throughout the district. Sowings of toria begun in Sargodha Tahsil, while the sowings of kharif crops are in progress in Khushab Tahsil. Sugarcane in good condition. Cotton crop is flowering in Shahpur Tahsil, but is reported to have been damaged by bollworm in Sargodha Tahsil, and by excessive rains in Bhera Tahsil. Maize, jowar and chari crops were also damaged by the rains. The outturn is expected to be good. The cattle are on good condition. Fodder is sufficient. The state of public health is good. Lower Jhulum Canal was closed for some days owing to excessive rains, but the inundation canals continued to run with sufficient supply of water.

19.—JHELUM DISTRICT.

The very heavy rain during the month has been beneficial to crops on high lands, but has injured those on riverain and low-lying areas where they have been damaged by floods. Standing crops are on the whole in fairly good condition. Cattle healthy. Green grass and fodder generally plentiful. Public health good.

20.—RAWALPINDI DISTRICT.

Rainfall continued unabated throughout the month. Sowings of *taramira* have commenced in places. The continuous rains are damaging jowar and bajra ears. Cattle are in excellent condition, green fodder ample.

21.—ATTOCK DISTRICT.

Rainfall during the month is about double the average, and sowings of kharif crops have been completed. The condition of crop is good. Water abundant. Public health good. Prices have fallen slightly. Several bands have been washed away by floods.

22.—MIANWALI DISTRICT.

Bajra, jowar, etc., sown during the month. Standing kharif crops and their expected yield average to good. Cattle in good condition. Fodder available. Public health good. In the Bhakkar Tahsil the river floods watered lands in the kucha and pakka assessment circles. There is sufficient water in the Kurram Canals in Isa Khel Tahsil.

23.—MONTGOMERY DISTRICT.

Til, toria maize and jowar sowings continued during the month. Cndition of standing crops is good. Maize and jowar crops in Montgomery and Gugera Tahsils attacked by worms Public health is good. Rivers and canals are flowing well. The price of grain is rising.

24.—LYALLPUR DISTRICT.

Rain sufficient. Chari, maize, jowar and rice sowings finished. Sowings are above normal, owing to timely and sufficient rain. Toria sowings commenced. Standing crops are good; maize in the Lyallpur Tahsil has been slightly dama_ed by pest in some villages. Cattle generally good. Public health generally good. The canal has been working by rotational closures. There were floods in the Ravi and Nala Deg.

25.—JHANG DISTRICT.

Rainfall above the average. Jowar, bajra, maize, toria, til, chari, etc., are being sown. Crops sown along the river in Shorkot Tahsil washed away. Green bhusa and fodder available Canals flowing. Inundations from the Chenab and Jhelum benefited sailab lands. Public health good.

26.—MULTAN DISTRICT.

The rainfall was sufficient and will prove useful to the standing crops ; and the breaking of land for rabi crops. Sowings of til, china, maize, bajra and jowar in progress. Conditions of crops on irrigated areas good and on unirrigated areas normal due to floods and heavy rains. Condition of cattle good. Bhusa, jowar and spontaneous grass available as fodder. Public health good. All inundation canals and Sidhnai Canal flowing with adequate water. Prices of food grains rising.

27.—MUZAFFARGARH DISTRICT.

The unusually heavy rainfall during the month has resulted in damage to crops in certain places. Til, jowar and bajra were sown during the month. Conditions of crops above average on the whole. Public health generally good. Unusual floods and excessive canal water caused damage to crops at some places. Prices of food grains rising.

28.—DERA GHAZI KHAN DISTRICT.

The rainfall has been much above the average, and has done much good to the standing crops. The kharif crops are in a very satisfactory condition. The condition of cattle good. Public health good. Canals are working well. There have been moderate flood in the river. Prices are stationary.

Good. | Wheat, 10½ seers...<br>Gram, 12½ seers.<br>Barley, 13½ seers.<br>Maize, 15½ seers.<br>Bajra, 13½ seers.<br>Prices between normal and scarcity rates. | Standing crops good on irrigated area and normal on unirrigated area. Indigo being harvested. Outturn average. | Ploughings for wheat and sowings of gram and other crops in progress and are average. |

## GENERAL REMARKS.

RAINFALL fairly moderate in the south-east and parts of the sub-montane tract and was beneficial. Scattered showers were also re[illegible]ved in parts of a few central districts. Standing crops are in good condition generally. Picking of cotton and reaping of millets and maize in progress. Yield is expected to be normal to good. Sowing of gram, barley and oilseeds and ploughing of other spring crops continue, and are normal. Cattle are in good condition, and fodder and water for drinking and irrigation sufficient. Prices are generally stationary, but are falling gradually. In case of wheat they range between normal and warning rates, and in other cases between normal and scarcity rates. Prices of wheat :—Ambála, Ferozepore, Lahore and Ráwalpindi 10½, and Lyallpur 11 seers per rupee.

Strongly marked monsoon conditions prevailed during the second and third weeks of the month, chiefly in the East and North Punjab, and some heavy
12th; and an equal amount at Siálkot from the 12th to the 15th. The normal fall for the whole month of July is 5·49 inches at the former station and 7·88 inches

The rainfall of the month was unevenly distributed: it was markedly in excess in the area defined by Ambála, Ludhiána, Lahore and Siálkot, and also at Murree

Compared with the figures for the corresponding month of the previous year, there was an increase of 10,597 births or 6·76 *per mille* of population which
was 8·00 *per mille* of population, and every division in the Province shared in it. The increase was most marked in the Lahore Division, where it was 11·48.

There was an increase of 869 deaths compared with the figures for the corresponding month of the previous year, yielding a rate of 0·56 per 1,000 of population

As compared with the death rate for the previous month there was a decrease of 2·55 *per mille*. The diminution was shared by all the divisions in the Province, and

There were 183 deaths (including 24 in towns) from cholera during the month under report as against 2,141 in the same month of the previous year and 33

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 23rd September 1916, there were 1,399 births registered in the 37 large municipal towns (731 males and 668 females), giving a birth rate of 62 *per mille* of population, and 1,141 deaths were registered (560 males and 581 females), giving a death rate of 50 *per mille* of population. The death rates registered in the three largest towns were as follows :—Lahore 53 against 24 in the corresponding week of the previous year, Amritsar 53 against 26, and Multán 36 against 29.

Of the 51 deaths from cholera, 11 were recorded in Lahore, 7 each in Hánsi and Amritsar, 6 in Rewári, 4 each in Siálkot and Ráwalpindi, 3 in Gujrát, 2 each in Jhajjar and Ludhiána, and 1 each in Karnál, Jullundur, Jagraon, Kasúr and Batala. There were 2 death registered from small-pox (*viz.*, 1 each in Pánipat and Amritsar). There were 33 deaths reported from plague in Ráwalpindi.

Sanitary Commissioner's Office,
Lahore :
*The 4th October* 1916.

Harvesting of indigo, jowar and bajra continue. Outturn normal. | Preparations for wheat and sowings of gram and other crops continue, and are average. |

*GENERAL REMARKS.*

Light or moderate rain was received in parts of all the reporting districts. It was heavy in parts of a few south-eastern and sub-montane districts. Rain was generally beneficial to standing autumn crops and to the sowing of spring crops. Standing crops are in good condition. Picking of cotton and reaping and harvesting of millets and maize in progress. Outturn is normal to good. Sowing of gram, barley and oilseeds continue, and of wheat commenced in a few districts, and are generally normal. Cattle are healthy, and fodder and water for drinking and irrigation sufficient. Prices are generally stationary, but have a slight downward tendency. In case of wheat they range between normal and warning rates, and in other cases between normal and scarcity rates. Prices of wheat :—Ambála, Ferozepore, Lahore, Ráwalpindi and Lyallpur 10½ seers per rupee.

| 14 | Multán ... | ... | 1. Available ... 2. (b) Sidhnai Canal flowing; supply usual. Inundation canals dry. 3. Good. | Wheat, 10½ ... Barley, 13½. Gram, 13. Bajra, 13½. Maize, 15½. Prices generally between normal and warning rates. | Standing crops goods on irrigated area and average on unirrigated area. Harvesting of indigo, jowar and bajra continue. Outturn normal. | Sowings of gram, peas, &c., in progress, and are average. |

*GENERAL REMARKS.*

No rain of importance. Standing autumn crops are in good condition. Picking of cotton and harvesting of rice, millets and maize in progress. Outturn normal to good. Sowings of gram, barley, toria and other oilseeds continue, and of wheat commenced in certain western districts. Extent of sowings is normal. Germination of crops sown is good. Condition of cattle is good, and fodder and water for drinking and irrigation purposes are sufficient. Prices are stationary, but falling, and range generally between normal and warning rates. Those of autumn food-grains have in some cases fallen at below normal rates. Prices of wheat :—Lahore 10, Ambála, Ferozepore and Ráwalpindi 10½, and Lyallpur 11 seers per rupee.

MAHBUB SHAH, Supdt.,

(a) = Mean of 30 days.

*Not reduced to sea-level.

(b) Aneroid.

The monsoon was unusually active over both the Punjab and the North-West Frontier Province, and although widespread rain fell only on a few days in the month, local falls were of frequent occurrence and were in some places very heavy.

*Pressure and Winds.*—Barometric pressure was well above the normal. Winds in the Punjab were on the whole of about average strength, but were somewhat more easterly than usual.

*Temperature.*—On most days temperature in the plains of the Punjab and of the North-West Frontier Province was inclined to be low; the defect was not, however, large except on the 2nd, 3rd, 7th to the 9th, the 14th, 17th and the 21st when it equalled or exceeded 5° in amount. The highest maximum temperature observed during the month was 10[illegible] recorded at Multán on the afternoon of the 1st. Considered over the whole month maximum temperature was below the normal at all the recording stations with the exception of Ambala, Simla and Drosh, where it was practically normal; the defect amounted to 6° at Dera Ismáil Khan and 7° at Khushab and Cherát. Minimum temperature on the other hand corresponded closely with the average at the majority of stations.

The following table shows for each day of the month the departure from the normal of the mean temperature of the Punjab and the North-West Frontier Province, with the highest temperature registered and the name of the station recording it :—

| Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. | Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. |

*Humidity and Cloud.*—Weather was unusually damp and cloudy except in the north-eastern districts of the Punjab.

*Rainfall.*—In the Punjab the total rainfall of the month was markedly in defect at Simla and Siálkot, was about the average at Ludhiána and Lahore, and was more or less in excess at the remaining meteorological stations. It was unusually heavy at Hissar, Montgomery, Lyallpur, Ráwalpindi and Murree, where the recorded amounts were two to three times the normal. In the North-West Frontier Province the fall was unusually abundant except at Drosh where weather was drier even than usual ; the excess amounted to upwards of 2″ or 109 per cent. at Dera Ismáil Khan, 8″ or 422 per cent. at Pesháwar and 7″ or 165 per cent. at Cherat.

The following table gives the rainfall data for the Punjab and the North-West Frontier Province stations for August 1916 :—

| Station. | Actual rainfall in August 1916. | Normal rainfall in August. | Departure from normal in August 1916. | Station. | Actual rainfall in August 1916. | Normal rainfall in August | Departure from normal in August 1916. |

MAHBUB SHAH, SUPERINTENDENT,
*Office of Director of Land Records, Punjab*

# Notes on the condition and prospects of crops, etc., in each district of the Punjab during the month of September 1916.

## 1.—Hissar District.

Rainfall is general and sufficient. Gram and oilseeds being sown in unirrigated tracts on a narrow scale. Irrigated area is being ploughed for wheat and mixed crops. Standing crops in good condition. Cotton picking in some villages commenced. Jowar and bajra being reaped. Outturn one rupee. Cattle in good condition. Green grass available. Public health good. Water-supply in inundation and perennial canals sufficient. Grain stock sufficient for local requirements. Prices rather falling.

## 2.—Rohtak District.

Rainfall during the month generally above the average and most beneficial. Sowings of gram and rapeseed continued. Area sown is yet below normal. Germination is good. Standing crops generally in good condition. Yield of fodder is normal, and of millets in Rohtak and Gohána Tahsils average and in tahsils Jhajjar and Sonepat good. Condition of cattle very fair. Supply of fodder and water adequate. Health of people good. Canals remained closed. Prices between normal and warning rates. General condition satisfactory.

## 3.—Gurgaon District.

Good rain fell throughout the district. It damaged the standing crops in low-lying tracts to some extent, but was beneficial for the rabi crop. Condition of the standing crop is generally good. Bajra has been damaged to some extent. Yield of standing crops is expected to be above average. Cattle in good condition. Green grass plentiful. Health of people good. Canal was generally closed, but irrigation was not needed. No hill torrents.

## 4.—Karnal District.

Rain general and beneficial for kharif crops and rabi sowings Sowing of gram, toria and mustard in hand. First cotton flower damaged. Jowar and chari also affected to some extent. Sugarcane and pulses in good condition. Expected yield much above average. Fodder and water sufficient. Slight damage done by overflow of Jamna and Markanda. Crops on the Sarusti Nadi excellent, and prospects for rabi good.

## 5.—Ambala District.

Rainfall sufficient and beneficial to rabi sowings, which are in progress. Condition of standing crops is good. Gram, sarshaf and linseed are germinating well. Yield of maize and china average, and of other crops expected to be good. Cattle generally are in good condition. Fodder (green) and water-supply sufficient. Public health good. Western Jamna Canal flowed continuously, but no lands were irrigated. Prices stationary.

## 6.—Simla District.

Rainfall in both tahsils sufficient. No sowings made. Condition of crops in Simla Tahsil is good and in Kot Khai Tahsil below the average. Condition of cattle good. Fodder and grazing sufficient. Public health good. Water in hill streams sufficient.

## 7.—Kangra District.

Rainfall was generally below the average. A small area was sown with oilseeds, gram and barley. The condition of standing crop is generally good. The yield of rice is expected to be good and that of other crops fair. Cattle are in good condition. Public health is generally good. Water in kuhls was sufficient for irrigation purposes.

## 8.—Hoshiarpur District.

Rainfall sufficient. Gram, mustard and toria sown to some extent. The kharif harvest is being reaped. Condition of standing crops good. Expected yield average. Condition of cattle generally good. State of public health generally good. Shah Nahr Canal continued to flow during the month. Prices of food-grains stationary.

## 9.—Jullundur District.

Rainfall above average in all tahsils, except Jullundur, where it is somewhat below average, and has benefited the standing crops. Lands are being prepared for rabi sowings to normal extent. Sowings of gram commenced in Phillaur Tahsil, and are normal. The condition of standing kharif crops is good. The condition of cattle is generally good. Fodder sufficient. Public health is good.

10.—LUDHIANA DISTRICT.

Rainfall in Jagraon and Ludhiana Tahsils above average and in Samrala Tahsil below average, and has much benefited the standing crops. Sowings of gram and sarshaf commenced. Condition of kharif crops good. Condition of cattle satisfactory. Green grass and fodder available. Public health generally good. Irrigation from canals satisfactory. No inundation reported.

11.—FEROZEPORE DISTRICT.

Weather remained dry in Ferozepore City, Nathána and Abohar. Elsewhere rain was sufficient. It did much good to standing crops. Rabi ploughings continued. The condition of crops is generally good, but in Muktsar and Ferozepore Tahsils maize and chari crops are reported to have been damaged by insects. The condition of cattle is good. Green grass and fodder are available. The state of public health is generally good. The working of Sirhind Canal is satisfactory. No flood reported. The prices of wheat are stationary, but those of gram show a little fall.

12.—LAHORE DISTRICT.

The sowing on irrigated lands is yet below normal and on irrigated normal. Condition of sugarcane cotton and rice are fair. Maize and jawar much below normal on irrigated lands. Unirrigated bajra and til exceptionally good. Outturn of rice above normal and that of cotton only normal. Condition of cattle good. Fodder and pasture sufficient. Generally the health of people is good. Water in canals (both inundation and perennial) adequate.

13.—AMRITSAR DISTRICT.

Toria and gram is being sown. The condition and expected yield of standing crops good. Condition of cattle good. Public health is generally good. Canals are working by rotation; supply adequate.

14.—GURDASPUR DISTRICT.

The rainfall during the month was average which benefited the crops. No sowings were made. Standing crops in good condition. Maize and sawank were harvested during the month; their outturn is good. Picking of cotton commenced. Cattle generally in good condition. Fodder is sufficient. Public health generally good. Rivers and canals have sufficient water. There were no heavy floods in both the Ravi and Beas rivers. Prices almost stationary.

15.—SIALKOT DISTRICT.

Sowings of toria, gram, massar and green vegetables are above normal and in time. Condition of standing crops is good. Expected yield good. Cattle are healthy. Dry fodder scarce, but green sufficient. Irrigation from Raya Branch continued. Water sufficient. Chenab and Ravi rivers flooded.

16.—GUJRANWALA DISTRICT.

There was fair rainfall during this month which benefited the crops. Sowings of sarshaf, gram and turnips were in progress. Maize and jawar have been damaged by keri in Tahsils Gujránwála and Khángah Dográn. Sugarcane and cotton in some places in low lands, and especially in Chenab circle of Tahsils Hafizabad and Wazirabad, were damaged by heavy rains and floods in Chenab river. Otherwise the general condition of crops is fair. The state of cattle is generally good, and fodder sufficient. Supply of canal water sufficient.

17.—GUJRAT DISTRICT.

Rain was hardly needed for the kharif crops, but was beneficial for rabi sowings. Gram, turnips and some oilseed crops are being sown, and ploughing for rabi crops is in progress. Condition of sugarcane is very good, and that of bajra and rice is generally good, and of other crops below average. Chari and jawar suffered considerably from excessive rains, as also cotton on low-lying ground. Yield expected to be below average on account of excessive rain and overgrowth of grass. Cattle are generally in good condition. Fodder is sufficient.

18.—Shahpur District.

Rainfall benefited the standing crops generally. Toria, turnips and gram sown to a normal extent. Condition of standing crops good, except that of maize, jawar and chari, which is bad in Bhera and Shahpur Tahsils. Condition of cotton was also bad in Bhera Tahsil, but is improving by heat of the sun. Rice, maize and bajra being harvested. Outturn normal. Cattle in good condition. Fodder sufficient. The state of public health is generally good. Lower Jhelum Canal continued to flow with sufficient supply of water. Inundation canals flowed for some days in the beginning of the month, but closed afterwards.

19.—Jhelum District.

Rain sufficient to allow sowings of taramira and gram in Jhelum and Chakwál Tahsils Standing crops in good condition. Cattle in good condition. Fodder sufficient. Prices generally stationary.

20.—Rawalpindi District.

Rainfall above average in Gujar Khan and Kahúta Tahsils, and below average in Ráwalpindi and Murree Tahsils. Rapeseed, gram and massar being sown. Kharif crops in good condition. Expected yield good. Condition of cattle good. Green fodder plentiful. Public health good. Prospects of rabi distinctly good.

21.—Attock District.

Rainfall about average. Sowings of gram and oilseeds have been commenced. Standing crops good. Late sown crops want some more rains. A fairly good crop is expected. Condition of cattle fairly good. Public health good. Water sufficient. Prices slightly lower.

22.—Mianwali District.

Gram, peas, massar, turnip, &c., are being sown on unirrigated lands. Condition of expected yield of kharif crops average to good. Crops have been damaged by spill water in the riverain tract. Cattle in good condition. Nammal Canal working satisfactorily. Kurrum Canals are still closed owing to the silt clearance. The spill water from the Indus did some damage. The hill torrents watered a large area for kharif and rabi crops.

23.—Montgomery District.

Some turnips, gram and toria have been sown during the month. Condition of standing crops is good, although barani crops at some places have begun to suffer for want of rain Yield is expected to be good. Condition of cattle is good. General health is good on the whole. The rivers have a normal supply of water. The Lower Bari Doab Canal is flowing full. The Sutlej Inundation Canals ran fairly well during the month.

24.—Lyallpur District.

There has been rain in all the tahsils. Jaranwála had again heavy showers. Sowings of toria, gram and turnips were in progress. The standing crops are all in good condition. Picking of country cotton commenced. Cattle are generally good. Fodder sufficient all over the district. Public health generally good. Canal water satisfactory. The Ravi was in flood in the beginning of September. Stock of food-grains sufficient.

25.—Jhang District.

Rain in the Chiniot Tahsil above average, and in the rest of the district below average. Sowings of kharif crops and toria (*brassica campestris*) were completed, and gram and turnips are being sown. The crops are in good condition in Shorkot and Jhang. In Chiniot they are fair. Insects have attacked the crops in the Chiniot Tahsil. Yield is expected to be average. Cattle generally healthy. Green and dry fodder available in sufficient quantity. Public health generally good. Canals flowing. No river inundation during the month. Prices stationary, with the exception of the prices of maize and jawar, which have become cheaper.

26.—Multan District.

Rain in the month was insignificant. The sowings of turnips, peas, gram and taramira was normal. Condition of standing crops good on irrigated areas and average on unirrigated areas. Outturn of indigo was average, and that of sanwak and kangni below average. Condition of cattle good. Bhusa to some extent and green grass of chari, maize available as fodder. Bhusa decreasing in stock. Public health fair. Sidhnai flowing with adequate water, and other inundation canals running by turn. Prices of food-grains generally rising.

27.—MUZAFFARGARH DISTRICT.

No rainfall at Alípur during the month. The rainfall in the remaining three tahsils was very useful to standing crops. Gram, turnips, peas and rapeseed were sown. Condition of crops average in Sinánwan and Leiah, and good in the remaining two tahsils. Rice and indigo harvested. Average outturn per acre of rice estimated to be about 10 maunds, and that of indigo about 12½ seers. Public health good in Alípur. Condition of cattle good on the whole. Fodder available. Canal water-supply sufficient. Prices of food-grains still high.

28.—DERA GHAZI KHAN.

The rainfall during the month about average, and has done good to the standing crops. Sowings of rapeseed and gram are in progress. The standing crops are in a satisfactory condition. Expected yield average to good. Condition of cattle good. Fodder abundant. There were slight floods in river. Prices are stationary.

Well marked monsoon conditions prevailed over the province during the greater part of the month, and the month's total rainfall was normal or in excess at all the record
…ndi, Hissar, Lyallpur and Montgomery, being two to three times the normal amount.

Both humidity and cloud were generally above the average, while temperature was between 2° and 4° in defect at Hissar, Montgomery, Lahore, Siálkot, Khushāb

Compared with the corresponding month of the previous year there was an increase of 5,778 births or 3·69 *per mille* of population which was noticed throughout the
population. The excess was shared by all the divisions in the province but was well marked (5·21) in the Ambálla Division.

Compared with the rate for the corresponding month of the previous year there was an increase of 6,697 deaths or 4·27 *per mille* of population which was shared by
…ad of fevers. As compared with the death rate of the previous month there was an increase of 1·40 per 1,000 which was shared by all the divisions in the province except

There were 657 deaths (including 351 which occurred in towns) from cholera during the month under report as against 1,796 in the corresponding month of the

Prices generally between normal and warning rates. | Condition of standing crops good. Yield of maize, cotton and rice normal. | Sowings wheat, barley, gram and other crops continue. |

| No. | Reporting station. | Rain. | 1. Supply of fodder. 2. Water-supply for— (a) Drinking. (b) Canal irrigation. 3. Condition of cattle. | Prices in seers per rupee. | Prospects of — Autumn. | Prospects of — Spring. |
|---|---|---|---|---|---|---|
| 10 | Shahpur ... | ... | 1. Sufficient ... 2. (b) Lower Jhelum flowing; supply sufficient. | Wheat, 10 to 11. Gram, 12 to 13. Bajra, 13 to 16. Maize, 14 to 16. Prices generally between normal and warning rates. | Condition of crops normal to good. Picking of cotton and harvesting of bajra and maize continue. Outturn normal to good. | Sowings of wheat and barley commenced and of irrigated gram completed. |
| 11 | Ráwalpindi ... | ... | 1. Sufficient ... 3. Good. | Wheat, $10\frac{1}{4}$ ... Barley, 16. Gram, $12\frac{1}{4}$. Bajra, 13. Maize, $14\frac{1}{2}$ to 17. Prices between normal and warning rates. | Standing crops good. Harvesting of bajra and reaping of other crops continue. Outturn of bajra good. | Sowings continue, and are timely and normal. |
| 12 | Miánwáli ... | ... | 1. Procurable ... 2. (a) Do. (b) Canals working; supply sufficient. 3. Good. | Wheat, $10\frac{1}{2}$ ... Barley, 14. Gram, 13. Bajra, 14. Prices between normal and scarcity rates. | Standing crops average to good. | Sowings of wheat, gram and barley, etc., continue and are above normal and timely. Season favourable. |
| 13 | Lyallpur ... | ... | 1. Sufficient ... 2. (b) Canals working by rotation; supply normal. 3. Good. | Wheat, $10\frac{9}{16}$ ... Gram, $13\frac{7}{16}$. Maize, $18\frac{1}{4}$. Jowar, 20. Prices between normal and warning or at below normal rates. | Standing crops good. Picking of cotton continued. | Sowings of gram finished. Wheat being sown. Rabi sowings normal. |
| 14 | Multán ... | ... | 1. Available ... 2. (b) Sidhnai Canal flowing; supply sufficient. Inundation canals dry. 3. Good. | Wheat, $10\frac{1}{4}$ ... Barley, 15. Gram, 13. Bajra, $13\frac{3}{4}$. Maize, 16. Prices between normal and warning rates. | Standing crops good on irrigated area and average on unirrigated area. Harvesting continues. Outturn average. | Sowings of wheat, barley and gram in progress and are normal. |

## GENERAL REMARKS.

WEATHER dry. Standing autumn crops are generally in good condition. Picking of cotton and harvesting of rice, millets and maize are in progress. Outturn normal to good. Sowings of wheat, barley, gram and oil-seeds continue, and are normal. Germin[illegible]n is good. Condition of cattle is good, and fodder and water for drinking and irrigation purposes are sufficient. Prices are stationary, but have a slight downward tendency. They range generally between normal and warning rates. Those of autumn food-grains have in some cases fallen at below normal rates. Prices of wheat :—Lahore 10, Ambála, Ferozepore and Ráwalpindi $10\frac{1}{4}$, and Lyallpur $10\frac{9}{16}$ seers per rupee.

Prices between normal and warning rates. | Standing crops good on irrigated area and average on unirrigated area. Harvesting of rice and bajra and picking of cotton continue. Outturn average. | Sowings of wheat, barley, gram, etc., continue and are normal. |

*GENERAL REMARKS.*

WEATHER remained dry. Picking of cotton and harvesting of rice, millets and maize in progress. Outturn normal to good. Standing cotton and sugarcane crops good. Sowings of wheat, barley, gram and oil-seeds continue, and are normal or above normal. Crops are germinating well. Cattle are healthy and fodder and water for drinking and irrigation purpose sufficient. Prices of wheat have risen slightly. Generally prices range between normal and warning rates. Those of autumn food-grains have in some cases fallen at below normal rates. Prices of wheat :—Lahore 9¾, Lyallpur 10, Ferozepore and Ráwalpindi 10½, and Ambála, 10¾ seers per rupee.

| 7 | Lahore ... | .. | 1. Sufficient ... 2. (a) Do. (b) Perennial canals flowing; supply sufficient. 3. Average. | Wheat, 9½ ... Gram, 12¼. Prices of wheat between normal and warning rates and of gram between warning and scarcity rates. | Condition of sugarcane good and of cotton average. Yield of cotton normal, and of sugarcane, til and bajra good. | Sowings of wheat, barley and gram continue, and are above normal on unirrigated area and normal on irrigated area. Germination fair. |
| 8 | Amritsar ... | ... | 1. Sufficient ... 2. (b) Canals working by rotation; supply adequate. 3. Good. | Wheat, 11 ... Gram, 12¾. Barley, 14½. Jowar, 22. Maize, 15½. Prices generally between normal and warning rates. | Standing crops good. Reaping of rice and maize and picking of cotton in progress. Outturn of rice good, of cotton normal and of maize slightly below normal. | Sowings of wheat, gram and rapeseed continue, and are normal. Germination good. |
| 9 | Siálkot ... | ... | 1. Sufficient ... 2. (a) Do. (b) Canal closed. 3. Good. | Wheat, 10 to 11 ... Barley, 13 to 14. Maize, 14½ to 15. Gram, 12 to 12¼. Prices generally between normal and warning rates. | Condition of sugarcane and cotton good Yield of rice good, and of maize, cotton, bajra, &c., normal. | Rain wanted. Sowings of wheat, barley, &c., continue. Germination good. |

| No. | Reporting station. | Rain. | 1. Supply of fodder. 2. Water-supply for— (a) Drinking. (b) Canal irrigation. 3. Condition of cattle. | Prices in seers per rupee. | Prospects of Autumn. | Prospects of Spring. |
|---|---|---|---|---|---|---|
| 10 | Shahpur ... | ... | 1. Sufficient ... 2. (b) Lower Jhelum Canal flowing; supply sufficient. 3. Good. | Wheat, 9¾ to 11... Maize, 15 to 16. Bajra, 13½ to 16. Gram, 12 to 13½. Prices generally between normal and warning rates. | Condition of standing crops average to good. Picking of cotton and harvesting of maize, bajra and rice in progress. Outturn normal to good. | Sowings of wheat and barley continue and of gram finished and are above normal. Germination generally good. |
| 11 | Ráwalpindi ... | 0·29 at Murree ... | 1. Sufficient ... 3. Good. | Wheat, 10½ ... Barley, 15¼. Gram, 12½. Bajra, 13¼. Maize, 14¼ to 17. Prices between normal and warning rates. | Crops being harvested. Yield of bajra good and of other crops below normal. | Sowings completed and are above normal. Germination good. |
| 12 | Miánwáli ... | ... | 1. Procurable ... 2. (a) Do. (b) Canals working; supply sufficient. 3. Good. | Wheat, 10 ... Barley, 14. Gram, 13. Bajra, 13¼. Prices between normal and scarcity rates. | Outturn of autumn crops normal to good. | Sowings continue and are above normal. Prospects average to good. |
| 13 | Lyallpur ... | ... | 1. Dry fodder sufficient; green insufficient. 2. (b) Canals working by rotation; supply normal. 3. Generally good. | Wheat, 10 ... Gram, 12½. Maize, 18. Prices of wheat and gram between normal and warning rates and of maize at below normal rate. | Standing crops good. Picking of cotton and pressing of sugarcane continue. Yield of cotton normal. | Sowings of wheat in progress and are normal. |
| 14 | Multán ... | ... | 1. Available ... 2. (b) Sidhnái Canal flowing. Some inundation canals also flowing by turn. 3. Good. | Wheat, 10 ... Barley, 12¼. Gram, 12¼. Bajra, 13½. Maize, 16. Prices generally between normal and warning rates. | Standing irrigated crops good and unirrigated average. Harvesting of bajra and rice and picking of cotton continue. Outturn normal. | Sowings of wheat, barley and rape-seed continue and are normal. Germination good. |

## *GENERAL REMARKS.*

WEATHER remained dry. Picking of cotton and harvesting of rice, maize, etc., continue. Outturn is generally normal to good. Standing cotton, sugarcane and other crops are in good condition. Sowings of gram finished in some districts and of wheat, barley and oil-seeds, etc., are in progress. Area sown is normal or above normal. Germination of crops sown good. Cattle are healthy and fodder and water for drinking and irrigation purposes sufficient. Prices of wheat and other grains have risen slightly in some districts, but still range between normal and warning rates. Those of autumn food-grains are in some cases below normal rates. Stocks of food-grains are sufficient. Prices of wheat :—Lahore 9½, Lyallpur 10, Ferozepore 10½, and Ambála and Ráwalpindi, 10½ seers per rupee.

D. J. BOYD,

*Director of Land Records, Punjab*

# SUMMARY OF METEOROLOGICAL CONDITIONS PREVAILING OVER THE PUNJAB AND THE NORTH-WEST FRONTIER PROVINCE DURING SEPTEMBER 1916.

| Station. | Pressure. Barometer at 8 hrs. reduced to 32°, to constant gravity at 45° Lat. and to sea level. | Pressure. Departure from normal. | Wind. (a)-Aneroid.

*Not reduced to sea-level.

In the Punjab the monsoon was weak except in the south-east, and it failed altogether to penetrate into the south-western districts. As a rule the final withdrawal of the monsoon currents from the Punjab takes place about the middle of the month, but this year this event did not occur until the 6th of October.

*Pressure and Winds.*—Barometric pressure was on the mean of the month in decided defect everywhere. Winds over the Punjab were on the whole of about normal velocity but contained an abnormally strong easterly element, while in the North-West Frontier Province the rate of movement was low and the wester component in the mean direction was either altogether absent or weaker than usual.

*Temperature.*—Mean temperature over the Punjab and the North-West Frontier Province was within 3° of the normal throughout the month except from the 3rd to the 6th and on the 19th, when it was about 4° below the average. Considered over the whole month maximum temperature was in defect by 3° to 4° at Hissar, Lahore, Siálkot, Dera Ismail Khan and Cherát, while the minimum was very nearly normal everywhere.

The following table shows for each day of the month the departure from the normal of the mean temperature of the Punjab and the North-West Frontier Province, with the highest temperature registered and the name of the station recording it :—

| Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. | Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. |

| " 16th ... | −2·0 | 97·5 | Do. | | | | |

*Humidity and Cloud.*—In the Punjab both humidity and cloud exceeded the normal ; but in the North-West Frontier Province although humidity was high the quantity of cloud was about the average.

*Rainfall.*—In the Punjab the month's rainfall was deficient except at Hissar, Ambâla, Simla, Ludhiána and Siálkot. The deficiency amounted to 4¾″ at Murree and about 1½″ at Lahore, Lyallpur and Montgomery ; the month was rainless at the last named station and also at Multán. In the North-West Frontier Province the month's fall was above normal at the stations in the plains and below it in the hills.

The following table gives the rainfall data for the Punjab and the North-West Frontier Province stations for September 1916 :—

| Station. | Actual rainfall in September 1916. | Normal rainfall in September. | Departure from normal in September 1916. | Station. | Actual rainfall in September 1916. | Normal rainfall in September. | Departure from normal in September 1916. |

The monsoon was weak except in the south-east of the province, and it failed to penetrate into the south-western districts. In general the air was damper and the sky

Compared with the corresponding month of the previous year there was an increase of 4,232 births or 2·80 *per mille* of population which was share ncrease of 2·83 per 1,000 of population which was general throughout the province but most marked (5·10) in the Lahore Division.

There was an increase of 19,140 deaths or 12·63 *per mille* as compared with the death rate for the corresponding month of the previous year which affected all the divisio eal of fevers.

As compared with the death rate for the previous month there was an increase of 7·52 per 1,000 of population which was noticed in every division in the province and nder the head of fevers.

There were 546 deaths (including 172 which occurred in towns) from cholera during the month as against 331 in the corresponding month of the previous year

SANITARY COMMISSIONER'S OFFICE, LAHORE:
*The 14th November* 1916.

| 14 | Multán ... | ... | 1. Available ... 2. (b) Sidhnái Canal flowing. Some inundation canals also flowing by turn. 3. Good. | Wheat, 10 ... Barley, 12½. Gram, 12. Bajra, 13½. Maize, 16. Prices generally between normal and warning rates. | Standing irrigated crops good and unirrigated average. Picking of cotton and harvesting of rice and bajra continue. Yield normal. | Sowings of wheat and barley continue and are normal. Condition of standing crops good. |

## GENERAL REMARKS.

WEATHER remained dry. Picking of cotton and harvesting of rice and maize, &c., continue. Pressing of sugarcane has commenced in some districts. Outturn of these crops is generally normal to good. Condition of standing spring crops and of sugarcane and cotton is good. Sowing of wheat, barley, rapeseed, &c., are in progress, and are normal or above normal. Crops newly sown are germinating well. Cattle are healthy, and fodder and water for drinking and irrigation purposes sufficient. Prices have an upward tendency but still range between normal and warning rates. Stocks of food-grains are sufficient. Prices of wheat :—Lahore and Lyallpur 9½, Ráwalpindi 9¾, Ferozepore 10¼ and Ambála 10½ seers per rupee.

MAHBUB SHAH, SUPERINTENDENT,

*Office of Director of Land Records, Punjab.*

# Notes on the condition and prospects of crops, &c., in each district of the Punjab during the month of October 1916.

### 1.—HISSAR DISTRICT.

Rainfall general and sufficient. Sowings of rabi crops in progress and are expected to be normal on irrigated area and above normal on unirrigated area. Standing crops in good condition. Kharif crop being reaped and cotton being picked. Outturn normal except of jowar which is very poor. Cattle in good condition. Green fodder sufficient. Public health generally good. Water-supply in inundation and perennial canals sufficient. Grain stock sufficient for local requirements. Prices rather stationary.

### 2.—ROHTAK DISTRICT.

Rainfall above the average and very beneficial to the standing crops and sowings. Sowings of gram, rapeseed, barley and wheat continued. Unirrigated area sown is normal but irrigated is still below normal. Standing crops are in fair to good condition. Yield of sugarcane, cotton and indigo in Tahsils Sonepat and Gohána good, elsewhere normal. Yield of millet is average and of jowar generally below average. Cattle in good condition. Fodder and water sufficient. Health of people good. Supply of canal water generally adequate. Prices of food-grains between normal and warning rates.

### 3.—GURGAON DISTRICT.

The rainfall of the first fortnight of the month, which was almost general, damaged to some extent the standing kharif crops in low-lying tracts, but was beneficial for the rabi sowings. Gram and barley were being sown. Sowings normal. Germination good. Cotton being picked. Estimated outturns in seers per acre of the important kharif crops are as follows :—

| | *Chahi.* | *Nahri* | *Abi.* | *Dehri.* | *Ala barani.* |
|---|---|---|---|---|---|
| Cotton ... | 120 to 200 | 120 to 300 | 100 to 200 | 200 | 150 to 200 |
| Bajra ... | 220 | 180 to 300 | 140 to 150 | 100 to 160 | 160 to 220 |
| Jowar ... | 140 | 140 | 1 0 | 80 to 140 | 80 to 140 |

Cattle in good condition. Green fodder plentiful. Health of people good. Canal was generally closed, but irrigation was not needed. No floods from torrents.

### 4.—KARNAL DISTRICT.

The rainfall in the first week of the month was beneficial to the kharif crops and highly useful for rabi sowings. Toria, sarson and gram have been sown. Sowing of barley and wheat and mixed crops is in progress. Condition of kharif crop is generally good. Early sown jowar bore little fruit, and some damage was done to cotton by rain. The expected yield of irrigated sugarcane, maize, bajra and rice is good and of cotton and jowar below average. The yield of unirrigated crops is generally below average. The condition of cattle is generally good. Fodder and water sufficient. Public health is good. Canal worked satisfactorily. No flood during the month.

### 5.—AMBALA DISTRICT.

Rainfall above average which damaged the cotton and sown rabi crops, specially gram and sarshaf. Sowings of rabi crops in progress. Germination good. Condition of standing sugarcane is good and of cotton average. Yield of rice, maize, cotton and til, &c., average. Cattle generally are in good condition. Green fodder and water-supply sufficient. Public health generally good. Western Jumna Canal worked during the second half of the month. Water-supply was sufficient but irrigation was not needed.

### 6.—SIMLA DISTRICT.

Rainfall during the month was sufficient. Wheat, barley, &c., were sown to the extent of three-fourths of the expected sowings. The outturn of the kharif harvest was as follows :—

| *Crop.* | SIMLA TAHSIL | | KOT KAI TAHSIL. | |
|---|---|---|---|---|
| | *Abi.* | *Barani.* | *Abi.* | *Barani.* |
| | Srs. | Srs. | Srs. | Srs. |
| Maize ... | 635 | 476 | ... | 350 |
| Rice ... | 529 | 424 | 300 | 250 |
| Mash ... | ... | 212 | 200 | 180 |
| Ginger ... | 2,285 | 2,117 | ... | ... |

Condition of cattle in both tahsils good. Fodder and grazing sufficient. Public health good. Water-supply from hill streams sufficient.

7.—KANGRA DISTRICT.

The rainfall during the month was above the average. It damaged harvested kharif crops to some extent, but was beneficial for the rabi sowings. Nearly one-fourth of the area has been sown with wheat, barley, oilseeds and gram. Sowings are in progress. Kharif crops have been cut. The yield of rice is good, while that of other crops is fair. Cattle are in good condition. Fodder is sufficient. Public health was generally good. Water in kuhls was sufficient for irrigation purposes. There is a slight fall in prices.

8.—HOSHIARPUR DISTRICT.

Sowings of wheat, barley, gram and other crops are in progress. Condition of standing sugarcane and cotton crops good. Yield expected to be average. Condition of cattle generally good. State of public health generally good. Shah Nahr Canal worked during the month. Prices generally stationary. Maize falling in price.

9.—JULLUNDUR DISTRICT.

Rainfall was above average, except in Phillaur Tahsil. It benefited the standing kharif crops and encouraged rabi sowings. Wheat, barley, mixed wheat and gram, &c., are being sown. Extent of sowings is normal. Standing maize, cotton and sugarcane crops are in good condition. Outturn above average. Maize in Jullundur Tahsil damaged slightly by insects. Cattle are in good condition and fodder is sufficient. Public health is generally good.

10.—LUDHIANA DISTRICT.

Rainfall in Samrála and Ludhiána Tahsils above average. It has slightly damaged the standing crops in the former and benefited those in the latter. Sowings of rabi crops completed except of wheat on irrigated land which continues. Condition of standing kharif crops on the whole good. Harvesting is in progress. Condition of cattle is satisfactory. Green grass and fodder available. Public health generally good. Irrigation from canals satisfactory.

11.—FEROZPORE DISTRICT.

Rainfall in Moga, Zíra and Muktsar Tahsils though slight proved beneficial to standing crops and to rabi sowings which were undertaken in the month. The condition of standing kharif crops was satisfactory. Crops were harvested, but the yield was not as good as expected. Maize and jowar crops were damaged by insects. The yield was from As. 4 to As. 8 in unirrigated land and from As. 8 to As. 10 in irrigated land. The yield of fodder, bajra, moth, mung, etc., was quite normal. The condition of cattle is good. Green grass and fodder were available. The working of Sirhind Canals was satisfactory. Grey Canals were closed. The state of public health was generally good. Prices of wheat and gram are stationary.

12.—LAHORE DISTRICT.

Some rain fell in the first week of the month and was beneficial to standing kharif crops. Wheat, barley, gram, turnips and fodder were sown. The extent of sowing was above normal. Standing sugarcane and rice crops above normal and cotton and toria normal. Maize and chari on irrigated land below normal and bajra and til on unirrigated land good. Outturn of sugarcane, rice, bajra and til above normal and of cotton normal, of maize and jowar it is below normal. Cattle are in good condition. Fodder is sufficient. Water in canals adequate.

13.—AMRITSAR DISTRICT.

Wheat, gram, barley and sarson were sown. Standing autumn crops good. Yield expected to be good. Condition of cattle good. Public health good. Fodder sufficient. Canals are working by rotation. Supply sufficient. No floods.

14.—GURDASPUR DISTRICT.

The rainfall during the month was average which benefited the crops. Rabi sowings commenced. Condition of standing crops good. Maize, rice, jowar, bajra and til were harvested during the month Outturn is good. Cattle generally in good condition. Fodder is sufficient. Public health is generally good. River Ravi is low. There is sufficient water in the Beas. The Bari Doab Canal is in full flow, but is not irrigating this district. No flood in both the rivers. Prices somewhat relaxed.

### 15.—Sialkot District.

Sowing of wheat, barley, gram, &c., in progress and are above normal. Condition of standing crops good. Yield of maize, cotton, bajra and rice good in irrigated and average in unirrigated lands. Condition of cattle good. Dry fodder scarce but green sufficient. Canal irrigation closed at the end of month. Deg flooded once.

### 16.—Gujranwala District.

No rain fell in Wazirabad and Gujránwála Tahsils. In other tahsils it was above normal and benefited rabi sowings. Sowings of toria and gram finished and of wheat and barley in progress. General condition of crops is good. Yield of rice is expected to be much above average and that of maize below normal on account of damage by borers. Cotton is good and toria excellent. Condition of cattle is fair. Fodder is sufficient. Supply of canal water was sufficient.

### 17.—Gujrat District.

Rainfall slight. Sowings of rabi crops in progress Condition of sugarcane and cotton is generally good. Other crops are being harvested. Yield of bajra, rice and sugarcane good, and of jowar, maize and pulses bad. Cattle are generally in good condition. Fodder is ample. Public health is generally good. Canal flowing.

### 18.—Shahpur District.

Rain was timely and beneficial to the standing crops. Sowings of toria, turnips gram, wheat and barley continued. Germination is good. Condition of sugarcane, maize and bajra good in Bhera, Shahpur and Sargodha Tahsils, and that of cotton normal. The harvesting of bajra, maize and rice and picking of cotton in progress. Outturn of rice good and of others normal. Cattle in good condition. Fodder sufficient. Lower Jhelum Canal continued to flow and irrigated the lands.

### 19.—Jhelum District.

Rainfall slight but the moisture from the monsoon rain sufficed for rabi sowings which are extensive and nearly complete. The newly germinated crops are in good condition, and harvesting of all kharif crops nearly completed. Yield expected to be average except of moth, mung and cotton. Condition of cattle generally good. Fodder sufficient.

### 20.—Rawalpindi District.

There was already sufficient moisture for rabi sowings which have been above normal. The rainfall in October did much good. The yield of bajra and maize is good, while that of other kharif crops is poor, having suffered from excessive rainfall. Cattle are in good condition; grazing ample. Fodder is abundant.

### 21.—Attock District.

The rainfall during the month was above average and caused sufficient moisture for rabi sowings which have been almost finished. It was also beneficial to the standing kharif crops, which are in good condition. Yield generally good on irrigated lands and normal on the unirrigated ones. Talagang Tahsil figures are as noted below :—

| | | *Bajra.* | *Cotton.* | *Maize.* | |
|---|---|---|---|---|---|
| Irrigated | ... | 10 mds. | 3 mds. | 16 mds. | per acre. |
| Unirrigated | ... | 4½ " | 2 " | ... | |

Condition of cattle fairly good. Fodder is sufficient and grazing is available. Prices have slightly fallen.

### 22.—Mianwali District.

Wheat and barley were being sown. Sowings above normal. Condition and expected yield of kharif crops average to good. Cattle in good condition. Fodder and grazing available. Kurram Canals watering lands sufficiently in Isa Khel Tahsil and Nammal Canal in Miánwáli Tahsil.

### 23.—Montgomery District.

Wheat, gram, barley, &c., have been sown during the month. Condition and expected yield of standing autumn crops of Ravi tahsils is good and those of Sutlej tahsils is average. Condition of cattle is good. Canals flowing; supply sufficient.

### 24.—LYALLPUR DISTRICT.

Slight rain fell in all tahsils. Standing crops are in good condition. Wheat and gram sowings are in progress. Condition of crops is good all round. Picking of cotton continues. Harvesting of maize and pressing of sugarcane commenced. Cattle are in good condition. Fodder sufficient. Public health good. Canals worked satisfactorily. Wheat trade is in progress.

### 25.—JHANG DISTRICT.

Rainfall above average and has benefited the standing crops and will help sowings. Wheat and barley are being sown. Condition of crops good. Outturn of jowar in the Jhang Tahsil is reported to be below normal. Elsewhere average. Yield of rice and cotton above the average. Condition of cattle has been good Green fodder and bhusa available. Canals flowing but no inundations. Prices stationary.

### 26.—MULTAN DISTRICT.

The rainfall during the month was useful to the sowings of rabi crops and the standing kharif crops Condition of the kharif crops on irrigated area is good and on unirrigated area average. The outturn of rice, cotton, bajra, jowar and indigo is normal. Condition of cattle is good. Bhusa to a small extent and jowar, maize, mash and spontaneous grass available as fodder. Bhusa decreasing in stock. Public health fair. Sidhnai flowing with usual water and most of the inundation canals stopped. Mailsi inundation canals only running by turn. Prices of food-grains remained stationary.

### 27.—MUZAFFARGARH DISTRICT.

There was very little rainfall during the month. Gram, peas, barley, wheat, &c., were sown. Condition of crops average in Muzaffargarh and Leiah and good in Sanáwán and Alipur. Outturns are as follows :—

| | | | | |
|---|---|---|---|---|
| Rice | ... | ... | ... | 8½ mds. per acre |
| Sugarcane | ... | ... | ... | 11 „ „ |
| Cotton | ... | ... | ... | 2¼ „ „ |

Condition of cattle good. Fodder available. Public health generally fair. Canals receiving supply from the Indus still working to some extent. Prices of food-grains still high.

### 28.—DERA GHAZI KHAN DISTRICT.

No rain. Sowing of gram and wheat is in progress. The condition and expected yield of standing crops is average. Condition of cattle is satisfactory. Fodder is available in sufficient quantity. The canals ran only for a few days of the month and the supply was low. No inundation in the river or the hill torrent. The price of jowar and bajra has gone down, while the prices of other food staples are still high.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 11th November 1916, there were 1,378 births registered in the 38 large municipal towns (728 males and 650 females), giving a birth rate of 60 *per mille* of population, and 1,081 deaths were registered (558 males and 523 females), giving a death rate of 47 *per mille* of population. The death rates registered in the three largest towns were as follows :—Lahore 49 against 34 in the corresponding week of the previous year, Amritsar 57 against 35, and Multán 38 against 43.

There were 38 deaths reported from plague in Ráwalpindi.

| 13 | Lyallpur ... | ... | 1. Dry fodder sufficient; green insufficient. 2. (b) Canals working by rotations; supply normal. 3. Generally good. | Wheat, 9 ... Gram, 11. Maize, 14. Prices at warning or scarcity rates. | Picking of cotton and pressing of sugarcane continue. Yield of cotton normal. | Sowings of wheat in progress and are normal. Standing crops good. |
| 14 | Multán ... | ... | 1. Available ... 2. (b) Sidhnái Canal and Mailsi Canal flowing by turn. 3. Good. | Wheat, 9 ... Barley, 12. Gram, 12. Bajra, 13½. Maize, 16. Prices between normal and scarcity rates. | Harvesting of bajra and picking of cotton continue. Yield normal. Condition of standing crops good. | Sowings of wheat continue and are normal. Standing crops good. |

## *GENERAL REMARKS.*

WEATHER remained dry. Rain is wanted for spring crops in a few south-eastern and submontane districts. Picking of cotton, pressing of sugarcane and harvesting of maize and rice, &c., continue. Yield is normal to good. Condition of standing spring crops and of sugarcane and cotton is generally good. Sowings of wheat, barley, rapeseed, &c., are in progress, and are normal or above normal. Germination of crops sown is good. Cattle are healthy, and fodder and water for drinking and irrigation purposes sufficient. Prices of wheat and other grains have risen and generally range between normal and scarcity rates. In some cases kharif food grains are below normal rates. Stocks of food grains are sufficient. Prices of wheat :—Lahore 8½, Lyallpur 9, Ambála, Ferozepore and Ráwalpindi 9½ seers per rupee.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 18th November 1916, there were 1,411 births registered in the 38 large municipal towns (744 ...and 667 females), giving a birth rate of 61 *per mille* of population, and 1,051 deaths were registered (533 males and ...females), giving a death rate of 46 *per mille* of population. The death rates registered in the three largest towns were ...lows :—Lahore 50 against 33 in the corresponding week of the previous year, Amritsar 47 against 39, and Multán 45 ...t 33.

There were 41 deaths reported from plague in Ráwalpindi.

...nitary Commissioner's Office,
Lahore :
*The 28th November* 1916.

W. H. MILLS, Supdt.,
for *Sanitary Commissioner, Punjab.*

Prices generally between warning and scarcity rates. | Standing crops good. Picking of cotton, pressing of sugarcane and harvesting of sesamum continue. Yield normal. | Sowings of wheat continue and are normal. Condition of standing crops good. |

## *GENERAL REMARKS.*

WEATHER remained dry. Rain is wanted for spring crops in some districts. Picking of cotton, pressing of sugarcane and harvesting of maize, rice, &c., are in progress. Yield is generally normal to good, except of cotton in the south-east which is reported to be below normal. Condition of standing wheat and other spring crops and of sugarcane and cotton is generally good. Sowings of wheat, barley, rapeseed, etc., continue, and are normal or above normal. Germination of crops sown is good. Cattle are healthy, and fodder and water for drinking and irrigation purposes generally sufficient. Prices of wheat and other grains are rising and range between normal and scarcity rates. Stocks of food grains are sufficient. Prices of wheat:—Lahore and Ráwalpindi 8¾, Ambála, 8¼, Ferozepore and Lyallpur 9½, seers per rupee.

*Remarks by the Sanitary Commissioner, Punjab.*

During the week ending 25th November 1916, there were 1,356 births registered in the 38 large municipal towns (70[8] males and 648 females), giving a birth rate of 59 *per mille* of population, and 895 deaths were registered (426 males and 469 females), giving a death rate of 39 *per mille* of population. The death rates registered in the three largest towns wer[e] as follows :—Lahore 47 against 41 in the corresponding week of the previous year, Amritsar 37 against 32, and Multán 4[3] against 50.

Of the 37 deaths from plague, 36 were reported in Ráwalpindi and 1 in Ambála. There was 1 death registered from small-pox in Lahore.

</table>

*GENERAL REMARKS.*

Weather remained dry. Rain is wanted for spring crops almost everywhere. Picking of cotton and pressing of sugarcane cont[illegible]. Yield is generally normal to good, except of cotton in parts of the south-east, where it is reported to be below normal. Condition of standing sugarcane and cotton and of spring crops is generally good. Irrigated wheat and barley, etc., are being sown in some districts. Area sown is normal or above normal. Germination of crops sown is generally good. Cattle are healthy, and fodder and water for drinking and irrigation purposes generally sufficient. Prices are generally stationary and range between normal and scarcity rates. Stocks of food grains are sufficient. Prices of wheat :—Lahore 8¾, Ambála, 8¼, Ráwalpindi 9, Lyallpur 9½ and Ferozepore 9¾, seers per rupee.

MAHBUB SHAH, Supdt.,

MARKS.

monsoon set in on the 6th and held uninterruptedly during the rest of the month. In most years the final withdrawal of the monsoon from the Punjab occurs in the second

Lahore and Multán Divisions only, the excess being most marked in the Multán Division where it amounted to 4·69. Compared with the birth rate for the previous month month of the previous year there was an increase of 27,698 deaths or 17·69 *per mille* of population which was shared by all the divisions in the province, but was most

Divisions and was most marked (13·38) in the Lahore Division. The excess was principally due to a larger number of deaths recorded under the head of fever.

year and 540 in the previous month.

Yield normal. | Sowings of irrigated wheat continue, and are normal. Standing crops good. |

## GENERAL REMARKS.

EXCEPT for light showers in the Ráwalpindi District, weather remained dry. Rain is wanted for spring crops everywhere. Picking of cotton and pressing of sugarcane continue. Yield is generally normal to good, except that in parts of the south-east the outturn of cotton is below normal. Standing sugarcane and cotton, wheat and other spring crops are generally in good condition. Sowings of irrigated wheat and barley, etc., are in progress in some districts, and are normal or above normal. Germination is good. Cattle are healthy, and fodder and water for drinking and irrigation purposes sufficient. Shortage of canal water is reported from Multán. Prices have fallen slightly in some districts, but range between normal and scarcity rates. Stocks of food-grains are sufficient. Prices of wheat:—Ambála 8½, Lahore and Ráwalpindi 9, Lyallpur 9½, and Ferozepore 9¾ seers per rupee.

D. J. BOYD,

*Director of Land Records, Punjab.*

rain-gauge station,
rainfall,
averages have been fixed,

MAHBUB SHAH, SUPERINTENDENT,

*Office of Director of Land Records, Punjab.*

# Notes on the condition and prospects of crops, etc., in each district of the Punjab during the month of December 1916.

### 1.—Hissar District.

No rain has fallen. Sowings of rabi crops are in progress and expected to be normal on irrigated area and above normal on unirrigated area. Kharif crops have been harvested. Yield normal except of jowar which is very poor. Cattle are in good condition. Dry fodder is available. Public health is good. Water in perennial canals is sufficient. Inundation canals are drying up. Grain stock is sufficient but the prices are rising.

### 2.—Rohtak District.

No rain fell during the month. Sowings of irrigated rabi crops are below normal and of unirrigated normal. Standing crops are in fair to good condition. Yield of indigo is good, of bajra and sugarcane average, and of cotton and jowar below average. Cattle generally in good condition. Supply of fodder and water for drinking and canal irrigation sufficient. Public health generally good. Prices of food grains between warning and normal rates.

### 3.—Gurgaon District.

No rain. Gram, barley, wheat and sarson being sown. Sowings above normal. Germination good. Cotton being picked and sugarcane being pressed. Yield of cotton poor in many places and of cane average. Estimated outturn in seers per acre of cotton and sugarcane is as follows :—

| | *Chahi* | *Nahri* | *Barani* |
|---|---|---|---|
| Cotton ... | 80 to 200 | 80 to 300 | 50 to 200 |
| Sugarcane ... | 600 | 600 | 400 |

Cattle in good condition. Green fodder sufficient. Health of people good. Canal was running, supply sufficient.

### 4.—Karnal District.

No rain fell during the month. Wheat, barley, etc., have been sown. The condition of rabi crops is good. Rain is wanted. The yield of the kharif crops is average. If rain falls in December or in the first week of January, the prospects will be good. The condition of cattle is generally good. Fodder and water sufficient. The public health is generally good. Canals working satisfactorily.

### 5.—Ambala District.

No rain fell during the month. Sowings of rabi crops finished. Condition of the standing cotton, sugarcane and rabi crops is good. Yield of maize, rice, cotton, til, etc., are average. Cattle are generally in good condition. Fodder and water-supply sufficient. Public health generally good. Western Jumna Canal flowed continually. Water-supply sufficient, but irrigation was not needed. Prices have risen.

### 6.—Simla District.

No rain fell during the month. Wheat and barley were sown to the extent of ¼th. The crops are young and in great need of rain. Their condition so far is average. Condition of cattle good. Fodder and grazing sufficient. Public health good. Water in hill streams sufficient.

### 7.—Kangra District.

No rain fell during the month. Three-fourths of the area has been sown with wheat, barley, gram and other rabi crops. Rain is wanted for unirrigated area. Germination fair. The condition of cattle is good. Fodder is sufficient. Public health is good. Water in streams and kuhls is sufficient for irrigation purposes.

8.—HOSHIARPUR DISTRICT.

No rain fell during the month. Sowings of rabi crops finished. The condition of crops is below average in tahsil Dasúya and average in other tahsils. Sugarcane and cotton are in good condition. Picking of cotton and pressing of sugarcane continue. Estimated outturn average. Condition of cattle generally good. State of public health generally good. Shah Nahr Canal continued flowing during the month. Rates of food grains and salt rising.

9.—JULLUNDUR DISTRICT.

No rain, nor is it needed at present. Sowings of rabi crops are now almost finished and are normal. The standing cotton, sugarcane and chillies are in good condition. The yield is normal. Cattle are in good condition. Fodder is sufficient. Public health is generally good.

10.—LUDHIANA DISTRICT.

No rain, fell during the month. Sowings for rabi crops completed. Condition of standing crops good. Yield of kharif crops average. Pressing of sugarcane has commenced. Condition of cattle good. Irrigation from canals was as usual.

11.—FEROZEPORE DISTRICT.

The weather remained dry throughout the month, but rain is anxiously awaited. The condition of standing rabi crops is satisfactory especially on irrigated land. The condition of cattle is generally good and dry fodder is available. The state of public health was generally good. The working of Sirhind canals was satisfac ry. Prices of wheat and gram show a gradual rise.

12.—LAHORE DISTRICT.

No rain fell during the month. Wheat, gram, barley, rape-seed and fodder were sown on irrigated and unirrigated lands. Sowings are above normal. General condition of standing crops is good. The yield of sugarcane is above normal and that of cotton about normal. Cattle are in good condition. Fodder is available. The state of public health is generally good. Perennial canals are running by turns with full supply.

13.—AMRITSAR DISTRICT.

Wheat, barley, sarson and senji being sown. Standing crops good. Condition of cattle good. Fodder sufficient. Public health good. Canals are working by rotation. Supply sufficient.

14.—GURDASPUR DISTRICT.

No rain fell during the month. Rabi sowings are in progress. The condition of standing crops is good. Pressing of sugarcane commenced. Outturn good. Rice, mash and moth were threshed during the month. The outturn of rice is good and that of mash and moth average. Cattle generally good. Fodder is sufficient. The health of the people is generally good. The River Ravi is low. Government canal is flowing but not irrigating lands. Prices somewhat risen.

15.—SIALKOT DISTRICT.

Sowings of wheat, barley, senji, sarson and vegetable continued. Condition of standing crops good. Yield of maize, sugarcane, cotton, rice, bajra and sesamum good on irrigated but average on unirrigated tracts. Condition of cattle generally good. Fodder sufficient. Public health generally good. Canal remained closed. Jhallari irrigation continued from the Aik.

16.—GUJRANWALA DISTRICT.

Slight rain fell at Háfizábád and Khángah Degrán, and was beneficial to rabi sowings. Sowings of wheat and barley are in progress. General condition of the standing crops is good. Yield of cotton is expected to be normal and that of rice above normal. Sugarcane and toria are good. Condition of cattle is fair. Fodder is sufficient. Irrigation by canal is done by rotational turns; supply sufficient.

17.—GUJRAT DISTRICT.

Sowings of rabi crops on unirrigated lands finished and on irrigated lands are in progress. Germination of rabi crops generally good. Cotton picking and sugarcane pressing are in progress. Estimated yield of cotton below average and that of sugarcane generally good. Cattle in good condition. Fodder sufficient. Public health generally good. Canal flowing.

### 18.—Shahpur District.

No rain. Sowings of wheat, barley and gram continued. Germination is good. Condition of sugarcane and toria good and that of cotton normal. Picking of cotton, pressing of sugarcane and harvesting of bajra are in progress. Outturn of cotton average and of other crops good. Cattle in good condition. Fodder sufficient. State of public health is generally good. Lower Jhelum Canal continued to flow with sufficient supply of water.

### 19.—Jhelum District.

No rain fell during the month but sufficient moisture remained from monsoon rains to enable sowings to be continued. Sowings practically ended with the first week in November. The young crops are in splendid condition. Given seasonable rain in about three weeks or a month's time the crops should be a bumper one. Condition of cattle good. Fodder sufficient Public health generally good. Prices rising.

### 20—Rawalpindi District.

There was little or no rainfall. Sowings finished. Crops germinating well but need rain now. Cattle are in good condition. Public health generally good.

### 21.—Attock District.

No rain fell during the month. Rabi sowings finished. The condition of the standing rabi crops is generally good, but rain is badly wanted now. The estimated yield per acre in seers of the principal kharif crops is as below :—

| | *Bajra.* | *Cotton.* | *Maize.* |
|---|---|---|---|
| Irrigated ... ... | 400 | 55 | 720 |
| Unirrigated ... ... | 175 | 33 | 290 |

The condition of the cattle is generally good. Public health good. Water is sufficient. The prices have again risen slightly.

### 22.—Mianwali District.

No rainfall. Wheat being sown. Sowings above normal. Condition of rabi crops average to good. Cattle in good condition and fooder and grazing available. Public health generally good. The Kurram Canal is watering lands sufficiently in Isa Khel and Nammal Canal in Miánwáli Tahsil.

### 23.—Montgomery District.

Wheat, barley and gram sowings continued during the month. Condition of standing crops is good. Condition of cattle good. Public health generally good. Lower Bari Doab Canal is flowing with full supply of water, other canals are dry. Rivers have a normal supply of water. The prices of food-grains are rising every day.

### 24.—Lyallpur District.

No rain. Sowing of wheat in progress and that of gram finished. Condition of standing crops is good all round. Picking of cotton and pressing of sugarcane continues. Harvesting of maize finished. Outturn of cotton good and of maize is average. Cattle are in good condition. Fodder sufficient. Public health good. Canal worked satisfactorily.

### 25.—Jhang District.

No rain fell during the month. Wheat and barley are being sown. The yield of cotton is normal, and that of jowar is below normal. The condition of cattle is generally good. The public health is good. Canals flowing. Prices are rising.

### 26.—Multan District.

No rain fell during the month. Sowings of wheat, barley, gram and peas are in progress Condition of kharif crops on irrigated areas are good, and on unirrigated areas normal. Condition of rabi crops good. The outturn of jowar, bajra, rice and cotton average. The condition of cattle good. Fodder sufficient, bhoosa to some extent, dry grass of bajra, chari and turnips available as fodder. Public health fair. Sidhnai Canal flowing by turn with usual water. All inundation canals stopped, but Mailsi Canal flows by turns. Prices of food grains rising.

27.—Muzaffargarh District.

Practically no rain fell during the month. Wheat, barley and gram being sown. Condition of crops good in Leiah and Muzaffargarh tahsils and average in the Alipur and Sanawan tahsils. Til being harvested, sugarcane being pressed and cotton being picked. The yield per acre is 2 maunds, 11 maunds, and 2 maunds, respectively. Condition of cattle generally good. Public health good. Canal irrigation almost discontinued. Prices of food grains still rising.

28.—Dera Ghazi Khan District.

No rain. Wheat and gram were sown during the month. The condition of the standing crops is fair. The expected yield of the crops is average. Condition of cattle is good and fodder sufficient. Public health is generally good. No flood in river or in hill torrents. Only two canals flowed for a few days. Prices are stationary except of jowar and bajra which are a little cheaper than last month.

| 10 | Shahpur ... | Report not received. | | | | |
| 11 | Ráwalpindi ... | ... | 1. Sufficient ... 3. Good. | Wheat, 9 ... Barley, 14½. Gram, 11½. Maize, 12. Bajra, 12 Prices between warning and scarcity rates. | ... | Rain wanted. Standing crops good. |
| 12 | Miánwáli ... | ... | 1. Procurable 2. (a) Do. (b) Canals flowing; supply sufficient. 3. Fair. | Wheat, 9 ... Barley, 14. Gram, 12. Bajra, 12½. Prices between warning and scarcity rates. | ... | Sowings of irrigated wheat continue in Isa Khel Tahsil and are normal. Standing irrigated crops average to good and unirrigated average. |
| 13 | Lyallpur ... | ... | 1. Sufficient ... 2. (b) Canal working by rotation; supply normal. 3. Good. | Wheat, 10 ... Gram, 11¾. Maize, 14½. Prices between normal and scarcity rates. | Standing irrigated crops good and unirrigated average. Picking of cotton and pressing of sugarcane continue. Yield good. | Condition of standing irrigated crops good and unirrigated average. |
| 14 | Multán ... | ... | 1. Available ... 2. (b) Canals closed. 3. Good. | Wheat, 9¾ ... Barley, 11¼. Bajra, 12½. Gram, 11¼. Maize, 14. Prices generally between warning and scarcity rates. | Pressing of sugarcane and picking of cotton continue. Yield normal. | Standing crops good. |

*GENERAL REMARKS.*

WEATHER remained dry. Rain is wanted for spring crops everywhere. Pressing of sugarcane and picking of cotton are in progress. Yield is generally normal to good. Standing sugarcane, cotton, wheat and other spring crops are generally in good condition. Late sowings of irrigated wheat continue in a few districts, and are normal or above normal. Germination is good. Toria being harvested. Yield generally normal. Cattle are healthy, and fodder and water for drinking and irrigation purposes sufficient. Prices are generally stationary and range between normal and scarcity rates. Prices of wheat :—Ambála 8¼, Lahore and Ráwalpindi 9, Ferozepore 9¾, Lyallpur 10, seers per rupee.

B. D. SINGH,

for *Director of Land Records, Punjab.*

# SUMMARY OF METEOROLOGICAL CONDITIONS PREVAILING OVER THE PUNJAB AND THE NORTH-WEST FRONTIER PROVINCE DURING OCTOBER 1916.

(a)-Mean of 29 days.

*Not reduced to sea-level.

(b)-Aneroid.

An advance of the monsoon occurred over the Punjab between the 2nd and the 4th and gave rise on the latter date to general, and for the time of year heavy, rain ; thereafter the weather was dry.

As a rule the final burst of monsoon rainfall in the Punjab is recorded in the second or third week of September.

*Pressure and Winds.*—Atmospheric pressure was generally below normal. Winds, although of about normal strength, were even more variable in direction than is usual in October.

*Temperature.*—Mean temperature for the month was within 3° of the normal at all the recording stations.

The following table shows for each day of the month the departure from the normal of the mean temperature of the Punjab and the North-West Frontier Province, with the highest temperature registered and the name of the station recording it :—

| Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. | Date. | Departure from normal of mean temperature of the Punjab and the N.-W. Frontier Province during the previous 24 hours. | Highest maximum temperature recorded during the previous 24 hours. | Station at which registered. |

*Humidity and Cloud.*—The air was damper and the sky more cloudy than is ordinarily the case in the Punjab.

*Rainfall.*—In the Punjab the month's rainfall was above the normal at all the meteorological stations with the exception of Montgomery and Siálkot ; the excess amounted to 9″ at Ambála, 2½″ at Simla, 1½″ at Khusháb and Hissar and 1″ at Ráwalpindi, Murree and Multán. In the North-West Frontier Province it was normal or in defect except at Páráchinár.

The following table gives the rainfall data for the Punjab and the North-West Frontier Province stations for October 1916 :—

| Station. | Actual rainfall in October 1916. | Normal rainfall in October. | Departure from normal in October 1916. | Station. | Actual rainfall in October 1916. | Normal rainfall in October | Departure from normal in October 1916. |

### REVIEW OF THE APPROPRIATION REPORT ON THE ACCOUNTS OF THE PUNJAB FOR THE YEAR 1914-15.

Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Financial Department, No. 97, dated 14th January 1916.

READ—

The Appropriation Report on the accounts of the Punjab for the year 1914-15 (Preliminary Issue).

REMARKS.—The abnormal conditions created by the European war render it impossible to obtain from the accounts of 1914-15 any insight of practical value into the broad movements of revenue and expenditure in the Province, or to draw any useful deductions as to the accuracy of the budget anticipations. The Lieutenant-Governor therefore proposes to dispense this year with the detailed examination of the figures reported by the Accountant-General, Punjab, which has been a prominent feature of the reviews of previous Appropriation Reports.

2. 12·1 per cent. of the expenditure incurred by Civil Departments was placed under objection in the course of the year: and, judging from the figures of 1913-14, when practically the same percentage was recorded, the irregular expenditure incurred in the Punjab is considerably higher than that of most other Provinces. His Honour is, however, disposed to think that, without a detailed analysis for which no material is available, any comparison with the results shown elsewhere is to a great extent misleading. It seems probable that a larger amount of expenditure is placed temporarily under objection for want of countersigned bills in the Punjab than in Provinces where the contract system is more freely

employed, and that the higher average of expenditure which cannot be brought to account immediately is merely the result of heavier countersigned contingent expenditure In that case, the extension of the contract grant system which will come into force on the 1st April next, should lead to an automatic improvement.

3. His Honour is glad to see that the recent admonitions addressed by Chief Engineers to their subordinates on the subject of account irregularities have begun to bear fruit, and that there was a satisfactory decrease in the expenditure of both branches of the Public Works Department which was placed under objection by the audit office: the great bulk of the objections raised related to minor breaches of rule. Works still appear to be started with too great frequency before their estimates have been duly sanctioned, and the Lieutenant-Governor hopes that the Chief Engineers will be able to procure a further improvement in this direction.

4. The specific instances of irregularity brought to notice by the Accountant-General were not, in the main, of a serious nature, but they show that there are still occasions on which controlling officers fail to apply a sufficiently careful scrutiny to travelling allowance and contingent bills. Instructions are being issued to prevent the recurrence of double claims to travelling allowance, of which there were five instances in the year under report, and Sir Michael O'Dwyer would once again impress upon controlling and disbursing officers the necessity for exercising due vigilance in passing all payments from the public monies which are placed in their charge.

---

ORDER.—Ordered that a copy of the foregoing remarks be submitted to the Government of India, Finance Department, and forwarded to the Comptroller and Auditor-General, the Accountant-General, Punjab, and all Heads of Departments in the Punjab. Also that the remarks be published in the *Punjab Government Gazette* for general information.

By order of His Honour the Lieutenant-Governor of the Punjab,

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

---

**REVIEW OF THE PROGRESS REPORT OF THE FOREST ADMINISTRATION IN THE PUNJAB FOR THE YEAR 1914-15.**

Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Forest Department, No. 22, dated 13th January 1916.

READ—

The Progress Report of the Forest Administration in the Punjab for the year 1914-15, submitted by the Conservator of Forests, Punjab, with his letter No. 2848, dated 22nd September 1915.

REMARKS—During the year there was a net reduction of 76·70 square miles in the area under the control of the Forest Department, due mainly to the transfer of about 52,000 acres of Protected Forest in Kangra to the charge of the Deputy Commissioner. The preservation of the Kangra forests has received considerable attention during the year. The selection of areas to be closed under section 29 of the Forest Act is reported to be nearing completion, and 1,881 acres were actually closed. This measure is incidental to the general revision of the Working Plan of these forests which is in progress and which is to prescribe more intensive management accompanied by a large increase in the outturn.

The transfer of a large area to the control of the Deputy Commissioner has been sanctioned, partly in order to enable the Forest Department to concentrate attention on the more valuable forests, but chiefly with a view to associating the people themselves with the management of the forests, and it is hoped that in this way they will be brought to realise the damage caused by excessive grazing and browsing, and will endeavour themselves to supply the remedy. It was for the purpose of restricting this damage that Government sanctioned the imposition of a grazing tax in 1913, and the question has again been under consideration. A conference was convened in December 1914, and as a result orders were issued postponing the imposition of the tax on the buffaloes of zamindars until a scheme could be worked out to tax only the surplus animals kept in excess of the legitimate domestic requirements of the owners. The tax on sheep and goats was, however, confirmed, and in the case of goats it was decided that the tax should be considerably enhanced if on the expiry of two years it was found that it had not had the desired effect of reducing them to a reasonable number. The Kangra jagir forests have also received attention, and all forest and waste lands on which the trees are the property of Government have been notified as protected forests and the trees declared reserved. The forest records-of-rights have also been revised, and conditions of management as between the Rajas and Government have been approved. Apart from the forests proper, the vexed and complicated question of rights in trees standing on uncultivated and waste lands has been under examination and Government has indicated the lines on which the rights of Government and of private owners are to be determined.

2. Schemes for the formation of irrigated plantations are now almost complete. In addition to the Khanewal plantation of 19,290 acres the selection of an area of 11,680 acres at Chichawatni, also to be irrigated by the Lower Bari Doab Canal, was sanctioned. On the Upper Bari Doab Canal a small area of 1,965 acres has been selected at Kot Lakhpat, and 10,000 acres is being reserved for the same purpose at Pir Mahal on the Lower Chenab Canal. It was originally intended to form a large plantation in the Sharakpur Tahsil of the Gujranwala District and to limit the area at Khanewal to 10,000 acres in accordance with the recommendation of the Inspector General of Forests, but as preparations for irrigating the larger area at Khanewal had already been made, the Sharakpur plantation was abandoned and the larger scheme at Khanewal, which is very favourably situated on both sides of the main Railway line from Lahore to Karachi, was sanctioned. The selection of an area of 7,500 acres in the Gujrat District will complete the scheme of irrigated plantations. In Changa-Manga plantation the surplus on the year's working of an area of 11,400 acres was over 1½ lakhs of rupees, and it is expected that when fully matured the new plantations will produce a net income of about 12 lakhs.

3. There was a considerable fall in the number of forest offences during the year, from 11,951 to 9,736, which is slightly below the figure of two years ago, but this decrease is not regarded by the Conservator with unmixed satisfaction. In Rawalpindi and Kangra, where the decrease in offences other than fire offences is most marked, he attributes it to strict administration of the law and the imposition of adequate penalties, but for the most part he considers the apparent improvement to be due to causes of an accidental and temporary nature. The serious outbreak of incendiarism at the beginning of the hot weather in the Rawalpindi and Kangra Divisions after some years of comparative immunity is particularly regrettable, for though the causes of the outbreak have not yet been fully ascertained it would appear that at any rate the majority of the fires did not start accidentally, and it is thus clear that even the severest punitive measures are inadequate to stamp out the infectious madness of incendiarism. In the case of the Rawalpindi forests the damage done is all the more deplorable, as the success of the new Working

Plan, which provides for an output three times as great as the plan which it has superseded, depends on the ability of the Forest Department to protect the forests from fire. In all the number of fires was 302, nearly double that of the previous year, and the area burnt was 41.578 acres as compared with 7,389 acres. In addition 33,133 acres were burnt by the department as a protective measure or to provide a supply of fresh grass for the villagers. The experiment of departmental firing was tried in Kangra for the first time, but was unsuccessful owing to the heavy rainfall, while in Rawalpindi though large areas were successfully treated the measure proved inadequate to prevent the occurrence of uncontrolled fires.

4 There is little to notice with regard either to the ordinary sylvicultural operations of the year or to sylvicultural experiments. The irrigated plantations at Chichawatni and Kot Lakhpat appear to have suffered again from an inadequate and erratic water supply and the sowings, except of a small area in Kot Lakhpat, were only moderately successful. The excellent results of coppicing *Robinia*, which was tried at Jutogh, are noticed by the Conservator, and lead him to think that perhaps *Robinia* may be found preferable to eucalyptus as a species to be used in afforesting the bare hill sides in the vicinity of Simla. The general question of assisting natural reproduction by the adoption of more rational methods of management is receiving considerable attention, and in this respect the new Working Plan of the Murree and Kahuta forests marks an important advance. Similarly the improvement of existing stock by a well-regulated policy of thinnings, which were carried out on a considerable scale last year, is an instance of the more scientific management of forests which is now being adopted, and at the same time reflects the steady advance which is being made in the provision of a trained staff for want of which such operations have been impossible in the past. The Punjab Forest School is, however, now affording training for a considerable number of subordinates, while the further improvement of facilities for forest education is engaging the attention of Government. A scheme for the formation of a joint Forest School at Dehra Dun for the training of Rangers for the Punjab, North-West Frontier Province and United Provinces is under discussion, but the cost as at present estimated is out of proportion to the results anticipated, and the Lieutenant-Governor has found himself unable to bind the Punjab to join in the scheme unless the cost can be very materially reduced.

5. The amount of timber extracted was over 6 lakhs of cubic feet in excess of the previous year, while the amount of fuel removed was greater by nearly 11 million cubic feet. In the latter case, however, the increase is almost entirely due to the inclusion in the returns for the first time of fuel removed by Kangra right holders. Altogether 34,040,355 cubic feet of major forest produce and nearly Rs. 23 lakhs worth of minor produce were extracted. The percentage of timber removed by departmental agency was about the same as in the previous year, but the Conservator considers that if Government is to secure a legitimate share of the profits accruing from the rise in prices of coniferous timbers departmental extraction will have to be resorted to on a much larger scale. Recent memoranda by the Inspector-General of Forests on the working of the Kulu and Kangra Forests, which the Lieutenant-Governor has just seen, support the Conservator's view, and the Lieutenant-Governor will be prepared to consider a partial reversion to the system of departmental working, which was in vogue till a few years ago, when the question next arises in a concrete form.

6. The cash surplus has been steadily growing of recent years and on the year's working amounted to Rs. 5,64,139,—an increase of Rs. 1,32,360 on the previous year. There was a slight falling off in expenditure from Rs. 9,25,748 to Rs. 9,02,454, and an increase of income under various heads, of which the principal item was an increase of Rs. 58,000

realised by the sale of fuel from areas to be colonised. The expenditure on roads and buildings (Rs. 1,15,000) was again very high, but was fully justified. The large outstandings of revenue noticed in last year's Review have been substantially reduced.

The financial results of the resin industry during the year were most encouraging, though distillation was carried on for only three months. The factory at Jallo was completed during the winter and started work on March 15th. The new plant has been most successful, proving more economical to work and producing a higher yield of turpentine oil. The total expenditure was Rs 64,660, of which more than half is debitable to capital account, while the gross revenue collected was nearly Rs. 60,000, and there were outstandings amounting to Rs 10,000. These results are most creditable to Mr. Gibson, the officer responsible for the selection and installation of the new plant as well as for the general working. Arrangements are being made to eliminate competition between the Punjab and United Provinces factories, and the appointment of a joint sales-manager is in contemplation.

7. The reorganisation and improvement of the pay of the clerical establishment of the department, which has been in contemplation for some years, has been given effect to from 1st April 1915, at an increased annual cost of Rs. 7,635. Proposals for the reorganisation of the superior staff are not yet complete. His Honour, however, recognises that the growing responsibilities of the department and the more intensive working which modern forestry demands, justify an enlargement of the controlling staff, and he hopes to be able to obtain sanction to a reasonable scheme of expansion by the time the financial situation will allow of its being brought into operation.

8. The Lieutenant-Governor desires to acknowledge the energy with which Mr. McIntosh has assumed the direction of the department and to thank him for an interesting report. He desires also to acknowledge the zeal and thoroughness with which the officers of the department have carried out their duties during the year.

---

ORDER.—Ordered that the foregoing remarks be published in the *Punjab Gazette* and communicated to the Conservator of Forests, Punjab, for information and guidance; also that they be forwarded, with copies of the report, to the Government of India, Department of Revenue and Agriculture (Forests).

### REVIEW OF THE ANNUAL REPORT OF THE DEPARTMENT OF LAND RECORDS FOR THE YEAR ENDING 30TH SEPTEMBER 1915.

No. 33 (Rev. & Agri.—Rev.), dated Lahore, 8th March 1916.

From—The Hon'ble Mr. H. D. Craik, I.C.S., Offg. Revenue Secretary to Government, Punjab,
To—The Junior Secretary to the Financial Commissioners, Punjab.

I am directed to acknowledge the receipt of the Annual Report of the Director of Land Records which was submitted with your letter No. 72, dated 20th January 1916.

2. There was a considerable decrease in the number of patwari candidates accepted during the year though the proportion of agriculturists among them was maintained. There was also a falling off in the educational standard of the candidates, particularly among those who were members of non-agricultural tribes. The Financial Commissioner considers that this is no matter for regret so long as agricultural candidates of the required ability are available in sufficient numbers, but it is unsatisfactory that in the year under review the improvement in the educational qualifications of agriculturist candidates noticed last year was not maintained. This falling off in the quality of candidates is reflected in the decreased percentage of those who passed the patwari examination, and though the number of candidates is still ample to fill the posts which fall vacant, it cannot be denied that there is some cause for apprehension and that the time is coming when it may be necessary to make the pay and prospects of patwaris more attractive. In this connection the Director again calls attention to the insufficient number of patwar-khanas and the Financial Commissioner suggests that the subject is one that claims the consideration of Government. The Lieutenant-Governor's views on this question were stated in paragraph 3 of the review of last year's report, but

3130 PGG.

he is impressed by the facts stated in paragraph 9 of the present report and is prepared to reconsider the question after the present financial stringency is relaxed. Meantime there is no harm in the Financial Commissioner pursuing his investigations with a view to offering a reasonable solution of the problem. There are nearly 9,000 patwaris in the Province and the construction and maintenance by Government of accommodation for that number or even a considerable proportion of them is not a matter to be lightly undertaken.

3. The conduct and efficiency of patwaris is reported to be satisfactory, and the number of dismissals and other punishments was considerably lower than in the previous year. Promotion to the post of kanungo is at present almost entirely suspended and must remain so for some time to come, but the Lieutenant-Governor agrees with the Financial Commissioner and Director that more patwaris might be promoted to other posts for which they are eligible.

4. Thirty-four kanungo candidates were accepted during the year, of whom, however, only 16 were members of agricultural tribes. His Honour regrets to learn that there are still districts in which Deputy Commissioners fail to observe the rule requiring 2 out of every 3 candidates accepted to be patwaris as he is convinced that as a rule the promoted patwari makes the best kanungo. Promotion for kanungos is exceedingly slow and during the year only three were promoted to superior posts. His Honour therefore trusts that every opportunity will be taken to appoint kanungos to posts such as that of *sadr wasil baki navis*, readers to Revenue Assistants, &c., when opportunity occurs.

5. In consequence of the remarks made in last year's review instructions were issued by the Financial Commissioner elucidating the existing rules requiring regular and methodical inspections of the work of revenue subordinates and the attention of Collectors was especially invited to them. It is hoped that these instructions will bear fruit, but in the year under review even fewer annual records were checked by the Collector and his assistants than in the previous year, and the entire neglect of this duty in the Mianwali district appears inexcusable. The Lieutenant-Governor recognises the extra and often urgent duties imposed on Collectors and their Assistants in connection with the war, but he trusts that these will not prevent the regular work of the administration being carried on in a normal and efficient manner. The disposal of mutation cases was also not quite satisfactory, and the pending file had increased by the end of the year though new institutions were fewer: for this the inadequate outturn of the extra Naib Tahsildars employed specially for attestation work is largely responsible. In spite of these defects His Honour is glad to learn that in Mr. French's opinion there has been a substantial improvement in the quality of mutation work during the last nine years. It is evident that sufficient time and attention are not given to partition work, as though institutions fell by over 2,000, the number of cases pending at the end of the year showed practically no decrease. The remarks of the Deputy Commissioner, Ambala, quoted in paragraph 18 of the report, as to the unnecessary delays caused by Tahsildars leaving partition work in the hands of their Muharrirs, are, the Lieutenant-Governor fears, of more than local application.

6. His Honour awaits with interest a more detailed report on the experiments now in progress in Lyallpur and Shahpur of utilizing canal patwaris for revenue record work. He entirely concurs with Mr. Diack that the system should prove beneficial to the cultivators.

7. The Lieutenant-Governor desires to acknowledge the success with which the department has been administered by the officers who held charge during the year.

## GENERAL.

### REVIEW OF THE ANNUAL REPORT ON THE PUNJAB COLONIES FOR THE YEAR ENDING THE 30TH SEPTEMBER 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Revenue and Agriculture (Irrigation) Department, No. 23, dated 1st March 1916.*

READ—

Letter No. 16, dated 13th January 1916, from the Senior Secretary to the Financial Commissioners, Punjab, submitting, with the Financial Commissioner's remarks, the Annual Report on the Punjab Colonies for the year ending the 30th September 1915.

REMARKS—

IN the reports on the administration of the three older colonies - Lower Chenab, Lower Jhelum and Chunian—there is little to notice from a purely colonization point of view. The process of allotment has been completed, and the colonies have reached a stage of development which puts them on a level with the older districts of the province. The working of service conditions of tenure and the progress of the acquisition of proprietary rights by peasant grantees will still require particular notice, but the Lieutenant-Governor is disposed to agree with the Financial Commissioner that for the Lower Chenab and Chunian colonies these subjects can be adequately dealt with in the Veterinary, Remount and Land Revenue departmental reports. There are, however, special features in the Lower Jhelum colony which differentiate it from the other two and which make the retention of the separate Colony Report desirable. The Lieutenant-Governor will be glad to consider formal proposals on the above lines in which the last discussion of the matter some 2½ years ago should not be overlooked.

3179 PGG.

2. In spite of the great fall—which however was only temporary—in the price of cotton and the comparatively poor outturn of what promised to be a bumper wheat harvest, the year was a prosperous one in the three older colonies and the agriculturists benefited to the full by the very high prices of food grains and fodder. An irrefutable proof of this advance in prosperity is the steady increase in the price of land sold by the colonists. The system of service grants—horse-breeding on the Lower Jhelum, mule-breeding and maintenance of camel cadres on the Lower Chenab—is working with increasing smoothness and is justified by results. In the Lower Chenab Colony mule-breeding was more successful in the year under review than in any previous year, and there were only 13 cases of lambardars who hold squares on mule-breeding terms defaulting in the three districts of Lyallpur, Gujranwala and Jhang. This result is due partly to the stricter enforcement of the rule prescribing confiscation of defaulters' squares, which was initiated two years ago, but also very largely to the recognition of the profit which can be derived from mule-breeding. The fact that in the Lyallpur District alone the Remount Department were able to purchase nearly 1,100 mules during the year is eminently satisfactory. On the Lower Jhelum Canal horse-breeding continues to show steady progress, but the colony though it furnished 438 remounts during the year has not yet attained the production which may eventually be expected. The success of the horse-breeding conditions of tenure may be gathered from the prices obtained by sale of squares subject to these conditions, the average price—Rs. 4,879 per square—being Rs. 670 higher than the average price realised for squares to which these conditions are not attached. Three of the four grantee camel corps in the Lower Chenab colony were mobilised without great difficulty during the year, but doubts regarding the ultimate success of this form of tenure find expression both in the Financial Commissioner's remarks and in the report of the Deputy Commissioner of Lyallpur. The poverty and shiftless character of the Baloch grantees and the great liability of disease among camels appear to be the chief factors which militate against success, but it should not be impossible to surmount these difficulties, and the practical step of raising the amount of *taccavi* advance that may be given for purchase of camels, which is suggested by the Deputy Commissioner, will receive the favourable consideration of Government if proposals are submitted.

3. The statistics regarding the acquisition of proprietary rights by peasant grantees in the Lower Chenab colony are very striking. They show not only that in allowing such grantees to purchase at a maximum price of Rs. 12-8-0 per acre the State has foregone an enormous potential revenue—this was indeed foreseen by all acquainted with the colony at the time when the orders were passed—but also that those grantees who resell reap an enormous unearned increment. In Lyallpur proprietary rights were acquired in 12,663 acres by peasant grantees during the year. In the same period 10,516 acres so purchased in previous years were resold at an average of Rs. 214 per acre, an advance of 28 per cent. on the average of the previous year—Rs. 167. In the Chunian colony the sale price average Rs. 271 per acre. The reward of those who, a generation ago, had the pluck to emigrate to an unknown land has indeed been rich almost beyond the dreams of avarice, and it is not altogether surprising that the colonists on the Lower Bari Doab should have manifested some disappointment at the less favourable terms there prevalent. It appears that many of the original settlers in Lyallpur who dispose of their grants return to their native districts, but the Deputy Commissioner's report does not indicate whether they have been replaced by men likely to make good colonists. The Lieutenant-Governor fully agrees with Sir Michael Fenton that the large area resold by peasant proprietors in the Lower Chenab colony and the high prices realised by the sale of occupancy rights in the Jhelum colony furnish additional arguments for the policy of withholding proprietary rights in the latter area.

4. Little remains to be said regarding the older colonies. The Lieutenant-Governor has read with interest Mr. Kitchin's account of the temporary cultivation of 12,000 acres in the Jaranwala tahsil by Rai Bahadur Ganga Ram, C.I.E., an experiment which promises to bring profit both to the lessee and to the Military Department, to whom the land will ultimately pass. The prices realised for residential and market sites in the town of Tandlianwala are remarkable, and the rapid rise of this town to commercial importance is a subject for congratulation. Mr. Rust's suggestion regarding the necessity for enforcing communal responsibility in cases of damage to plantations on canal banks will be brought to the notice of the Irrigation Department.

5. The reports on the newer colonies show that in spite of great initial difficulties considerable progress was made during the year both on the Lower Bari Doab and on the Upper Chenab canals. Statements of conditions were issued for all classes of grants on the Lower Bari Doab with the exception of military reward grants. The work of allotment was steadily continued, and in the Lower Bari Doab colony about a third and in the Upper Chenab colony about a half of the estimated allotable land has been disposed of. Areas of 10,503 acres on the Lower Bari Doab Canal and 11,742 acres on the Upper Chenab Canal were sold by auction, prices averaging Rs. 188 per acre in the former colony, and Rs. 179 and Rs. 154 in the Lyallpur and Gujranwala portions, respectively, of the Upper Chenab colony. These prices are considerably below those realised on the Lower Bari Doab canal in the previous year, but considering the condition of the money market, the large extent to which the demand for land has been met by previous auction purchases, and the competition of colonists in the older colonies who are willing to sell their holding, were not unsatisfactory.

6. On the Lower Bari Doab canal 29,723 acres were transferred to the Forest Department for irrigated plantations and 25,083 acres were allotted for cattle farms and regimental horse-runs. Allotment of peasants' grants was taken in hand in January 1915 on a large scale, and 126,500 acres were disposed of, but the work was interrupted partly by the shortness of the canal supplie in a season of unusual drought and partly by a groundless panic as to the nature of the conditions, which resulted in the immediate return of a large number of grantees to their homes. Confidence was, however, ultimately restored by the exercise of tact and patience, for which Mr. Joseph and his staff and the officers of the Irrigation Department deserve great commendation, and the majority of those who had fled returned. In these circumstances, the extension of cultivation from 34,669 acres to 137,909 acres, in spite of an inadequate water-supply, was satisfactory, while the percentage of failed crops though high was not unreasonable. His Honour, however, notes with some concern Mr. Joseph's remarks as to the extent to which the possibilities of irrigation may have been over-estimated, and the results of his soil survey of 419,000 acres. Until that survey is completed it will not be possible to judge how far the actual colonizable area will fall short of the original estimate, but Mr Joseph's report clearly demonstrates the necessity of proceeding with caution. The Lieutenant-Governor agrees with Sir Michael Fenton that a reduction of the area set aside for military grantees must in any event be avoided, even if this has to be done at the expense of other classes. He is glad to note that Mr. Joseph is alive to the danger that only the worst squares in villages now being colonized may be left when military and horse-breeding grantees come to be selected.

The question of the inadequacy of the designed water-supply for the virgin soil of Montgomery and Multan will be referred to the Chief Engineer, Irrigation Department, whose views on the subject are believed to be in substantial agreement with Mr Joseph's. The obvious remedy is that colonization should not be forced on too rapidly, but should proceed *pari passu* with the extension of ample irrigation facilities and the recent opening of

the Upper Jhelum canal will materially assist in this direction. His attention will also be drawn to the Colonization Officer's remarks regarding the necessity for greater variety in the trees lining canal roads—a matter on which the Lieutenant-Governor has already expressed his opinion.

In the Upper Chenab colony no cultivation of the permanently allotted area was possible owing to the delay in completing the Upper Jhelum canal. The stiff nature of the soil, the fact that much of it will receive only kharif irrigation, and the mixed classes from which the grantees are drawn—disappointed applicants for land in the Jhelum colony, and men receiving compensatory grants—all these circumstances must retard the rapid settlement of this small colony, and call for the special and sympathetic attention of all officers concerned.

7. Satisfactory progress has been made in Montgomery in the construction of new roads, and 157 miles of unmetalled and 5 miles of metalled roads were made during the year. In Multan progress has been slower though a considerable amount of preliminary work has been accomplished. Grants were made by Government to the extent of Rs. 1,50,000 in each district for the year 1915-16, and His Honour trusts that the work will be pushed on with vigour. The lay out of new towns and markets for the colony is proceeding on the sound lines recommended by the town-planning conference which met in October 1914. The Colonization Officer is being assisted in this work by an officer of the Public Works Department, and plans have been prepared and approved for a new town at Okara and a market and extension of the old town at Montgomery, while at Okara 150 house sites and 108 shop sites were sold in October 1915. Plans have also been prepared for Khanewal and Chichawatni. Arboriculture is receiving attention, and Government have sanctioned arrangements for setting apart one acre of land in each village as a nursery and an annual grant of Rs. 500 for expenditure on seed and other contingent expenses.

8. His Honour entirely concurs with the Financial Commissioner in his commendation of the steps which have been taken by Mr. Joseph to resist the growth of corruption among subordinate officials in the colony. His Honour desires to invite the attention of the Chief Engineer to the subject and believes it would materially encourage the colonists to set their faces against the system of gratuities—which inevitably tend to become a form of extortion—if printed warnings on the lines adopted by the Colonization Officer are issued annually to all concerned by both the Revenue and Irrigation Departments. As pointed out by His Excellency the Viceroy at the recent opening of the Upper Jhelum Canal at Mangla the success of the colonies depends mainly on the harmonious co-operation of those two Departments and on their securing the confidence of the agricultural classes. Mr. Joseph is entitled to credit for a most interesting report.

9. Sir Michael Fenton's note on the reports now under review was written on the eve of his departure from India, and the Lieutenant-Governor takes this opportunity of acknowledging his great services to the canal colonies in particular and the Punjab in general. On almost every branch of the administration the late Financial Commissioner's commanding intellect and strong personality have left their mark, but his connection with the great colony schemes was particularly close. As Secretary to the Financial Commissioner and Revenue Secretary to Government he was closely associated with the inception of the Lower Chenab colony, and before he left India he had the satisfaction of seeing the labours of a generation brought to a successful conclusion under his supervision as Financial Commissioner. In this task, as in all others, Sir Michael Fenton was perhaps most conspicuous for two qualities, the unswerving courage with which he maintained his convictions and his scrupulous impartiality. He rightly regarded Government as the trustee of

the vast potential wealth of the new colonies, and in deciding the many thorny questions that arose he was invariably guided by a single principle, the distribution of this wealth in the manner best calculated to benefit the province as a whole. Individual claims, however insistent, he sternly rejected, if he thought they conflicted with this ideal. By his departure the Lieutenant-Governor has lost a trusted counsellor, his service a great example, and the Punjab a wise and just administrator.

---

ORDER.—Ordered that the above remarks be printed and circulated with the report; also that they be published in the *Punjab Gazette*, be communicated to the Financial Commissioners and Chief Engineer, Irrigation Works, Punjab, and forwarded to the Government of India, Department of Revenue and Agriculture, with the usual number of copies of the report.

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Offg. Revenue Secretary to Government, Punjab.*

## GENERAL.

### Review of the Annual Report on the Land Revenue Administration of the Punjab for the year ending 30th September 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Department of Revenue and Agriculture (Revenue), No. 51, dated 31st March 1916.*

READ—

The Annual Report on the Land Revenue Administration of the Punjab for the year ending 30th September 1915 forwarded with letter No. 190, dated 25th February 1916, from the Junior Secretary to the Financial Commissioners, Punjab.

REMARKS—

THE favourable climatic conditions of the year are reflected in the very large sown and matured areas of both harvests. The monsoon of 1914, in spite of a long break in August, was on the whole ample and well distributed, over nearly the whole province, and though rain in the late autumn and early frosts did some damage to cotton and sugarcane and reduced the outturn of food crops, the kharif crop as a whole was slightly above the average. The area sown for the rabi was extraordinarily high and the winter rains though late were plentiful. The result was a matured area more than 4 million acres in excess of the normal, but again the outturn was to some extent reduced by stormy weather in March and April and by the excessive temperature when the crop was maturing and being reaped. There was a sharp fall—which has since been made good – in the price of cotton, but with wheat selling at Rs. 3-8-0

per maund and other food-grains at similarly high rates, the year was a distinctly favourable one for the cultivator. This is corroborated by the statistics of revenue collections: less than Rs. 50,000 of the fixed demand for the year were remitted, chiefly on account of damage by floods in the kharif and hail in the rabi, while suspensions amounted to only about 1½ lakhs as compared with an average of 5 lakhs, while over 7½ lakhs outstanding from previous years were collected. The total amount outstanding at the close of the year (30th September 1915) has fallen to less than 4 lakhs, a figure only reached once in the last decade. This happy state of affairs was but of short duration, for the extremely unfavourable agricultural conditions of the current year are producing large balances and considerable suspensions.

2. Re-assessments in Ferozepore, Lahore, Amritsar and Sialkot, and deferred enhancements in Rohtak, Gurgaon and Karnal resulted in an increase in the fixed demand by nearly 4½ lakhs to 217 lakhs. The fluctuating demand, apart from revenue erroneously excluded from the fixed rent roll, also rose by over 10 lakhs to 128 lakhs, in spite of a reduction in three of the western districts owing to local calamities. The enhancement was mainly the result of the extension of irrigation from the Upper Chenab and Lower Bari Doab canals, while an increase of over a lakh in Mianwali was due to the great development of gram cultivation in the Thal. Though receipts from the sale of waste lands and town sites, principally in the Lower Bari Doab colony, and from single harvest leases showed considerable improvement, recoveries on account of purchase of proprietary rights by colonists on the Lower Chenab canal were naturally much lower than in the previous year. They declined by about 16 lakhs, and the net result was a decrease of about 7 lakhs under the head "Other Land Revenue." Receipts under this head totalled over 42 lakhs, while the demand for land revenue proper, both fixed and fluctuating, exceeded 352 lakhs, or 22 lakhs more than in the previous year, the main causes of the improvement being (*a*) extension of canal irrigation, (*b*) reassessment operations in certain districts, and (*c*) the generally favourable character of the season.

3. Although the year was thus one of general prosperity the number of coercive processes issued rose by nearly 44 per cent. to 17,952, of which the Multan Division was again responsible for more than half. The large number of processes issued in Muzaffargarh and Dera Ghazi Khan was the subject of comment in last year's review, and the Financial Commissioner having made special enquiries, is satisfied that it is the dilatory habits of lambardars and of revenue-payers and not inability to pay that are the cause. He also accepts the explanation that the efforts of Collectors to remedy this unpunctuality are responsible for the issue of larger numbers of processes in recent years in both the Multan and Lahore Divisions, and if these efforts are as successful as they were in Attock a very considerable decrease in the number of processes required may be expected in the near future. It is probable, however, that in the south-west Punjab the foolish rumours which prevailed at the outbreak of the war caused a contraction of the accommodation which revenue-payers usually receive from the village bankers, and this was aggravated by the absence in those districts of the Co-operative Credit Societies which help to finance agriculturists. A satisfactory feature of the returns is the fact that in more than two-thirds of the cases of default a writ of demand resulted in payment. More severe measures have seldom to be employed.

4. Settlement operations were in progress in ten districts at the beginning of the year, and were started in Simla during the year. In Dera-Hamirpur and Ferozepore operations were concluded and satisfactory progress was made elsewhere, and by the end of the year assessment reports remained due from only three districts and measurements and record work were uncompleted in only four districts.

In Gujrat, Lahore, Dera-Hamirpur and Kangra the cost of resettlement has exceeded, or is expected to exceed, that anticipated in the forecasts, and operations have lasted somewhat longer than was first expected. The Lieutenant-Governor considers that the extra cost is more than compensated for by the greater thoroughness and precision with which the work is being completed. On the other hand, the financial results have in nearly all recent settlements also exceeded the forecasts, and the Lieutenant-Governor is satisfied that the work of the Settlement Department has throughout the period of Mr. Diack's supervision been carried out with all possible economy and with reasonable despatch. Reference is again made in the report to the congestion of establishment caused by the reduction in the number of districts under re-settlement. The measures taken by the Financial Commissioner, though possibly in some cases hard on individuals, are obviously demanded by the situation. The rates of pay of Naib-Tahsildars were substantially improved during the year, but the prospects of appointment for candidates are at present anything but bright, and the Lieutenant-Governor would be glad if the Financial Commissioner would consider the possibility of deputing selected Naib-Tahsildars to clerical or *quasi*-clerical work under the military authorities, such as the supervision of store depôts. As regards kanungos they should be given preference in making selections for those appointments on the district staff for which they are eligible.

The winding up of so many settlements in recent years has resulted in a considerable fall in the year under review in the amount of litigation between landlords and tenants, and suits for the adjustments of rents of occupancy tenants were less numerous than in any year since 1906. Generally speaking conditions in the province enable the tenants to secure a reasonable share in the increased profits that are being derived from agriculture.

5. Traverses for field surveys in parts of the Sutlej and Chenab riverains were carried out by the Survey Department, and survey operations under the settlement staff were also in progress in Kangra and Simla. With a view to the determination of the inter-provincial boundary on the Jumna two officers were deputed on behalf of the Punjab and Delhi Province and of the United Provinces, respectively, and satisfactory progress has been made towards a settlement of the question. On about half the line the agreement of estates involved has been obtained to a fixed boundary of proprietary rights with which the provincial boundary will coincide. For the remainder, though it is hoped that subsequent efforts may be successful in securing similar acceptance of a proprietary boundary, the Punjab Government has agreed that power should be taken by legislation compulsorily to determine a fixed boundary of estates, and the question is now under the consideration of the Government of the United Provinces.

6. The Lieutenant-Governor is glad to note that the recommendations of the Clerical Establishments Committee in regard to district record rooms have been adopted with satisfactory results. The new rules for the copying agency are still under the consideration of Government.

7. Canal irrigation from both major and minor works was generally satisfactory. The supply in most of the perennial canals was sufficient, and irrigation on the Upper Chenab and Lower Bari Doab canals was, as already noted, largely extended. The tightening up of the supply on the Lower Chenab canal with a view to a better distribution of water and the prevention of water-logging has been carried out with a skill and tact which reflect credit on the Irrigation Officers responsible. An experiment in the substitution of a fixed for a fluctuating land revenue demand and canal dues on the Shahkot Distributary of this canal was sanctioned, but has had to be postponed owing to silting up of the channels until the distributary can be

remodelled and improved modules installed. The Sutlej inundation canals watered an area much in excess of the normal, and those from the Chenab also did well.

Among minor works the Rangoi canal in Hissar, the Ravi canals and the Kitchin canals were unusually successful. It has now been decided to take the latter system, including the subsidiary Mehdi Khan canal, under direct Government control, and His Honour is convinced that this arrangement will be for the benefit of the irrigators. The Grey canals in Ferozepore also had a prosperous year, but considerable expenditure is required to put them in a sound condition. The zamindars have now agreed to a slight increase of the *abiana* and Government has accordingly sanctioned an annual grant of Rs. 25,000 for 5 years: an equal sum has been voted by the District Board, and with these resources and the new scheme of management which has been introduced a great improvement may be expected. There was a considerable extension of the area matured with the aid of the Gurgaon bunds. Proposals for the improvement of these works have been formulated, but have been objected to by the Sanitary Commissioner as likely to have a bad effect on the health of the district headquarters, and the question is still under consideration. The new Nammal dam irrigated a considerable area, but the system of distribution is still faulty. On the whole the working of these canal systems under district management has been of material benefit both to Government and to the people, and the Lieutenant-Governor will be glad to encourage and to support—when financial conditions improve—the initiation of further schemes of the nature where conditions are favourable.

8. There was little demand for loans for land improvement, less than 2 lakhs being advanced, of which the Ferozepore district took over one-third. Though in some districts loans from Co-operative Societies are taking the place of advances from Government the Lieutenant-Governor considers that the field of useful employment for the latter is still very wide, and that without creating an artificial demand much more could be done to promote improvements by a judicious loan policy. It has in several places been brought to his notice that the extension of the iron form of Persian wheel, which has done so much to increase the efficiency of well-irrigation in some of the central districts, is hampered by the heavy initial cost. Another form of agricultural improvement which requires considerable initial outlay is the sinking of the tube strainer in irrigation wells, and this would be a most suitable object for advances. Indeed experience gathered from many directions proves that a wise and liberal policy in the matter of loans is beneficial alike to the Government and the people specially in districts where wells and embankments play a large part in agriculture. The wonderful development within the present generation of the Jullundur district, which was believed to have reached the limit of agricultural expansion 30 years ago, is mainly the result of the sustained encouragement of well-sinking by successive Deputy Commissioners and a similar policy is apparently now being followed in Ferozepore with equally good results. Advances for the purchase of seed and bullocks amounted to about the same sum as in the previous year. There was a considerable increase under both heads in the balances of principal and interest overdue at the end of the year, and Multan was again responsible for large outstandings. The Lieutenant-Governor trusts that the Collector will give the matter special attention in the current year.

9. The extension of irrigation in Multan and Montgomery is rapidly reducing the area of waste in respect of which *tirni* dues are paid: suitable arrangements have, however, been made by the Financial Commissioner for the gradual reduction of the canal *tirni* demand concurrently with the colonisation of the waste. His Honour is pleased to notice that schemes for the browsing of the 3 camel corps maintained at Montgomery and Multan have been finally approved.

10. The amount of land which changed hands during the year by mortgage, redemption of mortgage and sale was less than it has been for the past ten years: the excess of the area redeemed over the area mortgaged was, however, maintained, and agricultural tribes were on the whole gainers by the alienations reported. The statistics in Statement No. XXVII go back to 1901-02, and it is very satisfactory to find that notwithstanding the great expansion of cultivation in the meantime, not only the proportion but the actual area of land under mortgage is now less than in any year of which we have a record. The average price realised for land sold was Rs. 180 per acre, as against Rs. 249 in the previous year: in 1913-14 the price was inflated by speculative sales in the suburbs of Lahore, and some doubt was felt as to the accuracy of the returns. The Financial Commissioner has, however, satisfied himself as to the correctness of the figures, but the speculative fever abated during the year under review, and though a larger area changed hands, prices were much lower. In practically every district where the statistics were not affected by urban sales, the value of land is reported to have risen during the year. In the Lower Chenab colony purely agricultural land fetched Rs. 217 per acre, while undeveloped land on the Lower Bari Doab canal was auctioned for Rs. 188 per acre. There is therefore no reason to distrust the returns of sales which give an average sale price of Rs. 180 per acre for all classes of land. The sale value represents 134 years' purchase of the land revenue. In 1896-97 it represented, only 66 years' purchase, and its steady rise in the last 20 years is a remarkable testimony to the leniency of the demand and the general growta of agricultural prosperity. Ten years ago the selling price was Rs. 86 per acreh so that there has been a rise of about 109 per cent. In the same period the, mortgaging value of land has risen from Rs. 68 to Rs. 130 per acre. This extraordinary appreciation of value has taken place since the passing of the Alienation of Land Act, though doubtless the general recognition of the lightness of our standards of assessment is a contributing cause, and it is satisfactory to find that new methods of evading the Act have not been discovered. The Lieutenant-Governor agrees with the inference drawn by the Financial Commissioner from the statistics for sales, mortgages and redemptions, that evasion is generally either impracticable or unprofitable. His Honour would be obliged if next year's report were to contain somewhat more detailed information regarding the working of the Redemption of Mortgages Act.

11. There was a slight increase in the number of institutions in the courts of Revenue Officers, but the pending file at the end of the year was about the same. His Honour is glad to observe the reduction of arrears which has been effected in Shahpur. The pending file in the courts of the Financial Commissioner and of the Commissioners of all divisions except Rawalpindi is now inconsiderable.

12. The Lieutenant-Governor desires to acknowledge the work of the revenue staff, which has maintained its usual high level of efficiency during a year of many anxious distractions and pressing pre-occupations. His thanks are also due to the Financial Commissioners for their able administration of the Department and for an interesting report.

---

ORDER.—Ordered that the above remarks be printed and circulated with the Report, that they be published in the *Punjab Gazette*, communicated to the Financial Commissioners, Punjab, and forwarded to the Government of India, Department of Revenue and Agriculture, with the usual number of spare copies.

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Offg. Revenue Secretary to Government, Punjab.*

### REVIEW OF THE RETURN SHOWING THE RESULTS OF MEASURES ADOPTED IN THE PUNJAB FOR THE DESTRUCTION OF WILD ANIMALS AND VENOMOUS SNAKES IN THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home (General) Department,* No. 166 *Genl.* 2, *dated the* 11*th April* 1916.

READ—

The return showing the results of measures adopted in the Punjab for the destruction of wild animals and venomous snakes in the year 1915.

REMARKS.—The total number of persons reported killed by snakes in 1915 is 1,590 which is the highest figure yet recorded. The increase is particularly noticeable in the Ambála Division, where in the district of Hissar alone as many as 290 deaths were ascribed to snake-bites. The very large number of 7,560 snakes were brought in during the year in Gujránwála, and over 2,300 in Siálkot, a satisfactory result of the special campaign mentioned in last year's report.

2. Only 5 persons were killed by wild animals,—the smallest figure since the 3 deaths reported in 1903. Two persons are reported to have been killed by tigers, both in the Hoshiárpur District. These are the first deaths from tigers reported since 1909.

146 PGG.

3. The number of casualties to cattle is returned as 1,247 as compared with 2,225 last year. The great majority, all but 20, of these occurred as usual in the hill district of Kángra (783) and its adjacent district, Hoshiárpur (282) and in Miánwáli (162). Leopards destroyed 783 head of cattle in Kángra, 250 in Hoshiárpur and 10 in Miánwáli; and wolves 152 in Miánwáli and 32 in Hoshiárpur. Not a single casualty from bears was reported this year, as compared with 225 last year, and 738 the year before. His Honour fears that the statistics in this respect are not very reliable.

4. The amount paid in rewards for the destruction of wolves has fallen considerably, Rs. 1,272 having been paid out in 1915, as compared with Rs. 2,601 in 1914. This decrease is no doubt the result of the extra vigilance against faked jackal heads and skins inculcated in local officers during the last two years, and is particularly noticeable in the figures for the districts of Lahore, Miánwáli, Multán, Muzaffargarh and Dera Ghází Khan which have fallen from a total last year of Rs. 2,034 to Rs. 561 this year.

Rs. 502 were paid for the destruction of 74 bears (about half the number of last year) and Rs. 982 for 135 leopards. Kángra District accounted for all the bears, and 97 out of the 135 leopards; 14 of the latter having been killed in Hoshiárpur. Rewards were given this year for 1 tiger in Kángra and 1 in Ambála.

5. The number of new licenses issued in forms XVI, XVII and XVIII of Schedule VII of the Indian Arms Rules was 3,879, and the total number of such licenses current during the year was 17,959. These figures are considerably higher than those of the preceding year.

---

ORDER.—Ordered that the foregoing remarks be published in the *Punjab Gazette*, together with the statements showing the results of the measures for the destruction of wild animals and snakes; and that a copy be forwarded to all Commissioners of divisions in the Punjab for information and guidance.

Ordered also, that a copy of the resolution be forwarded to the Government of India in the Home Department, together with a copy of the statements.

By order of His Honour the Lieutenant-Governor of the Punjab,

C. A. BARRON,

*Chief Secretary to Government, Punjab.*

## GENERAL.

### REVIEW OF THE REPORT OF THE CHEMICAL EXAMINER TO GOVERNMENT PUNJAB, FOR THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home (Medical) Department, No. 116 Medical 1, dated the 9th May 1916.*

READ—

A letter from the Inspector-General of Civil Hospitals, Punjab, No. 1898, dated 1?th April 1916, submitting, with his remarks, the Report of the Chemical Examiner to Government, Punjab, for the year 1915.

REMARKS.—There was a further substantial decline in the work of the Chemical Examiner during the year, the number of cases investigated being 1,488 with 4,942 articles, as against 1,833 cases with 5,511 articles in 1914. The decrease in the number of cases investigated was general, although the number of articles examined in human poisoning cases and for analytical purposes shows some advance. The percentage of cases detected was higher under all heads than in the previous year.

2. Human poisoning cases represent nearly 50 per cent. of the medico-legal work. In spite of the remarks in last year's review and report there was no decrease in the number of cases submitted unnecessarily for examination. Twenty-one cases are reported in Appendix I in which the cause of death was other than poisoning, and where the fatal occurrence was due to drowning or

408 PGG.

injuries received from being run over by a train, the futility of a reference to the Chemical Examiner would appear obvious. Similar lack of common sense in adding spirit to *viscera* as a preservative in cases where death was suspected to be caused by acute alcoholic poisoning is commented upon as occurring every year. The incomplete and careless fashion in which many cases were submitted for examination is also unsatisfactory, and His Honour trusts that the action which is being taken by the Inspector-General of Civil Hospitals to remedy this state of affairs will be successful.

3. Opium continues to be the most common form of poison, and was found in 36 per cent. of the cases of human poisoning detected. Arsenic was discovered in about 30 per cent. of the cases. The decrease in the use of this poison, which was noticed as an outstanding feature of last year's report, was not maintained in 1915, and there was a small rise in the number of cases in which it was detected. In cattle poisoning cases, however, it was found both in fewer cases and in a smaller percentage of the total number of cases.

4. The greater use made of the services of the Imperial Serologist at Calcutta is satisfactory, but the number of blood stain cases submitted to him was only about one-third of the number referred to the Chemical Examiner. The attention of all officers concerned should again be invited to the superior accuracy of the serological methods.

5. The Lieutenant-Governor's acknowledgments are due to Lieutenant-Colonel Black and his Assistants for the continued efficiency with which they have discharged their duties during the past year.

---

ORDER.—Ordered that a copy of the foregoing remarks be forwarded to the Inspector-General of Civil Hospitals, Punjab, for information.

Ordered also, that a copy of the report, the Inspector-General of Civil Hospital's letter and the foregoing remarks be forwarded to—

(1) The Government of India, Home Department, for information;

(2) The Registrar, Chief Court, Punjab, for the information of the Hon'ble Judges;

(3) All Commissioners of Divisions, Deputy Commissioners and, Divisional Judges in the Punjab, for information; and

(4) The Inspector-General of Police, Punjab, for information.

By order of His Honour the Lieutenant-Governor of the Punjab,

A. B. KETTLEWELL,

*Additional Secretary to Government, Punjab.*

---

## REVIEW OF THE STATISTICAL TABLES OF THE PUNJAB LUNATIC ASYLUM FOR THE YEAR 1915.

---

No. 113-Medl.-l, dated Lahore, 24th May 1916.

From—L. FRENCH, Esquire, C.I.E., Offg. Additional Secretary to Government, Punjab,

To—The Secretary to the Government of India, Home Department.

I AM directed to forward, for the information of the Government of India, the statistical tables of the Punjab Lunatic Asylum for the year 1915, with a note by the Inspector-General of Civil Hospitals, Punjab, and to convey the following remarks of the Lieutenant-Governor.

2. The population of the asylum continues to increase, and the daily average strength of 763·50 was the highest on record. New admissions amounted to 311, an increase of 47 on the previous year. There was a falling-off in the number discharged cured, but 52 cases 'mentally improved' were transferred to the care of friends as against only 19 in 1914.

3. The year was a healthy one: there was no epidemic, and both the death rate and daily average sick rate were lower than in any year since 1910. There were no serious cases of escape or assault.

4. During the year an increased scale of pay of the attendant staff of the asylum was sanctioned. Electric lighting and fans were installed, extra cubicular accommodation was provided, and the congestion of the female asylum was relieved by the addition of four annexes.

5. Hemp drugs were as usual the cause of insanity in by far the greatest number of cases admitted during the year, heredity and epilepsy being the next most important ætiological factors.

6. His Honour regrets to observe the large number of typographical errors which disfigure some of the statements appended to the Report and trusts that the Inspector-General will see that these are avoided in future. His thanks are due to Major Ward for the care and attention with which he discharged his duties as Superintendent in addition to his heavy duties as Superintendent, Central Jail, and also to his assistant, Lieutenant Fleming, I. S. M. D. He has also to acknowledge once more the devotion of the Franciscan Sisters in their self-imposed labour of love.

L. FRENCH,

*Offg. Additional Secretary to Government, Punjab.*

## PART II.
## GENERAL.

### REVIEW OF THE REPORT ON THE ADMINISTRATION OF JAILS IN THE PUNJAB DURING THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home (Jails) Department, No.* 88 *Jails, dated Simla, the* 30*th May* 1916.

READ—

The Report on the Administration of Jails in the Punjab during the year 1915.

REMARKS.—The year 1915 was for the Jail Department one of even greater strain than its predecessor. The number of prisoners admitted into jails rose by more than 10,000, and the average daily population by nearly 2,000. With admissions exceeding 50,000 and a daily population of nearly 17,000 prisoners it would not have been surprising if there had been some falling off in the standard of efficiency, especially as among the admissions were several hundred men—many of them dangerous and desperate—connected with the revolutionary movement, while nearly all the most experienced Superintendents had been recalled to military duty. The report shows that in spite of these circumstances the standard of administration and discipline was not seriously impaired, and the fact reflects great credit on the officers and staff of the department, who responded loyally to the special demands made upon their energy.

475 PGG

2. The question of accommodation is one of increasing difficulty. Existing jails are designed to hold 14,729 prisoners, but the average number to be provided for throughout the year was nearly 2,000 in excess of that figure. Paragraph 45 of the report shows that the situation has been to some extent met by confining prisoners at night in tents and workshops, and the health of the jail population does not appear to have suffered through over-crowding except in a few isolated instances. Nevertheless it is clear that the provision of an additional Central Jail is now a matter of considerable urgency, and if a suitable site can be selected the Lieutenant-Governor will endeavour to provide funds for its construction as soon as the exigencies of the financial situation allow.

In consequence of the removal of the head-quarters of the Shahpur District to Sargodha, a new subsidiary jail was opened and occupied at the latter station, the old District Jail at Shahpur being used for the accommodation of tubercular prisoners. This though only a temporary expedient has been successful in reducing the number of cases treated for tuberculosis from 374 (with 111 deaths) in 1914 to 296 (with 73 deaths) in 1915. Specialised treatment under a whole-time medical officer is provided at Shahpur.

3. Paragraph 5 of the report shows that though 355 prisoners sentenced to transportation were admitted to jail, only 138 were actually transported to the Andamans, and at the close of the year the number of prisoners sentenced to transportation, but still detained in the Punjab, was 1,220, or 224 more than on the last day of 1914. A reference was recently made to the Government of India on the subject of the executive rules laying down the qualifications for transportation. The question is a pressing one at the present moment not only because of the unprecedented numbers of prisoners now in the Punjab Jails but also on account of the risk that discipline may be subverted owing to the contamination of the ordinary jail population by the presence of so many hardened or dangerous criminals.

4. The Lieutenant-Governor is not disposed to agree in the Inspector-General's suggestion, based on recent legislation in England, to allow all persons sentenced to fine a term of not less than 7 days before committal to prison within which to pay their fines. In England the social stigma attaching to imprisonment acts as a strong inducement to pay. In India this motive is less powerful and it is probable that a large proportion of fines are realised only because the offenders recognize, after a short experience, that a release from jail discipline is worth some pecuniary sacrifice. Moreover, as pointed out in the report, section 388 of the Criminal Procedure Code, already allows the courts a wide discretion regarding the enforcement of sentences of fine and it is doubtful if fresh legislation is justified.

5. One hundred and fourteen juvenile offenders under 16 years were admitted to jail, a higher number than in any year since 1903. In the case of 84 the sentences were for periods of 6 months or less, and Major Ward reiterates the complaints made by his predecessor regarding the insufficient use of the Reformatory and Whipping Acts and of section 562 of the Criminal Procedure Code. While entirely agreeing that short sentences of imprisonment are in principle unsuitable for youthful offenders, His Honour thinks it probable that in the majority of cases it will be found that the Courts had no option but to pass such sentences. A statement giving details of 78 cases of juveniles admitted to jail during 1914 was recently sent to the Hon'ble Judges of the Chief Court for enquiry and report. After making careful investigations the Judges reported that the sentences were inappropriate or the explanations of the magistrates unsatisfactory only in 21 cases, and in some of these the sentences had been corrected on appeal. The Lieutenant-Governor on this report accepted the Judges' conclusion that in the majority of cases the action of the magistrates was not open to serious criticism, and he leaves it to the Judges to issue such further instructions, if any, as they may deem necessary.

6. In dealing with the Borstal Central Jail, where adolescent prisoners from 16 to 23 years of age are usually confined, the Inspector-General has quoted from the report of the Borstal Committee for the Wakefield prison some interesting passages regarding the futility of short sentences, and has alluded to the English Criminal Justice Administration Act of 1914, which extended the minimum sentence from one to two years and the period of probationary release from 6 months to 1 year. The Lieutenant-Governor is inclined to agree that the time is rapidly approaching when legislation on similar lines should be undertaken in India. He believes that it is the general opinion of those who have been in charge of Borstal institutions, both in the Punjab and in other Provinces, that it is hopeless to expect any permanent reformation of the youthful criminal in less than two years. But public opinion in India has yet to realize the advantages and objects of the Borstal system for the proper attainment of which time is an essential feature, and the majority of those best qualified to advise on the subject are at present absent from India. On their return His Honour trusts that further progress will be possible in this measure of reform, which cannot but appeal to all interested in the social welfare of the country.

Experience in England shows that the co-operation of philanthropic bodies and individuals with the authorities is essential for the success of the Borstal system, and His Honour regrets to say that such co-operation is still but rarely forthcoming in the Punjab. The Salvation Army is entitled to all credit for what it does with the limited means at hand in its Danepore settlement, but as pointed out by the Commissioner of Lahore in the remarks quoted in the report, it cannot provide work for all the lads who might well be released on probation provided they could be guaranteed regular employment. Invaluable help could be given by a non-official committee which would undertake the care of youths after release. A wide field exists here for the assistance of philanthropic individuals or bodies and employers of labour, and steps will be taken to bring Mr. Casson's suggestions, in which it is understood that the Inspector-General concurs, to the notice of the railway authorities and other industrial concerns in a position to help towards their realization.

7. The number of under-trial prisoners admitted during the year reached the unprecedently high figure of 25,530 or 7,187 more than in the previous year. This is accounted for by the conspiracy cases in the Central Punjab, and the outbreak of dacoity in the south-western districts, where over 4,000 under-trial prisoners had to be provided for in the early summer months. In spite of the creation of two Special Tribunals the pressure of work on the ordinary criminal courts was severe, and in the circumstances it is no matter for surprise that the average period of detention rose from 23 to 25 days, the 1913 figure.

8. Twenty-one prisoners or 4 more than in 1914 escaped, but 15 of them were recaptured. Only 3 of the escapes were from inside jails, and it is curious that the delinquents should in all cases have been convict officials, a class which Major Ward says does not, as a rule, betray the trust imposed in it. It is satisfactory that 2 of the 3 men were recaptured and severely punished. The number of escapes from gangs working outside the jails was exceptionally high.

That discipline was in other respects well maintained is proved by the fall of more than 3,000 in the number of jail offences reported, and the corresponding decrease in the number of punishments that had to be inflicted. Since 1908, when the number of punishments totalled 59,948, the decline has been steady and progressive. In 1915 the number was 24,492. The explanation given in paragraph 24 of the report ascribes the change to better supervision both in the workshops and in the quarters, where cells have to a large extent replaced the

old-fashioned sleeping barracks, to greater tact in dealing with prisoners and to the use of more effective punishments. The Lieutenant-Governor has no doubt that this explanation is correct. It is, he thinks, a matter for satisfaction that during a period when our jails contained an unusually large number of reckless and dangerous criminals, the steady progress in this respect of former years should not have been interrupted.

9. The increase in expenditure from 11·61 to 13·78 lakhs is sufficiently accounted for by the larger number of prisoners and the high prices of foodstuffs and other articles owing to the war. The average gross cost of each prisoner's maintenance rose from Rs. 78-3-7 to Rs. 82-12-11.

The profits from jail factories show a slight falling off from 2·78 to 2·76 lakhs and the average earnings per head fell from Rs. 20-13-0 to Rs. 19-0-0. There were, however, special causes to account for this decline, the principal being the purchase for the Lahore Central Jail of machinery, tools and plant costing more than half a lakh, the excessive rise in price of raw materials and the difficulty of providing remunerative labour for the exceptionally large number of prisoners. The latter difficulty could apparently be overcome by expanding those industries, such as the manufacture of *chicks* and *munj* matting, that require few special appliances. Enquiry has been made from the Army Department whether jail labour could usefully be employed during the war in helping to provide for military requirements. His Honour endorses the Inspector-General's commendation of the officers mentioned in paragraph 41 of the report as having devoted special efforts to obtaining good results from the factories under their charge.

10. The number of prisoners admitted to hospital rose from 9,119 to 12,361 and the average number of sick from 486 to 661. This appears to have been mainly due to the unhealthiness of the summer caused by the failure of the monsoon rains, but in the case of one or two jails, *e.g.*, Rawalpindi and Jhang, temporary and unavoidable over-crowding is said to have been a contributing cause. Pneumonia claimed 109 deaths as against 51 in the previous year. In Montgomery Central Jail, where the rate of sickness is considerably above the average, the season was a particularly unhealthy one and epidemics of malaria and pneumonia spread from the civil to the jail population. But the death rate both in this and other jails shows a decline, the provincial average being 25·41 *per mille* as compared with 25·49 in 1914. The segregation of tubercular prisoners in a special jail is doubtless mainly responsible, as the death rate from this disease fell from 8·24 to 4·97 *per mille*. The provincial rate is still, however, much above the average of past years and the Lieutenant-Governor trusts that all possible measures will be taken to lower it.

A high tribute to the improved sanitary conditions in the jails is furnished by the fact that in a year in which plague carried off nearly 200,000 persons or one per cent. of the free population and cholera was widely diffused over the Province, there were only 2 deaths from plague and none from cholera among the jail population.

In regard to the unfortunate outbreak of cerebro-spinal meningitis in Multan Central Jail the Lieutenant-Governor is disposed to agree with the Inspector-General in rejecting the explanation of the Medical Officer that it was due to the jail being made a dumping ground for the ailing and decrepit and that "mental strain and exhaustion from hard labour prolonged beyond the prescribed period" were predisposing causes. The first part of the explanation is entirely refuted by the remarks of the Superintendent, quoted in paragraph 46 of the report, and it is absurd to suppose that jail labour can involve any mental strain whatever. Moreover of the 18 prisoners affected 15 were on light or medium labour till admitted to hospital.

11. The department was administered for nearly the whole of the year by the late Lieutenant-Colonel G. F. W. Braide, I.M.S., who died on 30th December. The Lieutenant-Governor's regret at the untimely death of this able and devoted officer, and an appreciation of his great services to the administration found expression in the Gazette resolution of 5th January 1916, which is quoted in the opening paragraph of the report. Colonel Braide has been succeeded as Inspector-General by Major E. L. Ward, who has written an interesting report and who will, His Honour is confident, maintain the high standard of discipline and efficiency set by his predecessor. As has already been remarked, the officers and staff of the department are entitled to credit for successful work in a year of exceptional stress. In particular the Lieutenant-Governor wishes to record his acknowledgments to those Assistant Commissioners whose employment in charge of central jails was necessitated by the exigencies of the service, and who showed conspicuous zeal anl adaptability in the discharge of unaccustomed and somewhat irksome duties.

---

O DER.—Ordered that a copy of the Report with Review be forwarded to the Government of India in the Home Department and that a copy of the Review be forwarded to the Registrar, Chief Court, Punjab, for the information of the Hon'ble judges, and to the Inspector-General of Prisons, Punjab, for information and guidance.

Ordered, also, that the Review be published in the *Punjab Government Gazette* and circulated with the Report as usual.

By order of His Honour the Lieutenant-Governor of the Punjab.

H. D. CRAIK,

*Offg. Revenue Secretary to Government, Punjab.*

### REVIEW OF THE REPORT ON THE ADMINISTRATION OF THE ESTATES UNDER THE COURT OF WARDS IN THE PUNJAB FOR THE YEAR ENDING 30TH SEPTEMBER 1915.

No. 385 (Rev. & Agri.—Genl)., dated Lahore, 6th June 1916.

From—The Hon'ble Mr. H. D. Craik, I.C.S., Offg. Revenue Secretary to Government, Punjab,
To—The Secretary to the Government of India, Department of Revenue and Agriculture.

I am directed to submit for the information of the Government of India a copy of the report on the administration of the estates under the Court of Wards in the Punjab for the year ending 30th September 1915.

2. The number of estates under the charge of the court was 46 both at the close and at the beginning of the year, two being taken under management and two released. Of the estates released the more important was that at Sheikhupura in the Lahore District, which was placed under the court in 1900 with a debt of over 6½ lakhs. This debt has now been paid off in full and the assets, other than the value of the Jagirs, have risen during the 14½ years of superintendence by 2⅓ lakhs.

3. Over six lakhs of rupees were invested in land. Nearly the whole of this sum represents purchases in the Lower Bari Doab Colony, where several estates now have very large holdings. The Lieutenant-Governor is glad to see this close connection between the Court of Wards and the new Colony, as he is convinced that a number of large estates under careful and scientific manage-

508 PGG

ment cannot fail to have a beneficial effect on the Colony as a whole. One and a half lakhs of rupees were invested in the Rupee loan of the Government of India. A substantial reduction was effected in the liabilities of estates ; accounts were well kept and the management was generally economical and satisfactory. The recoverable arrears of rent, however, still amount to over 2 lakhs, of which more than a quarter are due to the Sher Shah estate. This is said to be the result of the system of farming to middlemen which is being abandoned and it is to be hoped that some improvement will be effected.

The financial position of the Atari estate presents great difficulties on account of the burden of debt in which it has been involved by the extravagance of the present holder. This question is being separately considered in consultation with the Financial Commissioners.

4. The establishment of a Central Co-operative Credit Society in Mamdot to finance village societies among the Nawab's tenants was an important development of the year. It is to be hoped that other estates which have a large body of tenants will follow this example.

5. The amount spent on permanent improvements showed a satisfactory increase. It includes a sum of nearly Rs. 35,000 for the provision of rat-proof houses for the tenants of the Hardit Singh estate on land purchased in Montgomery. As the Financial Commissioner has remarked, it is undoubtedly right that a wealthy estate should be generous in matters connected with the well-being of its tenants, and His Honour, while deprecating anything in the nature of extravagant schemes, trusts that every effort will be made to set a high example of enterprise on up-to-date lines in the management of Colony properties. Expenditure on tube-wells in non-colony districts is another direction in which estates under the court may well lead the way. Experimental farms in the Mamdot and Kot estates are already doing useful work and arrangements have been made for the accounts of these farms to be included in future reports.

6. The Lieutenant-Governor will ask the Financial Commissioners to consider the possibility of giving some of the younger wards and their relatives a course of training in practical agriculture at the Lyallpur College, as he thinks that such a course would be of great value to young men who will eventually have to manage large estates.

### REVIEW OF THE REPORT ON THE SANITARY ADMINISTRATION OF THE PUNJAB FOR THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home (Medical and Sanitary) Department, No.* 83-*Sanitary*-1, *dated* 5*th July* 1916.

READ—

The Report on the Sanitary Administration of the Punjab for the year 1915 by Colonel H. Hendley, I.M.S., Officiating Sanitary Commissioner, Punjab.

REMARKS.—The character of the seasons during the year had a marked effect on the health of the province. Unusually heavy rain in March and the beginning of April retarded the development of normal hot weather actions, thus prolonging and accentuating the severity of the worst epidemic of plague since 1907. On the other hand, the practical failure of the monsoon and consequent abnormally dry weather during the remainder of the year resulted in the disappearance of plague in June and its reappearance later in the year only on a very small scale. To the same cause was due the almost entire absence of malaria in epidemic form. The price of food grains remained unusually high throughout the year.

2. There was a fall in the general birth-rate of 2·7 *per mille* as compared with the previous year. The birth-rate in 1914 was, however, exceptional, and a much larger decrease was to be expected than actually occurred. Compared with the average of the previous five years the rate was

only 1·3 in defect, while in five districts it was actually higher than in 1914. The decrease was greatest in the Gujrát and Multán districts, amounting to over 5 *per mille* compared with the quinquennial average and to 7·8 and 6·8, respectively, compared with the previous year. The fall is attributed partly to the effect of plague and partly to the absence on military service of so many young men and men in the prime of life. In Rohtak and Gurgaon, however, the rates were over 50 *per mille*,—an excess of 26 *per mille* over the death-rates. As the former is one of the best recruiting districts in the Province too much stress cannot obviously be laid on the second of the reasons given for the reduction in the number of births.

3. There was a considerable rise in the death-rate, from 32 to 36·3 *per mille*. This was chiefly due to plague, but cholera and respiratory diseases were contributary causes. The figures with regard to infant mortality, however, show a very marked improvement. Calculated on the number of births during the year the mortality among male infants works out at 188·02 and among female infants at 189·17 as compared with 208·98 and 211 38, respectively, in 1914—figures which themselves were better than those of the previous year. March, April and May were the unhealthiest months, plague being then at its height, while the months from September to December, usually marked by an epidemic of malaria, were healthier than any other period of four months in the year. The death-rate was highest in the Rawalpindi District, and was above the provincial rate in eleven other districts. It was less than 20 *per mille* in the Dera Gházi Khan and Simla districts and less than 30 *per mille* in ten other districts.

4. The general death-rate in towns was practically the same as that in rural circles, but there were considerable differences in respect of the various causes of death, the rural rate for plague being 6·03 in excess of the urban rate, while respiratory diseases accounted for 3·24 *per mille* more deaths in towns than in country circles. In the smaller towns of the province the variations in the rates were very marked, ranging from 2·40 in Gojra to 68·96 in Gohána. Sixteen other towns had rates of over 50 *per mille*, the high mortality in most cases being due to plague. Of the three principal towns in the province, Amritsar was the most unhealthy with a death-rate of 43·5 as compared with 33·59 in Lahore and 33·14 in Multán. The chief cause of this difference is to be found in the high mortality from respiratory diseases which amounted to 14·44 in Amritsar as compared with 4·97 in Lahore and ·027 in Multan.

5. Inspection of birth and death registers revealed the normal percentage of omissions. In the Government of India resolution on scientfic sanitation which was published in 1914 stress was laid on the want of complete and accurate vital statistics as constituting an impediment in the way of sanitary reform. The remarks of the Government of India in this connection were brought to the notice of local bodies, and a project has been approved for obtaining accurate registration in a selected area by means of a special staff. The realization of this project, however, awaits the return of normal financial conditions.

6. The number of deaths registered as due to cholera was 13,196, the largest number in any year since 1903. Deaths were reported from every district in the province, 69 towns and 1,678 villages being infected. The Ferozepore and Lahore districts with 2,890 and 2,657 deaths, respectively, were the worst sufferers, while among towns the number of deaths was highest in Kasúr, Gohána, Amritsar, Lahore and Kunjah. As in 1903 the chief cause of the outbreak is to be found in the infection spread by pilgrims returning from the great Hardwar Kumb fair, but a further centre of diffusion was the Ghariala fair in the Kasúr Tahsil, while in the Gujrát District the

epidemic started from local causes in two villages, in one case being due to the eating of the flesh of a diseased ox, and in the other to the drinking of water from a polluted well in a graveyard. The experience of the year has thus still further emphasised the importance of controlling the sanitary arrangements at all large fairs, and in this direction good work is being accomplished. Special arrangements are made at the larger fairs under the supervision of the Additional Deputy Sanitary Commissioner, and during the year schemes for the supply of pure water to the fair areas at Gu[illegible] Shah and at Núrpur in the Ráwalpindi District have been approved and assisted by grants-in-aid from the Sanitary Board.

7. Only 1,694 deaths were due to small-pox, the lowest number recorded since registration of deaths was introduced. Eleven districts of the province were practically free from the disease. The death-rate from fevers was, however, again very high, amounting to 14·73 *per mille*, though this figure represents an improvement on the previous year which is accounted for by the almost entire absence of malaria in epidemic form. The rate was proportionately highest in the Multan Division, where 56,752 deaths out of a total of 82,268 were attributed to this cause. No satisfactory explanation is afforded of the very large increase from 9·55 to 30·12 recorded in Murree which had a higher rate than any other town. On the whole, the towns shared in the general decrease but the rate remained high in Khángarh, Karor, Bhakkar, Shujabad, Kamália and Alipur.

8. It has already been observed that the epidemic of plague with which the Province was afflicted in 1915 was the worst since 1907. Twelve districts suffered severely, and a total of 244,104 deaths was recorded. The epidemic had commenced in the latter portion of 1914 and the full effects were felt in the first half of 1915. There was, however, but little recrudescence in the latter half of the year owing to the abnormally hot weather and the efforts of the plague staff in treating the worst infected areas. His Honour is glad to observe that despite the severity of the epidemic the special staff were able to afford general medical relief to a large number of persons. He is convinced that no better means exist of gaining the confidence of the people and thus facilitating the introduction of the various measures by which plague can be effectively controlled if not overcome. It is also gratifying to find that some local bodies entertained paid agents to assist in the work, and that much valuable voluntary help was forthcoming.

9. The increase in the recorded number of deaths from respiratory diseases is a disquieting feature of the year, but is no doubt very largely due to improved diagnosis. At the same time the heavy toll that is taken by tuberculosis of the lungs especially in towns cannot be disregarded, and His Honour trusts that the question will receive the fullest consideration from local bodies. Much indeed depends on the personal habits of residents in towns, but it is one of the foremost duties of the authorities responsible for the health of towns to see that the conditions so favourable to this disease, crowded houses, narrow and sunless lanes, and generally the want of air and light which are such conspicuous features of the larger towns in the province, shall not be perpetuated or reproduced in future extensions or alterations.

10. Eight lakhs were originally allotted to the Sanitary Board for distribution among local bodies, but it was subsequently found necessary, for financial reasons, to withdraw more than half this sum. Over 3½ lakhs were, however, distributed by the Board in aid of urban drainage and water-supply schemes and about Rs. 15,100 for rural sanitation.

One of the main obstacles in the way of utilising the allotments for rural sanitation has been the rule that a grant-in-aid of a sanitary scheme shall only be made when half the cost of the work is provided from local sources. The subject of rural sanitation has been engaging the close atten-

tion of Government, and the question of passing a special Act on the lines of the United Provinces Village Sanitation Act has been carefully examined. It has, however, been decided that for the present such an Act is not required, and that the Punjab District Boards Act provides all the administrative machinery necessary. In several districts the adoption of simple regulations under this Act to promote the sanitation of villages has been approved, and in a number of cases villages have agreed to the imposition of taxation in order to meet the cost of elementary measures of conservancy. In such cases when there is an evident desire on the part of the inhabitants for sanitary progress His Honour considers that the strict requirements of the rule may be waived and that grants in aid of sanitary works may be given, provided the principle of self-help is not disregarded, even when half the cost of such works cannot be raised by local contributions. With regard to urban sanitation there are no fresh developments to record, but drainage and water-supply schemes figure prominently in the activities of most municipalities. An experiment in the administration of quinine to school children, which was made in Amritsar in the autumn of 1914, met with considerable success. The results achieved are being brought to the notice of selected municipalities which are being recommended to adopt a similar scheme modified in the light of the experience gained at Amritsar. The acknowledgments of Government are due to the many individuals mentioned in paragraph 39 of the report who have constructed works of public utility; the public spirit shown by the Jats and Mahajans of the Ambala Division in this matter merits special mention.

11. The post of Sanitary Engineer to Government was held by Mr. A. S. Montgomery up to the end of September and by Mr. V. Stainton for the rest of the year. Mr. Stainton's report gives an interesting account of the various sanitary works in progress throughout the province and a summary of the many schemes which have been prepared but have not yet been put in hand. It is, however, distressing to learn that many completed sanitary schemes were found to be in a very neglected and deplorable condition through lack of proper maintenance and supervision. His Honour trusts that the instructions recently issued to local bodies regarding the regular inspection of machinery and plant by expert firms will be carefully followed.

Colonel C. J. Bamber held charge of the post of Sanitary Commissioner in addition to his own duties until the middle of July when he was succeeded by Colonel Hendley. His Honour's acknowledgments are due to both these officers for the readiness with which they undertook the additional responsibilities involved in this charge and to Colonel Hendley for an interesting report. The posts of Deputy Sanitary Commissioner and Additional Deputy Sanitary Commissioner were held throughout the year by Major W. C. H. Forster, I.M.S., and Dr. Khwaja Abdurrahman, respectively, and His Honour desires to express his appreciation of their services.

---

ORDER.—Ordered that a copy of the foregoing remarks be circulated with the report and be furnished, with the usual number of copies of the report, to the Government of India; also that the review be published in the *Punjab Government Gazette*.

Ordered, also, that a copy be furnished to the Sanitary Commissioner, Punjab, for information.

By order of His Honour the Lieutenant-Governor of the Punjab,

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

## GENERAL.

### REVIEW OF THE REPORT OF THE CONFERENCE ON THE CODIFICATION OF THE PUNJAB CUSTOMARY LAW.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home Department, No.* 49-*Judl.*-13, *dated Simla, the* 6*th July* 1916.

READ—

The report of the conference on the codification of the Punjab Customary Law.

RESOLUTION.—The Lieutenant-Governor's reasons for summoning the conference which assembled at Simla in September 1915 were stated in his speech at the opening session, but it will be convenient to summarize them very briefly here. Sir Michael O'Dwyer recognized that it had long been a reproach against our system of civil justice that it is expensive, slow and uncertain. It was obvious that the most effective remedy for this state of affairs was greater certainty. The question whether this certainty could be attained by the codification of customary law was one that had formed the subject of written discussion for many years past; but His Honour felt that matters had reached a stage at which further discussion on paper was not likely to help things forward, and that the time had come when practical proposals were likely to emanate only from oral discussion by a conference of those best qualified by knowledge, experience and ability to guide public opinion and to advise the Executive Government and the Legislature.

The 23 gentlemen who met at Simla represented the best judicial, legal and administrative talent of the Province, and those conclusions at which they arrived with complete or practically complete unanimity may, in His Honour's opinion, be safely accepted as the foundations of the edifice of reform which it is hoped will be the eventual result of their deliberations. The members of the conference have laid the millions who follow Punjab custom under a debt of obligation by their endeavours to solve or set at rest a problem which has exercised many minds during the past half century, and His Honour desires to thank the President, Sir Donald Johnstone, and the members of the conference for the thoroughness and care with which they examined the various questions referred to them, and for the practical assistance which the administration cannot fail to derive from their conclusions.

2. Before discussing those conclusions in detail, the Lieutenant-Governor wishes to dissipate a misconception which has arisen in certain quarters. From representations which have reached Government it appears that a section of the urban population of the Province, which as a rule is governed either by Hindu or Muhammadan law, is under the delusion that it is the intention of Government to substitute the rules of agricultural custom for the personal law founded on the *Dharm Shastras* or the *Shariyat* and *Hadis*. How this misapprehension arose it is difficult to understand. There is certainly not a word either in the terms of reference to the conference, or in the report of its proceedings, to give colour to such a notion. There has never been any intention on the part of Governmont or, as far as is known, any desire among the people of the Punjab to depart from the fundamental legal position as defined in section 5 of the Punjab Laws Act (IV of 1872), which is quoted below :—

"In questions regarding succession, special property of females, betrothal, marriage, divorce, dower, adoption, guardianship, minority, bastardy, family relations, wills, legacies, gifts, partitions or any religious usage or institution, the rule of decision shall be—

(*a*) any custom applicable to the parties concerned, which is not contrary to justice, equity or good conscience, and has not been by this or any other enactment altered or abolished, and has not been declared to be void by any competent authority ;

(*b*) the Muhammadan law, in cases where the parties are Muhammadans, and the Hindu law, in cases where the parties are Hindus, except in so far as such law has been altered or abolished by legislative enactment, or is opposed to the provisions of this Act, or has been modified by any such custom as is above referred to."

What the conference proposed was not to interfere in any way with the operation of Hindu or Muhammadan law, but to restore to the classes who are admittedly governed by custom the power which they formerly possessed, but which has now passed into the hands of the courts, of defining and developing their own customs. In restoring this power it will be the duty of Government to see that the wishes and sentiments of minorities receive adequate protection.

In order to avoid the recurrence of similar misconceptions, Sir Michael O'Dwyer thinks it desirable to give a definite undertaking that on any measure of reform that may be initiated public opinion will be invited, and its expressions will receive the most careful consideration. As will be seen from later passages in this resolution His Honour accepts the view of the conference that the main problem of ascertaining and codifying certain forms of custom will require detailed investigation by a small committee, whose labours will probably extend over a lengthy period. But there are certain subsidiary questions on which the conference was practically unanimous, and in regard to which His Honour is disposed to think that action might be taken by the Legislature at an early date. Any measure that may be framed will be designed solely with the object of reducing speculative litigation and

promoting the interests of the communities affected. It will be widely circulated to all who are qualified to represent those communities, including the executive officers of Government and such local bodies as district boards, agricultural associations, and rural co-operative credit societies, and no definite decision will be taken by the Legislature till the opinions received have been fully considered.

3. No lengthy discussion of the arguments for and against codification will be attempted in this resolution which is intended to be merely a statement in as simple and concise a form as possible of the conclusions at which the Lieutenant-Governor has arrived on a consideration of the proceedings of the conference. It is unlikely that all the intricate questions now at issue will be finally settled during his term of office, but in view of the peculiar qualifications of the conference and the great weight to which its conclusions are entitled, it will be convenient to have on record a summary of those findings accepted by His Honour as indicating the lines on which reform should be attempted.

4. The first question referred to the conference was " *whether codification of the Customary Law of the Punjab would prove effective in reducing litigation.*' No separate resolution on this point was passed, but the President's summary of the proceedings states that the general opinion was decidedly in the affirmative. In this view the Lieutenant-Governor readily concurs. Whatever objections there may be to codification on other grounds, it cannot, in his opinion be disputed that greater certainty as to the law must give greater security to title and discourage speculative litigation. Under the present system a man may allege any custom he likes, and however extravagant or immoral it may appear the Court is obliged to frame an issue on the point, and if he is a man of means and influence, he may be able to produce evidence calculated to make it difficult for the Court to come to a wise conclusion. A codifying enactment will prevent this abuse.

It appears to the Lieutenant-Governor self-evident that any measure that will have the effect of reducing litigation is *per se* desirable. Whether its disadvantages outweigh its advantages is of course the crux of the problem.

5. The second question referred to the conference was :—

" *Whether such codification is expedient, and, if so, what subjects it should include.*" On this vitally important matter the conference was unanimous. It passed without dissent the following resolutions :—

(*a*) " That this conference is in favour of codification using the term in its widest sense, *i.e.*, that custom or certain customs should be authoritatively recorded and the record given the force of law."

(*b*) " That of the subjects mentioned in section 5 of the Punjab Laws Act the following should not be touched by the proposed legislation : marriage, divorce (as such), dower, bastardy, family relations, and religious and commercial usages."

The Lieutenant-Governor would be inclined to add betrothal to the subjects excluded, and with that addition the effect of the latter resolution is practically to limit the scope of codification to customs concerning the enjoyment, devolution and alienation of property.

It would be unprofitable to discuss here the arguments for and against these propositions. They are stated at length in the report of the discussions of the conference, and in the minutes and correspondence attached thereto. His Honour accepts both findings as authoritative pronouncements of policy and considers that they mark an important stage in the development of the Province.

6. The third question in the terms of reference dealt with the methods of codification. It was: "*If codification is expedient, whether it should take the form of laying down rebuttable presumptions* (a) *by law* (b) *by rule.*"

This suggestion the conference unanimously rejected, preferring that the codified customs should be absolute. The system of rebuttable presumptions had at one time the support of such eminent authorities as Sir William Rattigan and Sir Frederic Robertson, and the main argument in its favour was that it would allow of progress and development in custom. But this essential object can be attained in other ways, and the Lieutenant-Governor agrees that the objections to the system, that it would leave things much as they now are and would fail to secure certainty or to reduce litigation, are insuperable.

7. The conference also rejected the suggestion underlying the fourth clause of the terms of reference, *viz.*:—

"*Whether it is desirable to give individuals by legislation the power of renouncing custom, in regard to alienations* inter vivos *or by will*—

(a) *by means of registered declarations,*

(b) *by means of contracts between themselves.*"

The idea of "contracting out by individuals," which was embodied in Chapter III of Sir Michael Fenton's draft Bill of 1911, met with very little support and the resolution rejecting it was passed without dissent. The Lieutenant-Governor concurs in this conclusion. The proposal is in direct conflict with the sentiments and traditions on which social relations in this country are based; and from the point of view of the administration the most convincing argument against it is that advanced by Mr. Justice Rattigan that it would not reduce litigation, as the parties to such contracts would constantly assert that their consent had been obtained by fraud or other unfair means. An equally strong argument is the legal point that no agreement between two persons would affect the rights of third parties.

8. The fifth point for discussion was stated in the following form:—

"*Whether it is desirable similarly to give communities the power to adopt by declaration specific customs, and, if so, in what manner such declaration should be made.*"

After an interesting discussion the conference eventually passed by 16 votes to 4 a resolution affirming the principle that "the declaration by a large majority of a community as to its wishes regarding the customs which it will follow in the future, irrespective of those followed in the past, should be accepted as having the force of law." It also passed with one dissentient a resolution "that provision should be made for revision as required."

The first of these resolutions contains a slight verbal inexactitude. Assuming that custom on certain points is to be codified, the declaration of the majority cannot of itself have the force of law, but obviously the meaning is that legislation should be undertaken with the object of giving effect to the wishes of large majorities in the different communities.

With the general sense of these two resolutions the Lieutenant-Governor is in agreement. The danger that codification may have the effect of confining custom within a cast-iron jacket of legislation and preventing its healthy development was forcibly described in the letter of 6th February 1907 from the Government of India which is printed as an appendix to the report. As His Honour remarked at the opening session of the conference, in the matter of custom the administrator must follow and not lead development, but it is our

duty to see that it has freedom to advance with the times. It follows that for any system of codification the quality of elasticity is essential, and that the machinery for future revision must be simple, rapid and easily set in motion.

His Honour is not blind to the danger that if we are to accept the declaration of the majority, the rights of the minority may be prejudiced. But in no civilized community is it possible for the individual to be a law to himself. Moreover, it must not be overlooked that although under the existing system an individual who asserts that he does not follow the custom acknowledged by the bulk of his community is entitled to have an issue framed on the point, yet the presumption is against him and most lawyers will probably agree that in suits dealing with custom presumption amounts to "nine points of the law." While uniform acceptance of the general custom by the community or unit is obviously desirable in itself, and would be usually forthcoming, it would still be open to a minority or section to prove the existence of a separate custom, such as the exceptions quoted in Rattigan's Digest, and if proved such custom would be recorded as the special custom governing that particular section. Briefly put the position contemplated is this:—when a minority can establish the existence of a separate custom it will be recognised, otherwise the general custom will prevail.

9. The real difficulty in this connection is to find an equitable definition of the terms "community" and "large majority" or, in other words, to determine the communal unit for purposes of codification. On this point the conference exhibited some diversity of opinion. Mr. Leslie Jones' proposal that the village should be the unit seems to have received considerable support during the discussion, and it has the advantage that the people are already familiar with the idea of a village statement of customs on certain points. Its disadvantages are, however, obvious, and eventually a resolution was passed by 14 votes to 8 in favour of taking the tribe within the tahsil as a unit. The latter system has this advantage that in all settlements carried out since 1871 codes of custom have been framed or revised for all the leading tribes in each tahsil after detailed enquiry from the tribal representatives. Those codes deal with practically all the subjects in regard to which codification is desired, and though no legal presumption of truth attaches to them they possess considerable evidential value and afford substantial assistance to the courts in deciding disputes as to custom.

His Honour, however, though he is disposed to agree with the conference, prefers not to express at present any final opinion on this difficult question. The point is one of method rather than of principle, and may well be left for the consideration of the small committee which will eventually have to formulate the details of any scheme of codification.

10. On the question of the form of the codifying enactment opinions were again a good deal divided. The suggestion that it itself should contain both the propositions of custom and the extent of their application met with no support. Such a system would obviously be defective in elasticity, as any change in custom would involve putting in motion the cumbrous machinery of the Legislature. A second resolution that the enactment should contain the propositions of custom and the Local Government be empowered to declare the extent of their application, was negatived by 11 votes to 8. Finally, it was resolved by 13 votes to 6 that the Act should be merely an empowering Act containing neither the statement of custom nor the extent of their application, but leaving it to Government to declare both by notification.

The Lieutenant-Governor accepts provisionally the view that it should be left to the Local Government to declare by notification the extent of the application of the statement of customs. Government already exercises a somewhat analogous power in regard to the notification of agricultural tribes under section

4 of the Punjab Alienation of Land Act. As regards the question whether the Act itself should contain the propositions of custom or whether these should be declared in Government notifications, His Honour, as at present advised, is inclined to think that the propositions should be contained in a schedule to the Act. It should be within the competence of the Local Government to amend the schedule by notification, after satisfying itself by enquiry, according to methods to be specified in the Act, that the change was really desired by a large majority of the community affected. This is in fact the scheme suggested in the interesting paper read by Mr. Gracey at the conference, and the fact that we have in Rattigan's Digest a model in outline for such a schedule seems to the Lieutenant-Governor to be no small recommendation in its favour. But the question is largely one of drafting and obviously cannot be settled off-hand. It must be left for the consideration of the committee that will have to be appointed to ascertain and tabulate existing customs.

11. This completes the summary of the propositions dealing with the more general aspect of codification which were considered by the conference, and it will be convenient at this stage to recapitulate the conclusions which the Lieutenant-Governor accepts and to indicate the lines on which he thinks that a definite advance can be made.

These are as follows :—

(*a*) That codification will prove effective in reducing the extent, duration and cost of litigation, thereby giving greater certainty of title, and is therefore desirable.

(*b*) That it is expedient to codify custom regarding alienations, succession, the special property of females, adoption, wills, legacies, gifts, partition and certain aspects of guardianship and minority.

(*c*) That codification should not take the form of laying down rebuttable presumptions, but that customs should be stated in an absolute form.

(*d*) That individuals should not be given the power to renounce custom.

(*e*) That in codifying custom, the declaration by a large majority of the community or unit as to its wishes regarding the specific customs it will follow in the future should, provided that such customs are not contrary to justice, equity or good conscience, be accepted as the basis of legislation.

(*f*) That the determination of the unit for purposes of codification and the definition of the term "large majority" are questions that must be left for future decision.

(*g*) That in the codifying enactment provision must be made for the revision of custom as required.

(*h*) That the extent to which custom as codified shall apply should not be stated in the enactment, but should be laid down by notifications of the Local Government. This conclusion is, however, subject to reconsideration after further investigation of the subject. The question whether propositions of custom should be stated in such notifications or should be contained in the enactment itself is one that must be left for future decision.

12. His Honour further agrees with the suggestion made in the final sentence of Sir Donald Johnstone's summary of the proceedings that before any definite action on these lines is taken a small committee should be appointed to work out details. Its first duty will be to ascertain by local enquiry and by the study of the existing codes of tribal custom and of the recorded decisions both of Civil Courts and Revenue Officers what existing custom is, and how far the people desire that it should be maintained or modified. It will then have to formulate in detail a scheme for codification and incidentally to determine to what units, tribal or territorial, it shall apply. If the enquiry reveals serious conflict of opinions or authorities, or a radical alteration in the views of the people concerned regarding some of the customs to be codified, *e.g.*, the succession of females in the absence of male descendants, it may be found advisable to omit for the time those controversial subjects and proceed with those on which there is more unanimity. It will probably be impossible to proceed with the enquiry over the whole Province simultaneously, but revenue divisions or groups of districts might be taken up separately. The task of the committee will be one of the greatest importance and its labours will necessarily be arduous and protracted. His Honour is of opinion that it should be composed of not less than three members, all of whom should possess special qualifications and abilities. One member should have settlement experience and one judicial experience, while there should be one non-official conversant with the views and usages of the rural population. The President should, His Honour is disposed to think, be a Judge of the Chief Court.

Unfortunately in the present period of stress it is impossible to spare officers and provide funds for this work. But the matter will not be lost sight of, and His Honour hopes that before the conclusion of his term of office the first steps may be taken towards initiating a measure of reform which he is convinced cannot fail to benefit the great mass of the population that accept customary law as the rule of decision in regard to the subjects stated in the preceding paragraph.

13. The two final questions referred to the conference dealt with certain subsidiary points which may be treated as distinct from the main problem of, codification. The sixth question was "*Whether it is desirable to lay down specific rules of law limiting the right to sue*," and certain examples of such rules were given. The conference accepted the general proposition without dissent. On a consideration of the examples cited in the terms of reference they recommended the enactment of the following rules :—

(*i*) That no one should be enabled to sue to set aside an alienation unless—

(*a*) he is descended from the same great-great grandfather as the alienor, and

(*b*) the alienation took place subsequent to his own birth.

In regard to this rule the conference was unanimous.

(*ii*) That the period of limitation for a declaratory suit in regard to an alienation whether by a male or female be reduced to six years.

This was carried apparently without dissent, after an amendment further reducing the period to three years had been lost.

(*iii*) That the limit for a suit for possession—where no declaratory decree has been obtained by contesting an alienation by a male be reduced from 12 to 6 years, time to run as laid down in the Punjab Limitation Act, 1900.

This was carried by 14 votes to 5 and a proposal similarly to reduce the period of limitation in the case of an alienation by a female was carried by 13 votes to 7.

(*iv*) That the principles underlying rules (*i*), (*ii*) and (*iii*) should apply *mutatis mutandis* to suits (*a*) for the possession of land where the setting aside of an adoption is a question involved, and (*b*) for a declaration that an adoption is invalid.

This was carried without dissent.

(*v*) That no male shall be entitled to contest an alienation by a male of non-ancestral property.

This too was carried without dissent, the words " no male " being obviously a mistake for " no one. "

The Lieutenant-Governor is greatly impressed by the arguments in favour of these five proposals stated in the President's summary. He has very little doubt that the present state of the law of limitation encourages belated and *mala fide* litigation, and he is disposed to agree in the view, apparently shared by many members of the conference, that the agnatic theory of succession, which is generally and rightly recognized as the rule of descent up to the fourth or fifth degree, has in the past been pushed to extremes by certain decisions of the Chief Court which have opened the door to speculative claims by very distant agnates. In regard to the alienation by a male of non-ancestral property, His Honour was under the impression that in the vast majority of cases this was already unassailable. But the general rule of law suggested would unquestionably accord with popular sentiment and might strengthen the hands of the courts in dealing with far-fetched, but not altogether impossible, claims.

A legislative measure giving effect to these suggestions would inevitably have the effect of rendering titles more certain, and would thus tend to reduce litigation. His Honour does not anticipate that it would give rise to excessive controversy, and sees no reason why its introduction should be postponed. He has accordingly given instructions for the preparation of a Bill on these lines. But he desires to repeat the undertaking already given that all shades of opinion will be consulted on the question and that full consideration will be given to the views expressed.

14. On a resolution suggesting legislation to prevent a female from contesting an alienation by a male the conference was evenly divided, and it was carried only by the casting vote of the President. His Honour is disposed to think that a universal rule to this effect would be in conflict with popular sentiment and should not be included in the proposed enactment. Among certain tribes or sections of tribes a daughter is recognized as a better heir than even near agnates, and any measure designed to curtail the rights of a female to sue would probably conflict with the present trend of popular sentiment.

15. The seventh and last question referred to the conference was "*whether it is desirable to substitute legislation for custom and Regulation XI of* 1825 *in regard to alluvion and diluvion.*" The conference unanimously accepted this suggestion and the Lieutenant-Governor concurs in their conclusion. As Sir Michael Fenton explained, disputes occasionally arise owing to the existence of customs, declaring for example that land washed up from a river becomes *shamilat* or that occupancy rights in it are extinguished by

the fact that it has been submerged. A statutory provision that land reclaimed from a river should be restored to its original position on the map and replaced in the hands of its original owners or possessors would accord with natural equity and would prevent disputes. A rule to this effect should find a place in the contemplated legislation.

16. The right of pre-emption was not one of the subjects discussed by the conference as the customary law on this point has already been codified. But Hon'ble Judges of the Chief Court have in a recent letter to Government restated the view expressed in their last two annual reports on the administration of civil justice, that the right of pre-emption should be wholly or partly abolished, and the Lieutenant-Governor considers that it will not be out of place to include in this resolution an indication of his views on this important branch of the customary law of the Province. He admits that the administration of the existing law of pre-emption has given rise to abuses, such as blackmailing and speculative litigation and the exaggeration of prices in sale deeds, which have been graphically described in the recent letter from the Chief Court At the same time after a careful study of the literature on the subject, including the opinions recorded by the Hon'ble Judges and other gentlemen on the Bill eventually passed as the Punjab Pre-emption Act of 1913 and the proceedings of the Legislative Council, His Honour is not at present prepared to agree that a sufficiently strong case has been made out for the abolition or even the radical alteration of a law, which however open to abuse, is based on a long established usage almost universal among the rural population, who regard it as one of the conditions inseparably associated with the tenure of agriculture land. The usage is also general among the population of at least the older towns, where it rests largely on the provisions of the Muhammadan law for maintaining the privacy of the family. His Honour attaches great weight to the considerations advanced by Mr. Justice Shah Din, who dissents from the view taken by his colleagues on this question, against any abolition of the right of pre-emption as likely to be regarded as an interference with the customs of the people. As has been stated in paragraph 2 of this resolution, what the conference of last September proposed was to restore to the classes who are admittedly governed by custom the power which they formerly possessed, but which has now passed into the hands of the courts, of defining and developing their own customs. If while restoring this power Government were simultaneously by an act of the Legislature to abolish or substantially restrict a custom almost universally recognized, it would be giving with one hand and taking away with the other. Another strong argument against the proposal of the Hon'ble Judges was forcibly expressed by the Hon'ble Mr. Muhammad Shafi in the Council meeting of 12th December 1912. He pointed out that the passing of the Alienation of Land Act, which aims at keeping agricultural land within the tribe or groups of tribes, had not removed the necessity for maintaining the right of pre-emption, which is designed to preserve the integrity of the village community or of sub-divisions of that community.

In His Honour's opinion, the only justification for the repeal or radical alteration of a law passed after full discussion in 1905, and substantially amended so recently as 1913, would be a strong and general desire for such action on the part of the people affected by the law, and of this there is at present no evidence. At the same time Sir Michael O'Dwyer recognizes that the views of the majority of the Chief Court Bench are entitled to the most careful consideration, and is prepared to admit that there may be a case for restricting the right to sue for pre-emption on the lines on which the conference proposed to limit the right to contest certain

other alienations. He would accordingly include in the reference to the committee, contemplated in paragraph 12 of this resolution, a direction to ascertain public opinion in regard to the maintenance or modification of the right of pre-emption. Such an instruction, while widening the scope of the committee's investigations, would not essentially alter their character, as the law of pre-emption though now defined in a statute is in fact based on antecedent custom.

---

ORDER.—Ordered that a copy of the foregoing resolution be submitted to the Secretary to the Government of India in the Home Department, and that copies be forwarded to the President and members of the conference.

Ordered further that the resolution be published in the *Punjab Gazette.*

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Offg. Revenue Secretary to Government, Punjab.*

## PART II.

## GENERAL.

### REVIEW OF THE ANNUAL REPORT ON THE LAWRENCE GARDENS, LAHORE, FOR THE YEAR 1915-16.

The following letter is published for general information :—

No. 800 S. (Rev. & Agri.—Agri.), dated Simla, 22nd July 1916.

From—The Hon'ble Mr. H. D. Craik, I.C.S., offg. Revenue Secretary to Government, Punjab,

To—The President, Lawrence Gardens Committee, Lahore.

I am directed to acknowledge receipt of your letter No. 1763, dated 9th June 1916, forwarding the annual report on the Lawrence Gardens, Lahore, for the year 1915-16, and to convey the following remarks of the Lieutenant-Governor.

2. His Honour gladly notes that the suggestions which he made in reviewing last year's report for the improvement of the mounds, the clearing-out of undesirable varieties of trees, the metalling and raising of some of the approach roads, and increasing the seating accommodation have received attention from the Committee. He trusts that the greenhouse which is such an eyesore in its present site will have been removed to a less prominent position before the cold weather. He is glad to see that the beautification of the mounds is receiving the attention of the Committee and would suggest that the paths which lead to the summit be more easily graded and metalled, and that something more be done to open up the views by cutting lanes through the dense vegetation that now shuts off the landscape at so many points. The classification of species of Eucalyptus suitable for planting in the plains is of particular interest, and the attention of local bodies and officers in charge of arboriculture will be directed to it. The arboricultural class which was started this year under the Superintendent of the Gardens was not so well patronised as it should have been. The Lieutenant-Governor trusts that greater advantage will be taken in future by district boards, etc., of the opportunity thus afforded of obtaining trained men to supervise their arboriculture.

3. The unusually dry seasons were not favourable to the gardens and the want of water was much felt. The improvement of the mounds was retarded by the inefficiency of the tube well, but it is hoped that better results will be obtained when the new tube well has been completed.

4. There appears to be a mistake in the statement of accounts in respect of the amount of the Government grant. This was to have been limited to the cost of the permanent establishment plus a grant of Rs. 2,400 for contingencies. Expenditure on pay and allowances of this establishment appears to have amounted to Rs. 8,187, so that the Government grant should have been shown as Rs. 10,587 only, resulting in a deficit of Rs. 2,379 on the year's working.

5. I am to convey His Honour's congratulations to the members of the Committee, particularly to Dr. Caleb, who has acted as Honorary Secretary for the last 6 or 7 years, and to Mr. Mustoe on the steady progress that is being made in the improvement of the gardens. At the same time I am to suggest that more frequent meetings of the Committee would make the progress even more marked and rapid.

H. D. CRAIK,

*Offg. Revenue Secretary to Government, Punjab.*

## REVIEW OF THE NOTES ON VACCINATION IN THE PUNJAB DURING THE YEAR 1915-16.

THE following letter is published for general information :—

No. 86—Sany-1, dated Lahore, 21st July 1916.
From—The Hon'ble Mr. O. F. LUMSDEN, I.C.S., Financial Secretary to Government, Punjab,
To—The Secretary to the Government of India, Department of Education.

I AM directed to forward, for the information of the Government of India, a copy of the Sanitary Commissioner's Notes on Vaccination in the Punjab during the year 1915-16. The death-rate from small-pox in 1915 was lower than in any year since the introduction of the system of registration of deaths; in these circumstances, the increase of over 20,000 in the number of re-vaccinations performed during the year under review reflects credit on the vaccination establishment. The number of primary vaccinations was also most satisfactory, for, though the actual number of such operations was less by 2,025 than in the previous year, the proportion of the children available vaccinated was greater and amounted to over 99 per cent.

2. The percentage of successful re-vaccinations was 2·6 better than in the previous year, but there was a slight falling off in the ratio of success obtained in primary operations, which is attributed to the effect on some of the lymph supplied of the excessive heat in certain districts. There was a very considerable increase—from 8,489 to 15,049—in the number of vaccinations of infants under one year of age performed by the special staff. The disproportion between the number of males and number of females re-vaccinated continues to be pronounced, males accounting for nearly 69 per cent. of the total number of operations. It has, however, to be borne in mind that 55 per cent. of the population are males, so that the disproportion is not so great as it would appear at first sight.

3. During the year under review the Vaccination Act was extended to four municipalities and has since been extended to five others. There are, however, still about 70 towns out of 100 in which the Act might be enforced, that have so far failed to adopt this simple measure for the protection of infants, and His Honour is disappointed to find that so poor a response has been made by municipalities to the appeal which was addressed to them last year. In the Hissar, Hoshiárpur and Montgomery Districts the Act is not in force at all, while in the Jullundur, Ludhiána, Lahore, Amritsar, Gurdáspur, Siálkot, Gujránwála and Dera Gházi Khan Districts it has been adopted in only one municipality each.

4. The total number of vaccinators employed in the Province was 274, and of these 63 attended the classes held during the year at the Vaccine Institute, Lahore, for instruction in the techniqué of vaccination and principles of elementary hygiene.

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

### REVIEW OF THE NOTES ON THE ANNUAL STATEMENTS OF THE DISPENSARIES AND CHARITABLE INSTITUTIONS OF THE PUNJAB FOR THE YEAR 1916.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab, in the Home (Medical and Sanitary) Department, No. 235 Medl.-1, dated 31st July 1916.*

READ—

Notes on the Annual Statements of the Dispensaries and Charitable Institutions of the Punjab for the year 1915.

REMARKS.—There was a net increase of six in the number of dispensaries in 1915, 17 having been opened and 11 closed, making a total of 473 institutions. Expenditure rose from Rs. 13,66,404 to Rs. 14,00,144, but receipts excluding the opening balance showed a reduction of nearly Rs. 10,000. The expenditure borne by local bodies amounted to Rs. 10,40,558 as against Rs. 9,80,498 in 1914, but Government contributions fell by Rs. 65,221, mainly under the head of building grants. There was a decrease of nearly Rs. 9,500 in the amount received in subscriptions, but this was due to a falling off in subscriptions from Europeans, the subscriptions from Indians, though less than those from Europeans, show a small increase which, having regard to the many other calls on private liberality, is a matter for satisfaction. The reduction in expenditure on buildings and repairs of about Rs. 24,000 did not counterbalance an increase in cost of establishment aggregating over

Rs. 45,000. No indication is given in the notes of the amount of fees for medical advice and medicines levied in hospitals and dispensaries which are maintained by local bodies. The Lieutenant-Governor trusts that this information, which was specially called for, will be furnished in future years.

2. There was a small increase in the numbers of in-patients treated, but the number of out-patients fell by 92,701. This is attributed by Colonel Hendley to the fact that the year was a very much healthier year than 1914, but this explanation cannot be accepted without qualification. Mortality from plague was higher than in any year since 1907, and nearly a quarter of a million deaths were due to this cause. There was also a severe epidemic of cholera accounting for 13,000 deaths, the largest number recorded since 1903. Owing to these causes the death-rate—36·3 per 1,000 - was 4·3 per 1,000 in excess of that of 1914 and 5 per cent. in excess of the quinquenial average. Malaria in an epidemic form was, however, almost entirely absent owing to the abnormally dry summer which was experienced, and it is to this fact that the decrease in the number of out-patients is due. The reduction in the number of patients treated for malaria at dispensaries of all classes amounted in fact to 210,549. On the other hand, there were large increases under the headings 10—Plague, 26—Diseases of the Eye, 30—Diseases of the Respiratory system, 36—All other Diseases of the Digestive system, 44—Diseases of the Connective Tissue, 45—Ulcers, and 46—Other Diseases of the Skin, amounting in the aggregate to 182,301 cases. The expansion in the figures under the last-named head is remarkable, and might well have formed the subject of some comment or explanation. His Honour observes that during the last two years the figures of such skin diseases have advanced by nearly 37 per cent., a rise of over 66,000 in 1914, being further augmented this year by an extra 88,000 patients. The only headings under which there was a considerable reduction besides malaria were 24—All Other General Diseases, 27—Diseases of the Ear, 30—Dyspepsia, 38—Goitre, and 48—Injuries, under which there was a decrease of 36,092 cases.

The Inspector-General has not, as desired in last year's review, noted the number of plague cases treated by officers of the plague staff or those in charge of itinerating dispensaries, although the general statistics of these latter are for the first time incorporated in statement B.

3. The inadequacy of existing arrangements for medical relief in certain districts was remarked upon in last year's review, and His Honour is pleased to note that the matter is about to be taken up by the Inspector-General. In this connection an examination of statement B, in conjunction with the death-rate returns contained in the Report on the Sanitary Administration of the Punjab for 1915, is not without interest. In the districts of Ráwalpindi, Siálkot and Attock, with death-rates considerably above the provincial average—57·42, 45·97 and 40·87, respectively—each dispensary has to serve over 80,000 persons ; and in Amritsar and Jhelum, also with the high death-rates of 52·29 and 48·83, respectively, there is on the average only one dispensary for over 72,000 persons. Hoshiárpur and Gurdáspur, with 17 and 16 institutions respectively, each serving over 52,000 persons, are the best provided districts in the Province, with the exception of Ludhiána, where there is a dispensary for every 47,000 of the population. Shahpur, with 13 dispensaries for 687,366 persons, is almost as well off as Gurdáspur, and the difference of 6,000 in the average number of patients per dispensary can be accounted for by the superior healthiness of this district as compared with Gurdáspur, the death-rates being 33·50 and 46·06, respectively. A similar explanation may be given of the much smaller average of patients per dispensary in the Ambála and Multán Divisions, where the death-rates in nearly every district are very considerably below the provincial average.

4. The growing confidence of the people in Western surgical methods is demonstrated by the large increase in the number of both selected and other operations performed during the year, and the Lieutenant-Governor has much pleasure in noting the large number of Civil Surgeons, Assistant Surgeons and

Missionary Surgeons who have earned special mention in paragraph 5 of the notes for exceptionally good work. Assistant Surgeon Mathra Das surpassed his own record of the previous year by nearly 1,000, performing 5,659 operations, of which 4,035 were in relief of cataract. Of Civil Surgeons, Lieutenant-Colonel H. Smith at Amritsar again headed the list with 2,183 selected operations.

5. The figures for women treated as in-door patients shew a slight actual gain. A new Zenana Hospital was opened at Hissar and a missionary dispensary for women at Montgomery, bringing the total number of female dispensaries up to 24. The Lieutenant-Governor concurs in Colonel Hendley's view that where the co-existence of municipal and missionary female hospitals involves a waste of power which might be more usefully employed in other spheres, such competition should, in the absence of special reasons, be discouraged. In particular, he would ask the Inspector-General to consult the municipal committee at Ludhiána as to the necessity of maintaining a separate female ward side by side with the Memorial Mission Hospital.

One of the chief obstacles to the spread of female medical aid is the dearth of workers. This is due to the absence in the past of facilities for the medical education of women and to the uncertainty of the prospects of women entering the medical profession. Facilities for education are now, however, provided by the Punjab Medical School for Women at Ludhiána. This institution is still in its infancy, but it is well organised and equipped and when the staff is further strengthened it should be in a position to do most valuable work in training the women of the Province for medical relief. The Lieutenant-Governor notes with satisfaction that several local bodies have already endowed stipends for the training of female Sub-Assistant Surgeons and compounders, and it is to be hoped that as the facilities offered become more widely known, a steady supply of qualified women will become available to take charge of female dispensaries. In regard to improving the status and prospects of women entering the medical profession, the Lieutenant-Governor will, as indicated in last year's review, be glad to receive proposals when the Inspector-General is in a position to formulate them.

6. Satisfactory progress has been made with the extension scheme of the Mayo Hospital, and the new Hospital and Medical College were formally declared open by His Excellency the Viceroy in December last. In addition to the 50 beds reserved at this hospital for sick and wounded soldiers of the Indian Army, 80 beds were provided at Jullundur and 50 beds at Karnál, while since the close of the year 50 additional beds have been reserved at Lahore and 100 at Amritsar. The Lieutenant-Governor takes this opportunity of acknowledging the patriotic spirit displayed by the district board of Jullundur and Karnál and the Municipal Committee of Amritsar in providing this accommodation and the thoughtful generosity shown by the local residents in supplying extra comforts for the sick and wounded soldiers.

7. No department has been more affected by the war than the Medical Department. Owing to the reversion to military duty of a large proportion of the officers of the Indian Medical Service, Civil Assistant Surgeons now hold 14 Civil Surgeoncies in excess of the number reserved for them, while 120 Civil Sub-Assistant Surgeons have been surrendered for service under the Army Department. The response made by Civil Sub-Assistant Surgeons to the appeal for volunteers for field service outside India has, however, been hitherto most disappointing and compares unfavourably with the manner in which compounders have come forward, although it is remarked that there are now some signs of a change for the better in the general attitude of this body of officers. The Lieutenant-Governor is glad to hear that the call for volunteers for active service from among the Assistant Surgeons is now meeting with an encouraging response, and that some 20 have so far applied for temporary commissions in the Indian Medical Service.

8. Owing to the reduction in the number of Indian Medical Service officers available for civil duties, Colonel Hendley has had to combine the offices of Inspector-General of Civil Hospitals, Sanitary Commissioner, Chief Plague Medical Officer and Chief Malaria Medical Officer. His Honour's acknowledgments are due to him for the successful manner in which he has discharged his extremely onerous duties and to the other officers of the department who have risen so admirably to the extra demands made upon them during the year.

---

ORDER.—Ordered that a copy of the foregoing review be forwarded to the Inspector-General of Civil Hospitals, Punjab, for information.

Ordered, also, that the review be published in the *Punjab Gazette* and be circulated with the notes, the usual number of copies of the notes and review being communicated to the Government of India, Home Department.

By order of His Honour the Lieutenant-Governor of the Punjab,

L. FRENCH,

*Offg. Additional Secretary to Government, Punjab.*

### REVIEW OF THE REPORT OF THE EXTERNAL LAND TRADE OF THE PUNJAB FOR THE TRIENNIUM 1913-14 TO 1915-16.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Commerce and Industry Department, No. 896-S., dated the 31st July 1916.*

READ—

The Report of the External Land Trade of the Punjab for the triennium 1913-14 to 1915-16 submitted by the Director of Land Records with his letter No. 127, dated 17th July 1916.

REMARKS.—An important change in the system of registration initiated during the triennial period under review has resulted in the inclusion in the statistics of a considerable volume of trade with Central Asia which had not been previously recorded, and this fact is the main explanation of the expansion of the total volume of trade from 11 lakhs in the previous triennium to 77 lakhs in that under review.

The figures relating to the trade with Afghanistan are, however, again somewhat unreliable owing to the large number of minor trade routes across the North-West Frontier which evade the trade posts and to the fact that none of the exports and imports by railway *viâ* Quetta are included.

On the whole the figures point to an expansion of trade during the first part of the period, subsequently checked by the outbreak of war and the consequent general dislocation of trade, but recently exhibiting distinct signs

830 PGG

of revival. In the case of Afghanistan, the weight of exports from India has decreased though their actual value has risen, a result in which the greatly enhanced price obtained for rice is the main factor. The average rate of this commodity during the period 1910—13 was under Rs. 5 whereas in the past triennium it has risen to Rs. 9-4-0 per maund. An interesting feature in the Afghan trade is the sudden and very marked expansion in piece-goods of Indian origin during the past year, and though the stoppage of European products, owing to the war is no doubt partly responsible, the possibilities of this market should not be ignored. Imports from Afghanistan have fallen, partly owing to the poor fruit season in 1914-15 and partly in consequence of restrictions placed on the export of certain commodities. There seems to be a steadily increasing demand for petroleum in Central Asia, but both there and in Chinese Tibet the trade in tea seems to be falling off, largely owing to the higher range of prices. Raw wool is the most important commodity imported from Chinese Tibet and the demand is now threatening to exceed the supply. Efforts are being made to encourage sheep-breeding and the future of this market depends largely on their success. The balance of trade with Tibet is, however, still largely against India, and the hopes which were expressed in the last triennial report that the position might in time be rectified by the extension of the tea trade show so far no signs of realisation. The export trade to Tibet continues to be disappointingly small, but the improvement of the Hindustan-Tibet Road from Chini to Shipki, which is about to be taken in hand, should help to stimulate it.

---

ORDER.—Ordered that copies of the report and review be submitted to the Government of India in the Foreign and Political Department and to the Director of Statistics, also that the review be published in the *Punjab Gazette*, and a copy be sent to the Director of Land Records, Punjab.

By order of His Honour the Lieutenant-Governor of the Punjab,

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

No. 16 LAHORE, FRIDAY, SEPTEMBER 1, 1916.

## PART II.

## GENERAL.

### REVIEW OF THE REPORT ON THE WEATHER OF THE PUNJAB FOR 1915-16.

No. 524 (Rev. & Agri.—Genl.), dated Lahore, 19th August 1916.

From—The Hon'ble Mr. H. D. CRAIK, I.C.S., Revenue Secretary to Government, Punjab,

To—The Director-General of Observatories, Simla.

I AM directed to acknowledge the receipt of the Report on the Weather of the Punjab for the year 1915-16, forwarded with your letter No. 3512 S., dated 4th July 1916, and to say that it will be published in the *Punjab Gazette*.

ORDER.—Ordered that the report, together with the above letter, be published in the Supplement to the *Punjab Gazette*. Also that copies be forwarded to the Director-General of Observatories, Simla, the Inspector-General of Civil Hospitals, Punjab, the Sanitary Commissioner, Punjab, the Senior Secretary to the Financial Commissioners, Punjab, and the Director of Agriculture and Industries, Punjab.

By order of His Honour the Lieutenant-Governor, Punjab,

H. D. CRAIK,

*Revenue Secretary to Government, Punjab.*

# ANNUAL METEOROLOGICAL REPORT, PUNJAB, 1915-16.

## THE HOT WEATHER SEASON.

DISTURBANCES of the cold weather type were much more frequent than usual in April, and maximum temperature was consequently below normal in the western districts. In May on the other hand temperature was considerably in excess and the duststorms and thunderstorms which ordinarily occur in this month were comparatively rare.

## THE MONSOON RAINS.

Hot weather conditions prevailed much later than usual in 1915, owing to the failure of the monsoon to penetrate into the Punjab until July. During July and August and the first eleven days of September the monsoon was weak and fitful, and rainfall for the whole monsoon period up to the 12th September was very much below the average. On the 12th September a change set in and monsoon conditions prevailed during the remainder of the month except in the south-western districts. The final retreat of the monsoon from the Punjab usually takes place about the middle of September, but in 1915 the monsoon did not withdraw till the 4th October.

The rainfall of the whole monsoon period was below the average in every district without exception: it was nearest to normal in amount in the Simla, Kangra and Jhelum Districts, where the deficiency was less than 20 per cent. In the eastern and northern districts in the plains the deficiency was not so strongly marked as in the south-west of the province, where in many districts the rain received was less than 25 per cent. of the average fall.

The statement below shows the local features of the rainfall distribution during the period :—

## THE COLD WEATHER SEASON.

The failure of the monsoon rains was followed by an even greater failure of the winter rains. There were only four depressions during the whole of the cold weather that gave rain of any importance, and the rainfall for the period was everywhere more than 30 per cent. in defect. The deficiency amounted to between 80 and 88 per cent. in Hissar, Karnal, Lahore, Multan and Dera Ghazi Khan.

The following table gives the percentage for all the districts of the Punjab and shows the unusual character of the winter rains :—

*Cold Weather Rainfall.*

*April.*—Owing to the unusually large number of winter depressions, rainfall was considerably above the average in the north-western districts.

*May.*—Weather was even drier than usual, and hot weather conditions were very strongly marked, both maximum and minimum temperatures being largely above normal.

*June.*—There were no incursions of damp sea winds, and rainfall occurred only in connection with thunderstorms and duststorms. During the greater part of the month temperature was higher than usual.

*July.*—Rainfall was scanty and occurred only as local showers; the deficiency in the month's rainfall was large in all districts. Temperature was consequently higher than usual.

*August.*—The monsoon continued weak and unsteady, and rainfall was only light and local, and was everywhere in defect except in the Simla and Kangra Districts. Temperature was again much above normal.

*September.*—Weather was dry for the first eleven days, but after that monsoon conditions were established, and for the next five days gave rise to widespread rainfall in the eastern and northern districts. The rainfall of the month was much heavier than usual in the Karnal and Ambala Districts. Minimum temperature was higher than usual.

*October.*—Numerous light falls of rain occurred during the first three days, but the rest of the month was dry.

*November.*—Weather was unusually settled and dry.

*December.*—The only precipitation of importance in December was that given on the 15th by a winter depression, and the rainfall of the month was in defect in every district.

*January.*—Several depressions entered north-west India during January, but the only one of importance was the last which gave local rain in the Punjab. Rainfall was thus considerably less than usual. Maximum temperature was above normal.

*February.*—A disturbance which appeared in the second week of the month gave fairly widespread rain; there were no other disturbances of any importance, and the rainfall for the whole month was in defect generally.

*March.*—Weather was practically dry except between the 17th and 19th when widespread rainfall occurred in connection with a disturbance of the cold weather type. Maximum and minimum temperatures were both considerably higher than usual.

### SNOWFALL.

In the mountain region of the North-West Frontier Province the snowfall was apparently light from November to January, and also in March, and unusually heavy in February.

The precipitation of the season was distinctly below normal in Kashmir, the defect occurring chiefly in January and March.

In the Punjab Himalayas the snowfall was heavier than usual in February, and deficient during the rest of the period from November to March. On the Dalhousie Range snow is reported to have fallen as low as 2,300 feet on the 6th of February.

### REVIEW OF THE ANNUAL REPORT ON THE PUNJAB VETERINARY COLLEGE, CIVIL VETERINARY DEPARTMENT, PUNJAB, AND THE GOVERNMENT CATTLE FARM, HISSAR, EOR THE YEAR 1915-16.

No. 1320 S. (Rev. & Agri.—Genl.), dated Simla, 31st August 1916.

From—The Hon'ble Mr. H. D. CRAIK, I.C.S., Revenue Secretary to Government, Punjab,

To—The Secretary to the Government of India, Department of Revenue and Agriculture.

I AM directed to submit, for the information of the Government of India, a copy of the Annual Report on the Punjab Veterinary College, Civil Veterinary Department, Punjab, and the Government Cattle Farm, Hissar, for the year 1915-16.

2. The staff of the Veterinary College is still below strength, and the retirement of Mr. Gaiger in consequence of injuries received in the course of his duties is much to be deplored; but the results of the examinations were eminently satisfactory, and Colonel Pease and his assistants are to be congratulated on the success obtained. Of the 70 new students more than half—an unusually high proportion—belonged to the Punjab, and 31 of these were private students. If this progress is maintained, it should within a few years make good the deficiency in the establishment of the Civil Veterinary Department, which during the year owing to the war and other causes was 54 or 25 per cent. under strength. It is satisfactory to find that the graduates of the college can count on ready employment, and the fact that of the 160 graduates who have passed out within the last 3 years, 140 are employed by Government or local bodies and 20 by Native States, none being available for private practice, shews the keenness of the demand.

An interesting development of the year was the institution of a post-graduate course. The class for this course is limited to 20, of whom three in each year are to be selected from among the Veterinary Inspectors and Assistants of the Punjab, the remaining 17 places being open to candidates from Native States and other Provinces. The course has been made compulsory for Veterinary Assistants before promotion to the rank of Inspector. The year was also notable for the opening of the new College buildings by His Excellency Lord Hardinge in December last. The increased facilities for training afforded by the new buildings have led already to great improvement in the training of the students, while the greatly enlarged accommodation provided in the hospital is reflected in the number of in-patients treated, which rose from 756 in 191 -15 to 1,355 in the year under report. On the other hand, there was a decrease in the number of out-patients, and this is attributed to the distance of the new hospital from the city, and the Lieutenant-Governor hopes that the scheme for a municipal dispensary to serve the more distant parts of the city will materialise.

3. Though the subordinate establishment of the Civil Veterinary Department was 25 per cent. below its sanctioned strength, the record of work accomplished was highly satisfactory and reflects the greatest credit on Colonel Farmer and the other officers of the Department. The Lieutenant-Governor cordially endorses the commendation which the Director of Agriculture has bestowed on the work of the Chief Superintendent, who, in spite of the increased pressure of his ordinary work, found time to assist the Army Remount Department in various ways. Nearly 13,000 villages were visited and over 128,000 animals were treated by the touring members of the staff. In particular, the number of castrations performed was nearly double that of the previous year, and the progress in this respect is a most encouraging proof of the extent to which popular prejudice is being overcome and the value of the Department's work is being recognised. Further evidence of this fact is to be found in the number of inoculations and vaccinations against rinderpest, hæmorrhagic septicæmia and blackquarter performed in a year which in comparison with the previous year was singularly free from these diseases. The year was in fact very healthy on the whole, and the only disquieting feature was the reappearance after an interval of several years of dourine in the Dera Gházi Khan District.

Over 300,000 animals were treated as in- or out- patients in veterinary hospitals and dispensaries: a total more than double that of any other Province in India. In this, and indeed in nearly every, branch of veterinary work the Punjab may fairly claim to be the most advanced Province of the Empire. In past years the Lieutenant-Governor has recorded his opinion that this satisfactory result is due to the close touch which the Department maintains with the people. One indication of this is the fact that in the college the instruction is given in the students' own vernacular and is therefore more practical and more readily assimilated Another is the admirable system of informal lectures to villagers on veterinary work which Colonel Farmer has developed. The Lieutenant-Governor thinks that it would help towards the same end if the Veterinary Department were brought into touch with the Agricultural Associations which have now been established in many districts and if Veterinary Officers attended their periodical meetings. He believes that the Punjab zamindar is only too willing to listen to and act upon expert advice once he is convinced that the expert is speaking from practical knowledge of local conditions and not merely by the book.

4. Owing to the failure of the monsoon the year was financially a disastrous one for the Hissar Farm. Fodder had to be imported in large quantities and the stock suffered considerably, the number of casualties being greater than in the previous year in spite of the fact that the farm was unusually free from contagious disease. Expenditure rose from Rs. 1,54,070 to Rs. 1,85,416, while receipts declined by over Rs. 8,000 to Rs. 1,01,024. The number of animals of

all sorts sold was only 613 as compared with 845 in 1914-15, though 181 bulls were issued to district boards, a number which again beat all previous records. The year was in fact most trying to the staff, and great credit is due to Mr. Branford, the Superintendent, and his Bailiff and other assistants for the manner in which they met their difficulties. The great fluctuations in the results of the farm's working turns almost entirely on the fodder supply, and the fact that 60,000 maunds of fodder had to be purchased from outside—at a cost of perhaps Rs. 70,000—against 114,000 maunds raised on the farm (which has an area of 41,548 acres) points to the need of more effective local arrangements. The Lieutenant-Governor doubts whether enough is being done to store the surplus of a good year in the form of hay and ensilage to meet the deficit of the frequently recurring dry years. The present year promises to yield an unusually abundant supply of fodder and the Lieutenant-Governor considers that full advantage should be taken of this and arrangements made for storage on a really large scale.

5. No new veterinary dispensaries were opened by local bodies during the year, but the rebuilding of three old hospitals according to the standard plan was completed and various additions were made to existing dispensaries. The Lieutenant-Governor has noticed with pleasure that several public-spirited gentlemen have provided buildings at their own expense, and he trusts that others will follow their example. The interest of district boards in breeding operations was well sustained, and in addition to the 181 bulls obtained from Hissar 16 Dhanni and 3 Dajal bulls were bought through the Department and 27 cross-bred merino rams were purchased from Hissar: 38 rams were obtained from the same source by private individuals.

Copy forwarded to the Director of Agriculture and Industries, Punjab, for information and guidance.

## REVIEW OF THE ANNUAL REPORT ON THE EXCISE ADMINISTRATION OF THE PUNJAB FOR THE YEAR 1915-16.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Department of Commerce and Industry, No. 1306-S. (C. & I.), dated 30th August 1916.*

Read—

Letter No. 588-S., dated the 19th July 1916, from the Senior Secretary to the Financial Commissioners, Punjab, forwarding the annual report on the Excise Administration of the Punjab for the year 1915-16.

Remarks.—The year 1915-16 was marked by a further decrease in the consumption both of country spirit and of opium which was noticed in last year's report. This is mainly a consequence of the increase in prices arising from the enhanced taxation of those intoxicants, but was also due in part to the continuance of the war and the prevalence of high prices generally coupled with the partial failure of the autumn crops and the poor spring harvest prospects. The year was also signalized by a general enhancement of excise taxation. The still-head duty on country spirit and the issue price of excise opium were raised at the commencement of the year, and the import duty on foreign spirit (including the Punjab products so classed) towards its close. The combined result of increased taxation and decreased consumption was a slight increase of about one per cent. in the total excise revenue. A spirit of caution, due partly to the war and partly to the enhanced taxation itself, was abroad in the Trade. There was a large fall in the receipts from country spirit

vend fees and the malt liquor duty. The position was to some extent retrieved by the opium sale receipts, but the total revenue increased by only Rs. 87,787 to Rs. 70,08,878.

The Lieutenant-Governor would here observe that though the excise revenue is increasing, and has in fact, mainly owing to enhanced taxation practically doubled in the last ten years, the number of retail opium and country spirit shops has been reduced in the same period by 30 per cent., the consumption of opium has slightly diminished while that of country spirit has decreased by no less than 24 per cent.

2. In view of the conditions above described it is not surprising to find that the liquor industry did not experience a prosperous year. Spirit issues from the five Punjab distilleries dropped by 58,245 to 425,982 proof gallons, and though the quantity of beer manufactured showed a slight recovery—from 1,116,890 to 1,134,318 gallons—the increase was all in the last quarter of the year, and was the result of an attempt, which largely failed, on the part of the manufacturers to escape the increased duty. Thus owing to the decline in issues, the increase in the still-head duty on country spirit from Rs. 5 to Rs. 6-4-0 per proof gallon from the 1st April 1915, only raised the receipts from spirit duties by Rs. 2,12,746 to Rs. 25,72,580. On the other hand, the receipts from the malt liquor duty declined by Rs. 1,30,084, or 45 per cent., to Rs. 1,53,047, and with the decrease in vend fees of over three lakhs or 16 per cent. to Rs. 15,79,629, there was a net decline of over two lakhs in the income from liquor which stood at Rs. 45,28,586, or the lowest figure since 1910-11. In this connection His Honour would repeat and emphasize the following passage from his speech at the Budget discussion in Council last April: "I have made no secret of my view which is also that of Government that we shall continue to regard with satisfaction the decline of the excise revenue provided that it is due to a real decrease in the consumption of liquor, licit and illicit, and is not attended by resort to intoxicating drugs, cocaine, hemp, etc., which are more noxious and deadly in their effects than spirituous liquors."

3. The large decrease in the consumption of country liquor by 13 per cent. to 331,603 gallons is no doubt largely due to the rise in the retail price, the departure of troops and general high prices. But at the same time the Lieutenant-Governor considers that full credit should be given to the efforts of the administration to assist the cause of temperance reform. The number of country spirit retail licenses was reduced from 748 to 720, and now stands at one for every 27,150 of the population, against one for every 15,525 persons ten years ago. Licenses at fairs were greatly restricted, and in Amritsar all liquor shops were removed during the year from the interior of the city to municipal premises in the outskirts. Local and municipal bodies, from some of which valuable suggestions were received, have been constituted the regular advisors of the Collector on questions of excise policy, and though the proposals of the Temperance deputation to His Excellency the Viceroy regarding counter-attractions to drink were found unsuited to the conditions of the Province, private temperance societies are extending and temperance teaching is being vigorously promoted in many of the schools and colleges. His Honour considers that this is a record of which no administration need be ashamed and at least one concrete result of the good work done is to be found in the further decrease in the number of convictions for drunkenness by 170 to 961. In Tarn Táran which formerly had an unenviable reputation in this respect there was not a single conviction during the year—a result due doubtless to the closing of the liquor shops at the great Sikh fairs.

4. The Lieutenant-Governor is, however, disposed to agree with the Financial Commissioner that though there has been a real diminution in drinking, the decrease of licit may also to some extent represent an increase of illicit consumption. Every effort is being made to cope with this nefarious

traffic. Though the special campaign against illicit distillation may not in its extended form have secured the number of detected cases expected, the Lieutenant-Governor considers that the detection of 223 cases during the year is ample justification of the special measures adopted. It must not be forgotten that emulation in this respect is a two-edged weapon, and His Honour considers that the campaign can equally well be justified by the information it has accumulated and the deterrent effect it has exerted in the ten worst districts of the Province. The question of its continuance is under the consideration of Government.

The Lieutenant-Governor, however, is convinced that much more can be done with the ordinary resources of Government and he would commend to the consideration of all Magistrates and Collectors the remarks of the Hon'ble Chief Judge, quoted in paragraph 31 of the report, regarding the award of substantial terms of imprisonment for certain classes of excise offences and the views of the Financial Commissioner in the same paragraph on the necessity for more strictly enforcing the responsibility of lambardars to report cases of illicit distillation in their villages. It is obvious that in the great majority of cases village officers cannot be unaware of the existence of stills in their village and their failure to give timely information to the authorities is a serious breach of duty deserving of condign punishment. It is equally obvious that the number of persons convicted of excise offences — 728 — though it shows a slight increase on the figures of previous years represents but a small proportion of those who have broken the excise laws.

5. Smuggling of country spirit from Native States, which, as pointed out in paragraph 32 of the report, has hitherto been another very serious source of illicit consumption, will, His Honour hopes, be greatly lessened by the recent action of the principal Darbars concerned in raising their still-head duty to Rs. 5 with a promise of further co-operation.

6. While accepting the Financial Commissioner's view that the main difficulty in dealing with illicit distillation in districts where it is rife is the prevalence of cane cultivation, the Lieutenant-Governor is not prepared to agree that such cultivation is economically unsuitable to most of the Province, and he thinks that any restriction or regulation is outside the plane of practical politics. Cane covers an area of nearly 400,000 acres in the Province and is regarded as the zamindar's most valuable crop. Two-thirds of the area is grown in the ten districts where illicit distillation is most common, and any interference on excise grounds with its cultivation, the natural tendency of which is to expand, would be obviously unwarrantable and undesirable. The case is clearly differentiated from that of opium and of bhang as these are grown primarily and purely as intoxicants. For checking illicit distillation we must therefore continue to rely on the other measures referred to by the Financial Commissioner and the Lieutenant-Governor thinks we have no reason to be dissatisfied with the success obtained in recent years.

7. The increase from Rs. 20 to Rs. 25 in the issue price of excise opium from the 1st April 1915 resulted in a large increase in the receipts from sales which rose by Rs. 2,41,727 or 38 per cent. to Rs. 8,75,292. But the small decrease of only 3·9 per cent. in consumption despite an increase of about 19 per cent. in the retail price, shows, as the Financial Commissioner points out, that the opium habit is less affected than the drink habit by considerations of price.

The Lieutenant-Governor is glad to see that the restriction of the import of hill opium into Nabha and its total prohibition in the case of Jind and Maler Kotla have resulted in a decline in the amount supplied to Native States by 51 per cent. to 8,899 seers. A proposal is now under consideration to close down all supplies of this kind of opium to British districts and Native States alike. Should it be found possible to carry this measure through cultivation

of the drug in this Province will entirely cease, while the arrangement will also deal a severe blow at the large illicit traffic in opium between certain Punjab Native States and Calcutta which despite one or two setbacks is still believed to flourish.

8. There has been some increase in the consumption of charas and bhang, but the former increase is so small as to be practically negligible, while the latter is to some extent explained by the unusual heat of the summer of 1915 and the consequently abnormal demand for this cooling drink. The duty on charas has been raised since the year under report to Rs. 14 per seer with effect from the 1st April 1916 and that on bhang to Re. 1-8-0 per quarter maund or less.

9. His Honour is glad to see that the traffic in cocaine has ceased to expand, probably as a result of the war and diminished supplies, and that the preventive establishment of the Province continues to co-operate with those of the United Provinces and the Delhi Province. He agrees with the Financial Commissioner that special investigation should be made into sales of cocaine at Lahore which exceed those of all the remainder of the Province.

10. The Lieutenant-Governor desires to thank Sir Michael Fenton and Mr. Maynard for their able and efficient administration of the excise of the Province during the year 1915-16, and the latter for an interesting report. His Honour's acknowledgments are also due to the officers and non-officials mentioned for good work in paragraph 38 and Appendix A of the report.

---

ORDER.—Ordered that the foregoing remarks be published in the *Punjab Gazette* and communicated to the Financial Commissioners and the Inspector-General of Police, Punjab, also that they be forwarded, with copies of the report, to the Government of India, Department of Commerce and Industry.

By order of His Honour the Lieutenant-Governor of the Punjab,

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

### REVIEW OF THE REPORT ON THE ADMINISTRATION OF THE POLICE IN THE PUNJAB FOR THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home (Police) Department, No. 291—Police-2, dated 15th September 1916.*

READ—

The Report on the Administration of the Police in the Punjab for the year 1915.

REMARKS.—The reviews of the last two Reports on the Administration of the Police have recorded a progressive, if not marked, diminution of serious crime. In the year covered by the present report (which was received from the Inspector-General over a month late) the aggregate of true cognizable cases of all kinds dealt with by the police shows, indeed, a further reduction, but if offences under Local and Special Laws be set aside, there has unfortunately been a rise of cases from 34,061 to 35,597 or over 4 per cent., while the numbers of persons arrested by the police exceeded the figures for 1914 by 3,756, the total of 46,671 representing the high-water mark reached since 1912. There is no difficulty in seeking the reasons for this set-back. The political and economic unrest prevalent in a period of external war, high prices, acute scarcity in the latter half of the year, and severe plague acted as a stimulus to the disorderly elements of the community and the resultant lawlessness expressed itself in its most violent forms in the *Ghadr* conspiracy and the dacoities which occurred in the spring in the south-west of the Province.

But for the weapons forged under the special legislation of the Ingress into India Ordinance and Defence of India Act violent crime would have been even more rampant. Thanks, however, to those measures, large numbers of potential criminals of desperate character were effectually disarmed by temporary restraints on their liberty of movement and action and the *Ghadr* and other lawless movements were promptly quelled. As the Inspector-General indicates, the success of the administration in dealing with these abnormal and unexpected problems serves to dispel anxiety as to the future: there is no reason at present to apprehend any serious recrudescence either of political crime or of widespread lawlessness.

2. The increase of ordinary crime in the Eastern and Western Ranges was insignificant : the main source of offence was in the Central Range, where political unrest was most marked. But a detailed examination of figures discloses several re-assuring features. Murders have again decreased by almost 5 per cent. to 512 cases : attempts to murder and culpable homicides by about 10 per cent. to 284 cases : while the steady decline in cases of rioting has been maintained. The only class of serious offences against the person in which a rise has occurred is grievous hurt and there the advance is nominal. It is in serious offences against property generally that a significant advance is recorded. While dacoities stand at 264 as against 109 last year, burglaries surpass the previous twelve months' statistics by no less than 1,702. On the other hand, there was an unexpectedly small increase in ordinary thefts concurrently with a decline in cases of cattle-lifting—a not unnatural consequence in a year when fodder prices ruled high and grazing was scarce. The number of persons actually tried by the courts for offences under classes I to V rose by 2,630 ; but the whole of this excess is to be ascribed to the arraignment of persons arrested in connection with the wave of lawlessness which spread temporarily over the three south-western districts.

As a result of the circumstances described above, the value of the property stolen is returned at nearly 36½ lakhs of rupees or no less than 78 per cent in excess of the preceding year's figures. The percentage of total recovery amounted to only 20, which is a very much lower figure than has been attained in any year of the past quinquennium. The results achieved in burglary and theft cases show an improvement ; the failure was in dacoity cases in which the peculiar circumstances of the majority of the crimes account for the want of success.

3. The predominant features of the criminal administration in 1915 may be summarized as the outrages of the *Ghadr* revolutionaries, the dacoities in the Jhang, Muzaffargarh and Multan Districts, and the less obtrusive, but numerically important, activities of immigrant and resident members of criminal tribes.

The opening of the year found the police absorbed in unravelling the threads of the anarchist movement to which brief reference was made in last year's review and which culminated in the now historic trials known as the Lahore Conspiracy and Supplementary Conspiracy cases with their numerous ramifications. How serious the situation was with which the department was called on to grapple is proved by the programme framed by the revolutionaries in pursuance of their design to stir up insurrection in and beyond the Province. Their plans embraced the commission of dacoities and looting of Government treasuries with the object of amassing funds, the manufacture of bombs, the collection of arms, and the seduction of troops and students—all measures subsidiary to the waging of war against Government. The head-quarters of the conspiracy was established in the Manjha, Malwa and Doaba tracts, but recruits were drawn to the ranks of the terrorists from districts as far afield as Ráwalpindi and Jhelum and from other Provinces. At the end of January and the beginning of February the police were confronted with a wild orgy of dacoities and murders prepetrated on inoffensive villagers in the Ludhiána and Amritsar Districts and the Máler Kotla State as a prelude to the capital design of the conspirators, which was to raise mutinies among the troops of the garrisons at Lahore, Ferozepore and other cantonments. By the skill of the police, working in close co-operation with the military authorities and supported by the great mass of the civil population, the plans of the anarchists were completely frustrated and the conspiracy rapidly collapsed, although a series of sporadic outrages followed, such as the abortive attempt on the Doraha railway bridge ; the raids planned on the Kapurthala State treasury and Central Jail, Lahore ; the murder in Hoshiárpur and Amritsar of two rural notables who had lent active support to the administration ; the Walla Bridge murders ; and, lastly, the assassination at Padri of a witness in the conspiracy case, which closed the main chapter of the revolutionary movement. It may here be noted that nearly all of the principal organisers and most active agents of the movement have been brought to justice and only a few desperate men are still at large.

4. The dacoities and disorder that occurred in the Jhang, Muzaffargarh and Multan Districts in February and March were unprecedented in the annals of the criminal administration of the Province. The causes of this sudden outburst of lawlessness are varied and to sôme extent obscure: but while in some places the disturbances are attributable to economic causes such as strained relations between Muhammadan debtors and Hindu creditors, to local distress caused by high prices, and the refusal of credit by grain-dealers or money-lenders, elsewhere there were unmistakeable signs that the disorder was the result of a fairly widespread belief that British rule was shaken and the time was ripe for the Muhammadan peasantry to release themselves from all obligations to their Hindu creditors and to start afresh with a clean sheet and with such loot as they could secure by the spoliation of their well-to-do neighbours. This theory explains the fanatical features of some of the dacoities, the persistent burning of account books and the wanton destruction of property that could not be carried away. It also explains the pose of some of the raiders as Germans, a pose designed rather to create panic among their victims than indicative of any particular hostility to Government whose property generally was left severely alone. The local authorities at first failed to realize the significance of this unexpected outbreak, and were also handicapped by the absence of the police reserves in other parts of the Province; but directly these reserves and a squadron of cavalry were drafted into the disturbed area and energetic action (in the course of which several dacoits were shot down by the police) was taken, the disturbance subsided; but not before 128 crimes of violence had been committed.

In dealing with outrages in which whole villages participated and which usually took place at night, it was impossible to hope for complete success in tracking down the offenders. The fault in a great number of cases lay neither with the complainants who were confronted with the difficulty of identifying their assailants among large crowds of men nor with the police who, after checking the spread of the disturbance by the arrest of nearly everyone whose name was mentioned by the complainants, were so over-burdened with the sudden onrush of crime that investigation work had perforce to be hurriedly done or in many cases deferred until it was too late to obtain satisfactory proof against the offenders. However, some 700 of those implicated have been convicted either by the Special Tribunals or the regular courts and sentenced to terms of imprisonment averaging 5 to 7 years.

As a precaution against any recrudescence of disorder, a force of over 150 punitive police was quartered on the disturbed areas for an initial period of one year, and other measures such as deportations of ringleaders and establishment of conciliation committees were undertaken, with the result that normal conditions were re-established with surprising rapidity.

5. The first six months of the year were over-shadowed by the abnormally high level of prices and an exceptionally severe visitation of plague, and to these succeeded a failure of the monsoon. A rise in offences against property was the natural result; but even those causes do not sufficiently account for the great outburst of crime recorded during the winter months in the Central Range: and the Lieutenant-Governor concurs with the Inspector-General's view that the increase of offences, more particularly burglaries, must be attributed chiefly to the immigration of criminal tribesmen from down-country into the central districts, and also to the activities of the local criminal tribes and other criminal gangs on whom this influx naturally re-acted. Many of those gangs have since been brought to justice: a comprehensive scheme for the settlement of those who are at large is now being elaborated by an officer specially deputed for the purpose: but other remedial measures for combating the operations of immigrant criminals will have to be devised.

Incidentally, it may be noted that the vocation of burglar is far less exposed to risk than that of ordinary thief. Whereas over 88 per cent. of burglaries remained undetected, in 40 per cent. of theft cases the police achieved success. One house-breaker in every six cases is prosecuted to conviction: in only every other case can the thief hope to escape punishment.

6. Judged by the criterion of convictions obtained before the courts, the police working exhibits on the whole a steady improvement. The one

exception is under murders where there is a marked deterioration as compared with the results of the two previous years, the percentage of cases convicted to true cases reported having declined from 45 to 39. Against this is to be set the percentage of success in dacoities which rose substantially from 37 to 60. The Lieutenant-Governor regrets to observe that in the districts of Siálkot, Hoshiárpur and Amritsar the unsatisfactory results which were commented on last year not only exhibit no improvement this year, but in two instances are characterized by further retrogression. To the above districts must now be added Gujránwála which is also distinguished in the Criminal Justice Report for the protracted duration of its trials. His Honour notes that the Deputy Inspectors-General of the Ranges concerned have been instructed to enquire into and report on this subject. He trusts that in the coming cold weather the Inspecting Judge of the Chief Court will also find it possible to examine the question generally on its bearing in the progressive deterioration of results in the Central Range.

The figures of processes served by the police in non-cognizable cases have almost regained the level reached in 1913. The instructions issued to Magistrates by the Chief Court towards the end of the year with a view to securing some relief to the police from this burden should bear fruit in the current twelve months.

7. The Lieutenant-Governor has lost no occasion of emphasising the necessity of close co-operation between the police and the public for real success in the suppression of crime and disorder : and in the year under review the importance of keeping this principle steadily in view has been fully illustrated by incidents which have been signalised both by the presence and the absence of such association of effort. An impressive example of the former is to be found in the Chabba dacoity in which the campaign of terrorism pursued by the *Ghadr* revolutionaries reached its apogee. The Special Commission which tried the Lahore Conspiracy case, in commenting on the behaviour of a body of the villagers, remarked " that the courage and bravery displayed by these men form one of the few bright episodes in the whole of this trial. Men of little or no position, with no thought for their selves, bravely attacked unarmed a gang of desperados armed with bombs and pistols, captured one, and nearly captured two others, drove off the marauders in flight, and only desisted when a number of them were injured and mutilated for life by the dacoits."

Among other conspicuous instances of resolution and gallantry are the seizure on the spot by a shop-keeper and wrestler in the Anárkali Bazar, Lahore, of the armed assassin of a head constable ; the resistance offered to the Walla Bridge murderers (in the course of which a villager and a boatman were shot dead) ; the repulse of a raid by armed trans-border Pathans on the village of Ránjha in the Jhelum District by the inhabitants who were instrumental in killing one and capturing three of the dacoits ; and the seizure of a gang of 28 armed dacoits by the villagers of Bhalri in the Karnál District.

Liberal rewards have been distributed by Government in acknowledgment of the services rendered by the public to the administration on the above and other occasions. Grants of land have been assigned to 122 persons ; remissions of land revenue amounting to over Rs. 10,000 have been granted to villages ; and no less than 2,631 members of the public, including village officers, have shared in monetary rewards. The Lieutenant-Governor wishes to take this opportunity of recording his appreciation of the opportune assistance rendered by Nawab Sir Behram Khan, Mazari, K.C.I.E., in quelling, and the Shahpur Maliks in checking the spread of, the disturbances which occurred in the south-western districts of the Province.

The reverse side of the shield is exhibited in the lawlessness referred to above. Where the prominent men of the localities stood for the maintenance of order no serious disturbance occurred : but in the majority of instances there was, in some cases, deliberate connivance and, in others, indifference or neglect of duty by the leaders of the people, resulting in the deplorable crimes which brought ruin and misery on hundreds of homes. On the whole, however, the Lieutenant-Governor finds much evidence to prove that both the police and the people are realising more and more the necessity of mutual co-operation for the prevention and detection of crime.

8. The circumstances of the year have permitted of no reduction in the number of punitive police posts imposed: on the contrary, considerable reinforcements have been necessitated, the system of quartering levies in particular tracts having in some cases been substituted for the location of isolated posts on individual villages. While the Lieutenant-Governor is ready to acknowledge the steadying influences exerted generally by the presence of punitive levies or posts in disturbed areas, he concurs in the opinion that their control by superior officers leaves something to be desired, and he trusts that the measures now being concerted by Colonel Dennys to infuse more vigour into their supervision will result in the production of a still higher standard of efficiency.

9. In the direction of preventive measures a freer use was made of section 110, Code of Criminal Procedure; but both forfeitures of security and actual recoveries declined to a marked degree, probably because of the engrossing pre-occupation of the police in other matters. It has been proposed to deal with the defects of the present system to which the Inspector-General refers by special legislation, and a Bill has now been drafted and circulated for opinion.

A more sparing resort was had to sections 106 and 107, Code of Criminal Procedure: but section 109 was more energetically worked. The Inspector-General is undoubtedly correct in his belief that a still more rigorous application of this section would materially contribute towards the prevention of crime, and his action in impressing his conviction on district officers is approved. Another matter which appears to demand increased attention on the part of the police is the rapid rise in the numbers (amounting to 35 per cent. in 4 years) of proclaimed offenders who have successfully eluded apprehension.

The continued success of the indigenous system of village patrols known as *naka bandi* and *thikri pahra* is emphasised both in the Inspector-General's and the Criminal Justice Reports: and further evidence of its popularity is furnished by the resolution passed unanimously last March by the Legislative Council which recommended the extended use of the system in co-operation with district officers and the police in the prevention of dacoities. The matured proposals of the Inspector-General for the legalisation of the system have recently been received and will now be taken into consideration by Government.

11. The actual strength of the permanent police force suffered a slight reduction, due to the transfer to the North-West Frontier Province of the officers and men employed on the frontier section of the railway: but this diminution was more than counter-balanced by the entertainment of a temporary additional body of 350 men as emergency police to assist in dealing with the abnormal conditions of the year. There was a net increase in expenditure of over 4 lakhs of rupees owing to the completion of the re-organization of the Criminal Investigation Department, the embargo on leave to gazetted officers and other measures taken to meet the situation created by the war.

The enquiry undertaken with a view to a redistribution of the police throughout the Province was carried to a successful conclusion during the year. The result has been a saving of about 3 lakhs of rupees in existing and contemplated recurring charges.

For the force as a whole the year under review was one of incessant strain and duty: and it was, perhaps, not unnatural in the circumstances that resignations and discharges show a marked increase. While larger rewards were granted than in the preceeding year, the more frequent infliction of departmental punishments and the more numerous escapes from police custody (exceeding the records of several past years) indicate, in the Lieutenant-Governor's opinion, not so much a deterioration of . oral among the rank and file, but rather the great strain to which the force was subjected and which it substained on the whole with remarkable success. The substantial enhancement of the pay of constables from the 1st April 1916 will, no doubt, relieve the situation and attract to the ranks a better class of men. The educational qualifications of the force as a whole exhibit steady improvement, but the proportion of illiterates among the rank and file is still as high as 65 per cent. The whole *personnel* of the upper subordinates is educated.

12. The Lieutenant-Governor has read with interest the criticisms by the Inspector-General of the system of Circle Inspectors which is held to have failed in its object by reason of the unsuitability of the officers called on to exercise supervision and the unnecessary multiplication of administrative units. In other words, the machinery is considered to be clogged by excessive supervision of the wrong type. His Honour will be ready to receive any further representations that Colonel Dennys may desire to make on the subject after consultation with selected officers. The question of direct appointments referred to by the Inspector-General is still under the consideration of Government.

13. The full benefits accruing from the re-organization of the Criminal Investigation Department became apparent during a year of exceptional stress and strain : and the Lieutenant-Governor desires to associate himself with the commendation bestowed on the Deputy Inspector-General, Mr. Tomkins, and the whole of his staff on whose shoulders fell an extremely heavy burden of work in connection with the revolutionary movement. Special credit is also due to the district executive and police officers who afforded such cordial and steadfast support to the officers of the Department during all phases of the crisis. The force generally may well be proud of the recognition of its work shown in Lieutenant-Colonel Dennys and Mr. Tomkins being admitted to the Order of the Indian Empire, while no less than 3 British and 8 Indian officers and men have been decorated with the King's Police Medal.

To the Darbars of the Native States and the General Officer Commanding the Lahore Divisional Area His Honour's cordial thanks are due for their co-operation and assistance in the repression of seditious attempts to subvert law and order ; and similar acknowledgments are made to the committees of Sikh gentlemen who at the cost of much personal trouble and risk (as the brutal murder of Sardar Bahadur Achhar Singh of Amritsar testifies) rendered much loyal and invaluable service to Government in watching and controlling the movements of thousands of returned emigrants dispersed throughout their districts.

14. It is satisfactory to find that, despite the pressure on all sides, the Railway Police have achieved a greater measure of success than in the previous year in the detection and prevention of crime, particularly in breaking up organized gangs of railway thieves. The record of the Finger Print Bureau again reflects credit on its staff : and the Lieutenant-Governor has much pleasure in endorsing the Inspector-General's approbation of Mr. Mercer's successful administration of the Police Training School, Phillaur, and of his training of the police reserves which have now reached a high standard of efficiency.

15. Finally, to Colonel Dennys and the officers and men of the force under his command the Lieutenant-Governor desires to express his warm appreciation of their devotion and loyalty during the troubled period of the past twelve months. The eventful year 1915 will always be memorable in the annals of the criminal administration of the Province : and no less worthy of recollection will be the skill, courage and loyalty with which the officers and men of the Police Force carried out their arduous duties in circumstances of grave anxiety and, often, in situations involving personal danger and self-sacrifice.

---

ORDER.—Ordered that a copy of the review be forwarded to the Inspector-General of Police, Punjab, for information and guidance, and that the report and review be circulated as usual to the Government of India, Home Department, and the Registrar, Chief Court, Punjab, for the information of the Hon'ble Judges.

Ordered also that the review be published in the *Punjab Government Gazette*.

By order of His Honour the Lieutenant-Governor of the Punjab,

L. FRENCH,

*Additional Secretary to Government, Punjab.*

## PART II.

## GENERAL.

### REVIEW OF THE REPORT ON THE ADMINISTRATION OF CIVIL JUSTICE IN THE PUNJAB FOR THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Home (Judicial) Department, No. 146-Judl.-2, dated the 27th September 1916.*

READ—

The report on the Administration of Civil Justice in the Punjab for the year 1915.

REMARKS.—The great war, which has affected to a greater or less extent nearly every branch of the administration, appears to have had but little disturbing influence on the activities of the Punjabi civil litigant. The number of suits instituted in 1915 was 199,166 or 3,900 more than in 1914, and about 7,000 above the average of the last 12 years. The Civil Courts have not had so large a volume of business since 1912, when the number of suits instituted very nearly reached a total of 200,000. Fortunately the rise in 1915 was entirely confined to the simplest class of suits, those for the recovery of money or moveable property. "Title and other" suits, which are, generally speaking, of greater complexity and value, declined by nearly 3,000 and the average value of suits of all classes dropped from Rs. 227 to Rs. 178, while nearly three-fourths of the suits were for property not exceeding Rs. 100 in value. The actual burden of work thrown on the courts must thus have been substantially lighter than in 1914. Nearly one-eighth of the cases were disposed of by Honorary

1225 PGG

Judges whose services are steadily growing in scope and value. But the ideal to which Government looks forward is that the great mass of the petty disputes, which for want of a better agency are now brought into court, should be settled by some suitable local machinery. Unfortunately the present Panchayat Act does not appear to provide that machinery in a form generally suitable, and though it has produced good results in a few districts it has not yet led to any appreciable diminution of litigation in courts. The Lieutenant-Governor, however, desires to have further experience of the flaws and defects in its working, and of the attitude of public opinion towards the general principles of local *panchayats*, as an alternative to the courts, before taking up the question of its amendment

2. Increases in institutions of 1,000 or more are reported from Rohtak, Hissar, Shahpur and Gujranwala, while the most noticeable decreases were in the three south-western districts of Muzaffargarh, Multan and Dera Ghazi Khan. No explanation has been offered for the rise in Hissar, while that suggested for Rohtak does not seem to the Lieutenant-Governor to be very convincing. Both districts suffered from severe scarcity during the latter part of the year, and unfavourable agricultural conditions usually have a restrictive effect on litigation. The increase in Shahpur is accounted for by the establishment of a new Munsif's Court at Bhera, and that in Gujranwala by increased prosperity due to recent extensions of canal irrigation. In Muzaffargarh, where institutions declined by nearly 1,500 from the unprecedented figure of 1914, this result is said to be due partly to the institution of co-operative credit societies and partly to the disturbances that occurred in the spring of 1915, when a large number of money-lenders' account-books were destroyed. It is a matter for satisfaction that in the majority of such cases creditors were subsequently able to obtain from their debtors acknowledgments of the sums due by means of arbitration proceedings. In Multan the drop in institutions is ascribed to the inauguration of the *panchayat* system, but it is probable that the distress caused by the failure of the monsoon was here, as in Dera Ghazi Khan, a contributing cause. On the whole it may be said that the general uneasiness and contraction of credit caused by the war—as shown in another form by the large withdrawal of savings banks deposits—aggravated by the recent bank failures stimulated creditors to endeavour to realise their outstandings, and that the tendency was encouraged or discouraged according as local economic conditions were favourable or unfavourable.

3. The number of pre-emption suits declined by nearly 650 to 4,472, a smaller figure than has been recorded in any year since 1911. The report again alludes to the demoralizing effect of litigation of this class and to the opinion held by the majority of the Judges that the right of pre-emption should be wholly abolished. The Lieutenant-Governor's views on this important question were recently published in the concluding paragraph of the resolution, No. 49-Judl -13 of 6th July 1916, which dealt with the report of the conference on the codification of customary law, but they may appropriately be summarised here. While readily accepting the Judges' view that much of the litigation under this head is of a speculative or blackmailing character, His Honour is unable to agree that a sufficiently strong case has been established for the abolition or even the radical amendment of a law passed after full discussion and consideration only three years ago It is natural that the courts, which see only the baser aspects of the custom, should generally condemn it as demoralising archaic and hampering to commercial development, and it cannot be denied that it leads to certain grave abuses. But the custom is founded on long-established ideas almost universal among the rural population, among whom it is derived from the conditions incident to the tenure of agricultural land, and it is generally followed by the population of at least the older towns, where it is based mainly on the provisions of the Muhammadan law for maintaining the privacy of the family. There must be thousands of cases, which

naturally never come to the knowledge of the courts, where the custom is followed without question, and its abolition would, in Sir Michael O'Dwyer's opinion, be generally regarded as an interference with the rights of the people to adhere to their old customs. At the same time His Honour is quite prepared to admit that there may be a case for restricting the right to sue for pre-emption on the lines that the conference on customary law proposed to limit the right to contest certain forms of alienation, and he has accordingly decided to include in the reference to the committee, which will eventually be appointed to formulate a detailed scheme for the codification of certain branches of the customary law, a direction to ascertain public opinion in regard to the maintenance or modification of the right of pre-emption. Meanwhile Government is always prepared to consider recommendations for declaring any particular locality exempt from the right of pre-emption by notification under section 8 (2) of the Act of 1913, when it can be established that in such areas the right is habitually exercised with a purely speculative or blackmailing object.

4. The report deals at some length with the working of that admittedly unsatisfactory law, the Provincial Insolvency Act, III of 1907, and the extracts from Mr. Wilberforce's report illustrat · in a striking manner the unsuitability of the Act to the Punjab agricultural population. This aspect of the question has lately been under the consideration of the Lieutenant-Governor who, after consulting a number of his more experienced officers, has recently, in continuation of previous proposals for the general amendment of the Act, submitted to the Government of India certain specific recommendations with the object of enabling the Courts to dismiss summarily an insolvency petition presented by an agriculturist debtor, when it is apparent that he could if he chose satisfy his creditors' claims. It is, however, understood that there is little prospect of the revision of the Act being undertaken at an early date.

5. Under present conditions work under the Act continues steadily to increase, the number of applications dealt with and the number of declared insolvents before the courts during the last six years having been as follows:—

| Year. | Applications dealt with. | Insolvents before the Courts. |
|---|---|---|
| 1911 ... ... ... ... ... | 1,022 | 443 |
| 1912 ... ... ... ... ... | 1,368 | 694 |
| 1913 ... ... ... ... ... | 2,120 | 1,005 |
| 1914 ... ... ... ... ... | 2,159 | 1,491 |
| 1915 ... ... ... ... ... | 2,353 | 1,74[illegible] |

The percentage of persons discharged under section 44 of the Act becomes higher every year. In 1912 it was only 17, in 1914 it increased to 25 ; in 1915 the figure was 29. The amount of insolvents' assets realised during the year was only a little over Rs. 3 lakhs, while the amount of creditors claim unsatisfied at the close of the year aggregated nealy Rs. 34 lakhs. Both these figures compare unfavourably with those for 1914.

The strong measures taken by Mr. Ellis, as District Judge of Jhang, to cope with the scandalous abuse of the Act in that district were described in paragraph 9 of the report for 1914. They are shown in paragraph 12 of the present report to have been eminently successful, and the Lieutenant Governor thinks they might well be adopted in other districts where similar abuses are prevalent.

Official Receivers were appointed some time ago for the Amritsar, Lahore, Lyallpur and Ráwalpindi Districts. Government has recently, on the recommendation of the Chief Court, sanctioned the appointment of Official Receivers, as an experimental measure for three years, for the Jullundur, Gujrát, Gujránwála, Rohtak, Karnál and Simla Districts. In some cases one Receiver will have charge of two districts.

6. The number of applications for the appointment of a guardian under Act VIII of 1890 rose from 2,018 in 1914 to 2,140 in 1915, but is considerably below the average of previous years. The rules framed under the Act by the Chief Court were amended and simplified early in the year and this had the effect of appreciably lightening the work of the courts in administering minors' estates, but the remarks in paragraph 15 of the report indicate that a good deal of time is still wasted in dealing with applications for appointment as guardian, and the Lieutenant-Governor doubts whether all courts realize that under section 7 of the Act it is purely optional for the court to appoint a guardian for the minor's person or property and that such appointment should only be made when the court is satisfied that it will be for the welfare of the minor.

His Honour is glad to notice that nearly one-half of the sums belonging to minors' estates, which had been deposited in banks now in liquidation, has been recovered and that further realisations are expected.

7. As pointed out in paragraph 1 of this review the real burden of work imposed on the courts must have been distinctly lighter than in 1914, and this view is corroborated by the increase of over 2,000 in the number of original suits disposed of, and by a substantially better outturn on the part of District and Sessions Judges. It is, however, disappointing to find that the average duration was 78 days for contested and 39 for uncontested original suits, as compared with 74 and 37 days, respectively, in 1914, while the average duration of civil appeals rose from 141 to 164 days. No doubt the provincial average is spoiled by the bad returns from certain districts, such as Hoshiárpur, Multán and Kángra, where individual courts are apparently to blame, and by the fact that nearly 1,000 suits are said to have been adjourned owing to the parties being absent from the Punjab on active service. The vigorous action taken by Mr. Prenter, District Judge of Jhelum, to reduce an enormous legacy of arrears deserves the commendation of the Hon'ble Judges and imitation by other courts burdened with heavy arrears.

8. The report shows that during the last few years there has been a progressive increase in the amount of civil work coming before the Chief Court. Institutions are steadily rising, and in 1915 the number of first appeals—by far the heaviest class of cases—instituted was 422, or $2\frac{1}{2}$ times as many as in 1914. In the circumstances the Lieutenant-Governor ventures to congratulate the Hon'ble Judges on the continuous increase in the number of cases disposed of and on the substantial reduction in the pending file during the first 6 months of 1916. The satisfactory results so far achieved give reason to hope that within a year or two the arrears of long standing, which are often quoted as a reproach to our judicial system, will be wiped out and that the Court will be well able to keep pace with its steadily increasing tale of work.

9. Liquidation proceedings in the case of the Peoples' and Amritsar Banks appear to make slow progress, doubtless owing to causes not under the control of the supervising court. But the Lieutenant-Governor is disposed to think that it might reassure creditors if the Inspecting Judge of the Chief Court could find time during the approaching winter for a thorough examination of the position and prospects of these banks. Rai Bahadur Lala Damodar Das is entitled to credit for his promptitude in dealing with the other liquidation proceedings mentioned in paragraph 31 of the Report and for the good results he has obtained.

10. Finally, His Honour desires to convey to the Hon'ble Judges his thanks for an interesting report and to acknowledge the valuable work done by the Chief Court and by Subordinate Courts during the year. The adjudication of civil disputes may seem to many judicial officers a monotonous task on which to be engaged during the most eventful crisis of modern history, but its steady and conscientious performance has contributed in no small measure to the general confidence in the stability of British institutions and in particular of British justice.

ORDER.--Ordered that the above review be forwarded to the Registrar, Chief Court, for the information of the Hon'ble Judges.

Ordered, also, that the Report and Review be forwarded to the Government of India, Home Department, and that the Review be published in the *Punjab Government Gazettee.*

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Revenue Secretary to Government, Punjab.*

## REVIEW OF THE REPORT ON THE ADMINISTRATION OF CRIMINAL JUSTICE IN THE PUNJAB, FOR THE YEAR 1915.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab, in the Home (Judicial) Department, No.* 501 *Judl.*-1, *dated* 27*th September* 1916.

READ :—

The Report on the Administration of Criminal Justice in the Punjab for the year 1915.

REMARKS :—The total number of reported offences has been steadily declining ever since the high water mark of criminal litigation was reached in 1912. In the year 1915, 202,220 offences were reported or about 2,600 less than in 1914. Unfortunately these figures, though indicating a tendency for false and frivolous litigation to diminish, do not imply any real reduction in the amount of crime. True cases, including reports pending from the previous year, rose from 132,529 to 133,140, while in the more serious class of offences those under the Indian Penal Code, the increase was from 86,687 to 88,142 or nearly 2 per cent. The explanation is not far to seek. As has been remarked, in the review of the Police Administration Report, the first half of the year was marked by an exceptionally severe visitation of plague, and the latter half by acute scarcity and high prices. These causes, combined with the political and economic unrest incidental to the war, acted as a stimulus to the disorderly elements of the community, and though the more violent form of the resultant lawlessness, such as the *Ghadr* conspiracy and the dacoities of the South-Western Punjab, were dealt with by special tribunals not under the control of the Chief Court and are therefore excluded from the scope of the Judges' report, still it is not surprising that the amount of serious crime with no special political character should have been higher than in 1914. A similar but smaller increase was observed in the neighbouring United Provinces, where the disturbing influences was less marked than in the Punjab, and as remarked by the Hon'ble Judges the efforts of the police and magistracy to limit the scope of those influences appear to have been wonderfully successful.

There was a decline from 489 to 456 in murder cases, and a marked falling off in cases of attempts at murder, culpable homicide, and in serious

offences against the person generally; on the other hand most classes of serious offences against property show a substantial increase. True cases of robbery and dacoity rose from 474 to 702, but the increase was practically confined to the Jhang and Muzaffargarh Districts and to three central districts, Lahore, Gurdáspur and Jullundur, where the activities of the *Ghadr* party were specially marked. Burglaries, thefts and cases of receiving stolen property were all considerably higher than in 1914, a result to be expected in a year of severe agricultural depression, and but for the employment in several districts of the *thikri pahra* system it is probabl ethat a much lirger number of offences against property would have been committed.

Offences relating to marriage continue to decline steadi'y though slowly, doubtless as the result of the registration system which in some form or other is now to be found in many districts in the Province. The Lieu'enant-Governor agrees with the Judges that much credit is due to the various officers who have introduced and organised this system in their districts and will be glad to see its extension to districts where it has not hitherto been introduced. It is said to be unpopular among certain classes, who dislike the obligation to make a public declaration regarding marriages, but refusals to do so are almost unknown and the general consensus of opinion, both official and non-official, is that the system has proved most efficacious in checking false matrimonial cases.

2. Turning to the working of the courts, the Lieutenant-Governor is disappointed to observe that there was a drop of no less than 3,339 in the number of complaints summarily dismissed, though the decline in the number of offences reported was, as already observed, only 2,600, while compensation was awarded under section 250 of the Code of Criminal Procedure in only 870 cases, as against 960 in 1914. It is most discouraging to find that the admonitions of the Hon'ble Judges regarding the wider use of sections 203 and 250 of the Code, repeated year after year in their annual reports and month after month in their remarks on the returns from subordinate courts, have borne so little fruit. For it cannot be disputed that the most unsatisfactory feature of our criminal administration is the appalling waste of time and power involved in the investigation of false and frivolous cases. The figures for the notoriously litigious district of Hoshiárpur, quoted in paragraph 20 of the report, are a striking illustration of this. Of 6,760 accused persons dealt with by the criminal courts only 1,217 were convicted and it follows that some thousands of accused persons were unnecessarily dragged into the courts. Yet compensation was awarded only in 19 cases, a result which the District Magistrate admits is deplorable. The average Indian Magistrate's apparently ineradicable tendency to take the line of least resistance is mainly responsible and the Lieutenant-Governor reluctantly agrees with the Hon'ble Judges that little improvement can be expected until the elaborate procedure of section 250 is simplified. The Local Government's views on this question and also on the Judges' suggestion—in which His Honour entirely concurs—that Magistrates of the 3rd class should be empowered to hold or direct enquiries under section 202, have already been communicated to the Government of India in connection with the contemplated revision of the Code.

3. Of cases brought to trial 73 per cent. resulted in conviction or compromise as in 1914, but there was a satisfactory rise from 37 to 38 in the percentage of convictions. Both in 1912 and 1913 the percentage was 36 so there has been a progressive improvement in recent years. The average duration of original criminal trials remained at 19 days, as in 1914. The causes of the fluctuations from district to district are discussed in paragraphs 24 and 25 of the report, and the Hon'ble Judges' conclusion is that the pace of the judicial machine could be greatly accelerated by improved methods of working, and particularly by the avoidance of unnecessary adjournments. This again is a

point which, the Lieutenant-Governor understands, the Judges are constantly impressing on subordinate courts, though hitherto little improvement is evident. The subject will doubtless engage the close attention of the inspecting Judge who will be re appointed for part of the approaching winter.

In Sessions Courts in spite of fewer disposals the average duration of sessions trials rose from 48 to 54 days and that of appeals from 27 to 29 days. No explanation is given in the report, but His Honour trusts that next year's figures will show an improvement especially in the disposals of sessions trials which as shown in previous reviews compares unfavourably with the figures of other Provinces. Experience has shown that the greater the delay between the order of commitment and the commencement of the trial, the smaller is the chance of securing the convictions of the guilty.

The increase in the number of section 30 cases disposed of by District Magistrates and other specially empowered Magistrates is creditable, in view of the many pressing pre-occupations of the year. The commendation which the Hon'ble Judges have bestowed on Mr. Bosworth-Smith in this connection for his work as District Magistrate of Ferozepore is endorsed by the Lieutenant-Governor, who has repeatedly expressed the view that it is one of the most important duties of a District Officer to take an adequate share in the criminal administration of his charge.

4. Honorary Magistrates, either sitting singly or on a Bench, decided more than 31,000 cases or about 28 per cent. of the total number. The thanks of Government are due for the great assistance rendered by this unpaid agency and more particularly by those gentlemen whose names are mentioned in paragraph 26 of the report.

5. The number of persons bound over to keep the peace is given in paragraph 16 of the report as 13,287 though from column 15 of statement No. II (page VII) it would appear to be 12,414. In either case the figure is lower than that recorded in any year since 1910. In certain districts, Siálkot for example, section 107 of the Criminal Procedure Code appears to be widely used by those preferring false complaints, and the drop in the numbur of persons convicted may be attributed to some decline in the volume of frivolous litigation. Proceedings under sections 109 and 110, which are usually initiated by the police, were, however, more freely resorted to than for many years previously. The number of persons bound over to be of good behaviour was 4,731, the previous highest recorded figure having been 3,887 in 1913. In Miánwáli and Ludhiána this procedure was widely employed to deal with members of criminal tribes, and doubtless its increased use in Rohtak, Karnál and Ambála is due to the same cause, as these districts have lately been infested by immigrant gangs from the United Provinces. Other districts where it was freely employed were Amritsar and Ferozepore, both of which were for a time centres of sinister revolutionary activity.

6. Mr. Butler's remarks, quoted in paragraph 30 of the report on Mr. Calvert's scheme for dealing with perjury, are interesting, but Government in commending a practical suggestion for dealing with one common phase of perjury did not of course intend that other forms of perjury, whether on behalf of the prosecution or the defence, should be condoned. During the year the number of persons tried for false evidence and cognate offences (sections 194—200, Indian Penal Code) was only 482 of whom 208 were convicted. These figures indicate rather extraordinary laxity than excessive zeal on the part of the courts in dealing with false witnesses, an it is clear that much more activity could be shown without the necessity of appointing an extra staff. Sir Michael O'Dwyer would be glad to hear further regarding the results of the Attock experiment.

7. One of the most obvious and at the same time most effective tests of the working of the criminal administration in the Punjab is its success in dealing with murder. The following table is interesting as showing the fluctuations in recent years :—

| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|
| | | Persons. | | | Percentage | |
| Years. | Number of true cases of murder. | Tried. | Convicted. | Death sentences confirmed by Chief Court. | Of column 4 to column 3. | Of column 5 to column 4. |
| 1909 ... ... ... | 397 | 757 | 339 | 103 | 45 | 30 |
| 1910 ... ... ... | 402 | 601 | 336 | 84 | 56 | 25 |
| 1911 ... ... ... | 442 | 734 | 364 | 69 | 49 | 19 |
| 1912 ... ... ... | 515 | 794 | 427 | 81 | 54 | 19 |
| 1913 ... ... ... | 509 | 973 | 459 | 147 | 47 | 32 |
| 1914 ... ... ... | 489 | 949 | 465 | 150 | 49 | 32 |
| 1915 ... ... | 456 | 809 | 381 | 144 | 47 | 38 |

In 1915, 144 death sentences was confirmed, or only 6 less than in 1914. The figure for that year was the highest ever recorded. The figure for 1915 does not of course include the persons executed as the result of the first conspiracy trial conducted by the Lahore special tribunal, so actually the number of executions carried out in 1915 was higher than in any previous year.

Practically all the cases in which a capital sentence is confirmed by the Chief Court come before the Lieutenant-Governor with petitions for mercy, and he also sees in connection with the release of convicts transported for life many of the judgments of a previous generation of Judges. There can, in his opinion, be little doubt that during the last few years there has been less reluctance than formerly to impose the extreme penalty on convicted murderers, and that this change of policy has had a marked deterrent effect. The convicted murderers' chances of escaping the extreme penalty are now only half what they were 5 years ago, and this more robust policy is probably one cause of the progressive decline in the number of murders.

8. The Lieutenant-Governor is glad to see that the courts generally are realising more and more the necessity of adequate sentences for the more serious form of crime prevalent in the Province. This is illustrated by the following table which compares the number of sentences of 2 years and upwards to total sentences of imprisonment in recent years :—

| 1 | 2 | 3 | 4 |
|---|---|---|---|
| Years. | Total number sentenced to imprisonment. | Number sentenced to 2 years and upwards. | Proportion of column 3 to column 2. |
| | | | Per cent. |
| 1913 ... ... ... ... ... | 17,123 | 1,809 | 10·6 |
| 1914 ... ... ... ... ... | 18,114 | 1,937 | 10·7 |
| 1915 ... ... ... ... ... | 20,053 | 2,676 | 13·3 |

results of those tribunals. Two such bodies were constituted, each consisting of three members including two Sessions Judges. The Multán tribunal dealt with some of the most serious of the organised dacoities perpetrated in the South-West Punjab in the spring 1915. The results are summarised below :—

| | | |
|---|---|---|
| Total number of persons tried by the tribunal | ... | 2,934 |
| Number discharged or acquitted | ... | 2,859 |
| Number absconding or died | ... | 135 |
| Number convicted | ... | 75 |

The sentences usually ranged from 5 to 10 years' imprisonment or transportation.

The Lahore tribunal in 1915 dealt with the first Lahore conspiracy case and its many ramifications, all of which were off-shoots of the revolutionary movement inspired by the returned emigrants. The total number of persons dealt with was 74. Of these 66 were convicted and punished as follows :— Death 16, transportation for life or for a term 42, imprisonment 8.

14. In conclusion the Lieutenant-Governor desires to thank the Hon'ble Judges for their interesting report, and at the same time to express his cordial acknowledgments for the valuable support which they have rendered to the administration by their efficient supervision of criminal justice during a year of great stress and anxiety.

---

ORDER.—Ordered that a copy of the above remarks be forwarded to the Registrar, Chief Court, Punjab, for the information of the Hon'ble Judges, and that the report and review be circulated as usual and copies sent to the Government of India.

Ordered, also, that the review be published in the *Punjab Government Gazette.*

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Revenue Secretary to Government, Punjab.*

1225 PGG - 939—6-10-16 - SGPP Lahore.

Apart from general preventive measures in which, as explained in the review of the Police report, the administration is steadily enlisting the co-operation of the community, the most effective deterrents on the criminal classes are the increased risk of detection and the prospect of stern punishment in the event of conviction.

9. In regard to the general principles which should regulate the infliction of fines the Lieutenant-Governor agrees with the Judges that, while vindictive fines are undesirable, it is right to endeavour to recover some proportion of the large expenditure on courts and police from persons proved to belong to the class which necessitates that expenditure. This principle has been recognized in a recent amendment of the English law, which gives the court power in certain circumstances to order the recovery from the convict of the expenses of his prosecution.

10. The suggestion, discussed in paragraph 33 of the report, that the lower appellate courts should be given power to enhance sentences on appeal has already been under the consideration of the Local Government. The Lieutenant-Governor, after consulting the Hon'ble Judges and his legal advisers, came to the conclusion that it would be difficult to establish a case for restoring to such courts a power which was conferred on them by the Code of Criminal Procedure of 1872, but which was withdrawn by the Code of 1882; and His Honour was not satisfied that the powers which exist are inadequate for the correction of isolated errors of judgment in the matter of sentences. As the present law stands it is always open to the lower appellate court, if it considers a sentence grossly inadequate, to refer the case to the Chief Court and in practice this is not infrequently done. In view, however, of the fact that several Sessions Judges favour the suggestion, the Lieutenant-Governor will be glad if the Hon'ble Judges will make the further investigation indicated in paragraph 33 while the amendment of the Criminal Procedure Code is still under consideration.

11. The subject of monetary and other rewards for assistance to the criminal administration, to which allusion is made in paragraph 40 of the report, has been discussed at some length in the Lieutenant-Governor's review of the Police administration report, in which it is pointed out that in addition to liberal grants of land to individuals and remissions of land revenue, no less than 2,631 members of the public have received cash rewards. His Honour is unable to agree with Mr. Bosworth-Smith that monetary rewards would usually be more appreciated than grants of land. His experience is that the average Punjabi very naturally prefers the perpetual endowment created by a grant of land to any other form of reward. Grants of land are, however, in practice reserved for very special cases of signal assistance, and Government is quite willing to supplement such grants by a liberal provision for cash rewards.

12. A proposal to enhance the present eight-anna court fee on complaint of non-cognizable offences was referred to the Local Government by the Government of India in 1912, and was supported by Sir Louis Dane on the ground that the change was justified by the decline in the purchasing value of the rupee since 1870. But he did not anticipate that the enhancement of the court fee would have any but a slight effect in diminishing the number of frivolous complaints. Ultimately the Government of India decided that no change should be made. The question of revising the Court Fees Act is, however, again under consideration, and should the Hon'ble Judges desire to revise the proposal of 1912 they will doubtless include a recommendation to this effect in their reply on the draft Bill which has been sent to them for opinion.

13. Although, as explained in paragraph 22 of the report, the work of the special tribunals constituted under the Defence of India Act is outside the scope of the report, the present is a suitable opportunity for reviewing the

Registered No. L. 861.

## PART II.

## GENERAL.

### REVIEW OF THE REPORT ON THE INTERNAL LAND TRADE OF THE PUNJAB BY RAIL AND RIVER FOR THE TRIENNIUM 1913-14 to 1915-16.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Commerce and Industry Department, No. 1052, dated 8th November 1916.*

READ—

The Report on the Internal Land Trade of the Punjab by rail and river for the triennium 1913-14 to 1915-16.

REMARKS :—

1. *Features of the season.*—In the triennium under report the seasons were on the whole favourable. In 1913 the spring crop was normal and the autumn harvest above normal, the outturn of cotton surpassing all previous records. In 1914 the spring harvest was normal or nearly normal over most of the Punjab except in the south-east where there was some scarcity, entailing the import of cotton seed, bajra and jowar from the neighbouring districts of the United Provinces. The kharif, however, was good. In 1915, the spring harvest was good and the outturn of rice, maize and sugarcane in the autumn was fairly satisfactory, but the other kharif crops were considerably below the normal.

2. *Trade and prices.*—The price of wheat ranged between Rs. 3-7-0 and Rs. 3-14-0 per maund in 1913-14. The falling off in the demand for export to Europe owing to the good harvests in Canada, America and Australia was to a large extent counterbalanced by increased exports of grain and fodder to the United Provinces necessitated by the widespread scarcity which prevailed there. The war and the closing of the Dardanelles in the following year caused a great demand for wheat for export and the price which was Rs. 3-10-0 at Lahore at the end of July 1914 rose rapidly and without a check to Rs. 5-14-0 in the middle of February. The Government prohibition of export

produced an immediate effect and the price fell even more rapidly than it had risen, reaching its lowest point (Rs. 3-10-0 to Rs. 3-12-0) during May and June 1915. Thereafter it again rose slightly owing to purchases for export under Government control and remained fairly steady at about Rs. 4-6-0 to Rs. 4-8-0 till the end of January 1916, when a fall occurred, the price at Lahore at the end of March being Rs. 3-9-0. Throughout the latter half of the period under consideration the market exhibited extraordinary sensitiveness. This is partly due to the fact that the amount available for export was limited, while the fact that the chief local dealers are largely interconnected is apt to produce partial corners in the commodity. It would appear that these dealers are endowed with a strong spirit of speculation which leads them to hold up stocks even when prices are favourable and market prospects by no means clear, and to this must be ascribed in large measure the abnormal prices which prevailed during the winter of 1914-15.

The fact that in spite of the comparatively good spring harvests in the preceding years the exports of wheat in 1915-16 were some 80 lakhs of maunds less than the average of the five previous years shows that the high prices which prevailed during most of the year were largely artificial.

The prices of other food-grains to a large extent rose and fell in sympathy with that of wheat. Gram was also exported in considerable quantities in 1915-16 for the use of the army.

The demand for cotton for export to Germany and Austria having been cut off by the war the price fell sharply in the autumn of 1914. It recovered somewhat later and the increased Japanese demand combined with the poor crop in 1915 assisted the recovery.

The war created a strong demand for woollen goods and the price and the quantity manufactured and exported from the province both show appreciable increases, the net exports being worth over 21 lakhs of rupees. Cotton piece-goods as usual contributed largely to the total of imports. Quantities steadily increased till the outbreak of war, in spite of a slight set back in 1913 owing to the collapse of credit in consequence of the numerous bank failures. The war temporarily checked foreign imports, but a slight recovery took place in 1915-16. Indian factories were not slow to take advantage of the opportunity and in 1915-16 an average import of 5⅓ lakhs of maunds was increased to 6¾. Many other articles were affected by the war, especially drugs, dyes, sugar and machinery and shew diminished totals, but coal and coke, which have been in greater demand owing to Railway extensions in the province, return largely enhanced figures.

The imports of treasure increased rapidly during the triennium though in the latter half gold was to a large extent replaced by silver owing to the stoppage of the issue of sovereigns from the treasuries.

Although the balance of trade, if the large imports of treasure averaging 724½ lakhs per annum be included, is still slightly against the province, and although the statistics once more emphasize the fact that the Punjab is almost entirely dependent on agriculture, the returns confirm the views expressed in the previous report as to the steadily increasing prosperity of the province. The banking crisis of 1913-14, though serious, created only a temporary set back, while it would seem that on the whole the war so far has not affected the general standard of comfort or the purchasing capacity of the people. Indeed the enormous recruitment of about 100,000 men for the combatant forces and some tens of thousands of followers has caused a great influx of wealth int many parts of the province, and this probably is one of the causes of the increased imports of treasure.

---

ORDER.—Ordered that the foregoing remarks be published in the *Punjab Gazette* and communicated to the Director of Land Records, Punjab; also that they be forwarded with a copy of the report to the Director of Statistics, Calcutta.

By order of His Honour the Lieutenant-Governor of the Punjab,

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

## REVIEW OF THE ANNUAL REPORT ON THE WORKING OF CO-OPERATIVE SOCIETIES IN THE PUNJAB FOR THE YEAR ENDING 31ST JULY 1916.

---

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Department of Revenue and Agriculture—Agriculture, No.* 191, *dated the* 15*th November* 1916.

READ—

Letter No. 491—44-1, dated 30th October 1916, from the Senior Secretary to the Financial Commissioners, Punjab, submitting with the remarks of the Financial Commissioner the Annual Report on the working of Co-operative Societies in the Punjab for the year ending 31st July 1916.

REMARKS.—The adverse conditions with which the co-operative movement in the Province had to contend in the two previous years—the war and the banking crisis—were aggravated in the year 1915-16 by two successive bad harvests. In the circumstances some set-back might have been anticipated, but the societies again on the whole stood the strain with remarkable success and their sphere of usefulness to the agricultural community was naturally extended by the unfavourable character of the seasons. But, as the Financial Commissioner remarks, the past year was one of consolidation rather than of expansion, and the time was peculiarly opportune for such consolidation as the valuable recommendations of the Committee on co-operation enabled the Registrar and his assistants to apply themselves to remedying, so far as an inadequate establishment would allow, the defects in the working of the system. Muzaffargarh, where relations between the peasantry and local money-lenders were exceptionally strained, was the only fresh district in which societies were started. In all 125 new societies were registered and 71 were removed from the register, making a net increase of 54. In many respects the year was one of substantial progress, and though the amount of deposits declined by Rs. 6½ lakhs, the expansion of the movement was not retarded by any want of confidence.

2. The paid-up share capital of agricultural societies increased by nearly Rs. 5 lakhs, and the reserve fund by about Rs. 12·3 lakhs, so that in spite of the falling-off in deposits there was a net increase of Rs. 11·6 lakhs in the working capital, which now amounts to nearly one million sterling. The increase in the reserve fund—nearly double the increase in the previous year—is attributed to the special attention which was given to the prompt repayment of interest on loans. A similar increase in the amount of principal repaid was not to be expected in a year in which harvests were so bad, but the amount overdue was reduced by nearly Rs. 2½ lakhs, and the situation gives no cause for anxiety. The Registrar indeed is of opinion that two good harvests would more than wipe off all arrears and would yield more money than could conveniently be utilised. The Lieutenant-Governor would go even further, and in the two facts that the indebtedness of members to the societies during the year—which was one of scarcity in most of the Province—increased by 8 lakhs, and that the share of members in the working capital increased by 17·3 lakhs he finds the strongest arguments that the societies are duly fulfilling the objects for which they were created. A third fact of cardinal importance might be noted—the gradual but steady decrease in the rate of interest on loans—and as pointed out in former reviews this reduction has beneficial results far beyond the range of the societies. The share capital and reserve fund together now constitute over 47 per cent. of the working capital as compared with 38 per cent. last year, and including members' deposits the proportion of the working capital owned by members has risen from 49 to 54 per cent. The Committee on co-operation expressed the opinion that the primary aim of every society should be to build

up a reserve fund mainly in the form of surplus assets, until it obtains a capital of its own sufficient to meet all its needs and thus becomes independent of outside assistance. This ideal has, it appears, been attained in the case of a number of societies in which, on the completion of the tenth year of their existence, the accumulated profits have been divided, one-fourth going to the reserve and the remainder to the members in the form of non-returnable shares. The result is that these societies are now reported to be practically independent of outside assistance, the new share capital being sufficient for the members' needs, while the reserve is being deposited outside the movement. At the same time the rate of interest has been reduced to 8 or 9 per cent. on loans punctually repaid. The situation of these societies is thus eminently satisfactory: they are self-sufficing, and their members are now able to obtain loans at a reasonable rate of interest—thus securing by co-operation, in the words of Sir Edward Maclagan's Committee, one of "the material advantages available to wealthy or powerful persons." At the same time with their reserve fund invested outside the movement, presumably in some form in which it is readily available, they are in possession of the fluid resources for which ordinarily the primary society must rely upon the Central Bank. It must not, however, be forgotten that the position of these societies, in which according to their original constitution the share capital was returnable to the members after ten years, would have been very different had the members put immediate individual gain before their future common welfare. The favourable position in which these societies now find themselves through the wise action of their members affords, therefore, no real justification for the system of returnable shares on which they were founded.

3. The share capital and reserve fund of Central Banks rose from about Rs. $7\frac{1}{2}$ lakhs to over Rs. $10\frac{1}{4}$ lakhs,—a sum which represents nearly one-third of their liabilities,—and this is regarded by the Registrar as very strong evidence of their stability, the Committee on co-operation having recommended that the proportion should be 1 : 8. This recommendation is, however, qualified by the further one that Central Banks should be required to maintain as fluid resources a sum sufficient to meet half the fixed deposits falling due during the ensuing year, even if no fresh deposits were received and no repayment of loans made. From this point of view the position of the Central Banks does not appear so satisfactory. Their cash balances and the value of their investments at the beginning of the year amounted to only Rs. 3,83,279, and to this may be added the amount of their cash credits with Joint Stock Banks remaining undrawn—a sum which cannot be ascertained from the report or statements but which is presumably not more than half the total amount of the existing cash credits or about Rs. 2,30,000. At any rate it may be taken that fluid resources certainly did not exceed Rs. 6 lakhs at the beginning of the year, while repayments of loans and deposits amounted to about Rs. 27 lakhs. The fluid resources were thus not half the amount considered necessary by Sir Edward Maclagan's Committee. By the close of the year fluid resources had fallen to about Rs. 5 lakhs, while gross liabilities had decreased but little and though the banks had no difficulty in meeting the calls made upon them during the year, it is obvious that the most careful attention must be devoted to the question of fluid resources, if safety is to be assured. The difficulty of course lies in the absence of an external financing agency capable, by reason of the nature of its ordinary banking business, of utilizing to advantage the existing fluid resources of Central Banks without rendering them inaccessible at times of need, and at the same time of supplementing those resources if in a special crisis they prove inadequate to meet the calls made upon them. The concession recently extended to the Punjab of refunding 75 per cent. of the money order commission between the societies and their financing agencies will make the fluid resources more readily available, and if the scheme referred to in paragraph 17 of the report, to enable Central Banks to utilise each other's surplus balances, materialises, it will assist towards the same end.

4. In various minor directions the recommendations of the Committee on co-operation are being put into practice. The responsibility of members is gradually being enforced by insistence on all members being share-holders. Similar efforts are being made to enable primary societies to become share-holders in existing Central Banks, and care is being taken in starting new banks to reserve for such societies at least half the shares. A start has also been made with a system by which the Registrar fixes the maximum credit to be given to primary societies, the Central Banks being left thereafter to use their discretion in granting loans up to the maximum so fixed.

Two problems to which reference is made in the report require notice. The first is the question as to how far it is justifiable to grant or extend loans so as to enable cultivators to hold their crops for a rise. The Committee on co-operation was of opinion that such loans should be permitted for a maximum period of three months, and for the present this restriction seems all that is necessary. It is a question, however, whether, if the practice of holding up crops in this manner became at all general, such speculation with the assistance of a co-operative society's funds should be permitted at all. The second problem is that presented by the fraudulent use of insolvency proceedings by debtors of societies. This abuse has not yet assumed very threatening proportions so far as co-operative societies are concerned, and as the Registrar points out the danger arises to societies only if the true principles of co-operation and sound rules of business are neglected. As regards the combination between the co-operative movement and other movements for the improvement of agriculture, the Lieutenant-Governor emphatically endorses the view of the Financial Commissioner in paragraph 9 of his review, that such combination is most desirable and should be encouraged by every legitimate means.

5. The insufficiency of the inspecting staff is referred to in many passages in the report, and most of the defects that mar the present stage of the co-operative movement are attributed to this cause. The Lieutenant-Governor fully recognizes that the rapid expansion of the movement for which the province now appears to be ripe must, if it is to proceed on sound lines, be preceded by a substantial addition to the supervising staff. For a complete and adequate reorganisation we must wait till financial conditions improve, but Government will do all in its power to make good the most glaring deficiencies. The Registrar was given the assistance of two gazetted officers last cold weather, and comprehensive proposals for increasing the number of Inspectors are now under the consideration of Government. A strong argument for such increase is the unequal rate of progress in different parts of the Province. The four submontane and agriculturally favoured districts of Gurdaspur, Hoshiarpur, Jullundur and Sialkot account for over half the existing total number of societies and members, and almost half of the working capital, while the movement has so far made little progress in the districts of the south-east and south-west of the Province, where the conditions of a large part of the agricultural population stand in urgent need of the amelioration that co-operative credit can best effect. Meanwhile all credit is due for the success which has already been obtained with inadequate means, and the Lieutenant-Governor desires to endorse most cordially the Financial Commissioner's appreciation of the excellent work performed by Mr. Langley during his long tenure of the office of Registrar. Mr. Calvert has entered upon his duties with an enthusiasm which promises to ensure the continued success of the movement, and has written a most interesting and suggestive report. He has been ably supported by Mr. Strickland and His Honour's acknowledgments are due to him and the other officers mentioned by Mr. Calvert. His Honour also takes this opportunity of congratulating Khan Abdul Majid Khan on the promotion which he has so well earned.

6. His Honour notes that the report was submitted by the Registrar nearly three weeks after the prescribed date.

ORDER.—Ordered that a copy of the foregoing remarks be published in the *Punjab Gazette*, and communicated to the Financial Commissioners, Punjab. Also that a copy, together with a copy of the report, be forwarded to the Government of India in the Revenue and Agricultural Department and all Local Governments and Administrations for information.

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Revenue Secretary to Government, Punjab.*

**REVIEW OF THE ADMINISTRATION REPORT OF THE PUBLIC WORKS DEPARTMENT, BUILDINGS AND ROADS BRANCH, FOR 1915-16.**

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Public Works Department, Buildings and Roads Branch, No. 1350-B., dated 15th November 1916.*

READ—

The Administration Report of the Public Works Department, Buildings and Roads Branch, for 1915-16.

*Review.*—In a time of financial stress public works are naturally the first to undergo reduction. The expenditure of 83 lakhs in 1914-15 has dwindled in 1915-16 to 68½ lakhs and will be still further reduced in the current year. Corresponding reductions have as far as possible been made in the establishment, the services of the Royal Engineers and Imperial Service Officers of the Department have been largely drawn upon by the Commander-in-Chief in India, and the War Office in England. Out of 43 officers on the Imperial establishment the services of 12 had been placed at the disposal of the Military authorities by the close of the year. Notwithstanding the consequent saving on the pay of officers owing to reduced expenditure the percentage of establishment charges was 22·21 per cent. against 15·03 per cent. in 1914-15.

2. It is satisfactory to note that after allowing for special items the lapse on the provincial budget amounted to only Rs. 54,500 which indicates that the new rules with regard to the Public Works budget are working successfully.

3. In spite of the financial stringency a good deal of useful work was completed during the year, especially on the new Educational and Police buildings at a cost of Rs. 5,53,000 and Rs. 2,16,000, respectively. The expenditure on communications fell from 18½ to 16 lakhs, of which less than 3 lakhs were for new works, and expansion in this direction is essential even under present conditions to cope with the growing needs of a rapidly developing province.

4. A large volume of work has passed through the office of the Sanitary Engineer. It is observed that projects amounting to Rs. 22,38,000 have been prepared in detail by the officers of the Buildings and Roads Branch for local bodies; while rough projects have been prepared or scrutinised, amounting to Rs. 18,99,000. It would be of interest to know at what cost to the local bodies concerned these services have been rendered, and the Chief Engineer might have this cost worked out. The inability of Government to furnish grants-in-aid on the same scale as in former years and the restrictions on borrowing in the open market due to the war have hampered progress on those schemes. Several of these are, however, of vital importance to the localities concerned, and the Lieutenant-Governor trusts that it will be found possible to put those in hand during the coming year.

5. The Lieutenant-Governor is glad to learn that the tube wells which form the source of the new water-supply of Sialkot, opened by him during the year, have more than fulfilled the expectations of the Sanitary Engineer (Mr. Aikman) when he recommended this source of supply for a large town like Sialkot. The advantages of a pure pipe supply have been speedily demonstrated in this case. The town of Sialkot which in the past suffered so frequently from cholera this year escaped the epidemic, though the adjoining villages and cantonment were seriously infected.

6. The opening by the Viceroy in December last of the King Edward Memorial at Lahore forms a landmark of medical progress in the Punjab. The scheme which is now approaching completion will provide buildings for medical education, scientific research and hospital treatment, which, in their design, execution and equipment are worthy of the great sovereign whose memory they perpetuate.

7. The Lieutenant-Governor is pleased to observe that the Consulting Architect (Mr. Sullivan) is finding opportunities for his art in the many new buildings and improvement schemes which are being designed or carried out at Lahore, and that his services are specially useful in the planning of the proposed new Civil Station of Sheikhupura. As the Province develops the demand for architectural advice both in regard to buildings and town-planning will steadily increase.

8. The Lieutenant-Governor is glad to learn that the Simla Municipality is reaping such good financial results from the hydro-electric scheme installed by the Public Works Department.

In electrical matters generally the war has had a particularly restrictive effect, the price of copper and electrical materials generally have increased to an extent which makes schemes unremunerative that otherwise would have shown fair financial prospects.

9. Owing to the war the present year has not marked the commencement of any schemes of importance under the head of Provincial Civil Works, and the work of the Department has been mainly confined to the completion of schemes that were inaugurated before the outbreak of the war, and to the maintenance of works already constructed.

As far as possible a reserve of projects is being built up against the time when the financial situation is normal and the natural development of the Province can be pushed forward. That development has been seriously hindered by the great contraction of Public Works expenditure during the last and the present year; but while financial limitations must still be kept in view, the Lieutenant-Governor considers that they should no longer be pressed to a point which seriously affects the progress of the Province, and he thinks that the financial and other conditions of the Province not only justify but demand a more liberal policy in regard to public works during the coming year.

10. In conclusion the Lieutenant-Governor desires to thank the Chief Engineer for his interesting report, and the officers of the Department for their services during the year.

---

ORDER.—Ordered that copies of the Review be forwarded to all Heads of Departments, Public Works and Civil Officers concerned, other Local Governments and Administrations, and be submitted to the Government of India in the Public Works Department.

Also that the Review be published in the *Punjab Government Gazette*

By order of His Honour the Lieutenant-Governor,

D. W. AIKMAN,

*Secretary to Government, Punjab, P. W. D., Buildings and Roads Branch.*

1508 PGG—639—17-11-16—SGPP Lahore

[illegible] TO PUNJAB [illegible] GOVERNMENT [illegible]

His Honour the Lieutenant-Governor is glad to learn that the working of the [illegible] of the new water-supply works [illegible] period [illegible] more than fulfilled the expectations [illegible] and [illegible] when [illegible] extended this source of supply [illegible] a large [illegible] and [illegible] advantages of a pure [illegible] have been speedily [illegible] public health. The town of [illegible] in the east [illegible] cholera [illegible] year [illegible] the epidemic [illegible] the adjoining villages [illegible] suffered.

[illegible] The opening by His Excellency in December last of the [illegible] at [illegible] forms a landmark of medical progress in the Punjab. [illegible] which is now approaching completion, will provide [illegible] medical education, while the [illegible] hospital [illegible] their design, equipment and [illegible] of the [illegible] complete [illegible].

The Lieutenant-Governor is glad to observe that [illegible] Mr. [illegible] is making [illegible] buildings and improvement schemes [illegible] and [illegible] that [illegible] as are specially useful for the planning of the proposed [illegible] Civil Station [illegible]. As the Province develops, the demand for architectural advice both in regard to [illegible] and town-planning will [illegible] increase.

[illegible] Lieutenant-Governor [illegible] that the [illegible] policy [illegible] of the Public Works Department [illegible].

[illegible] year [illegible] the [illegible] of copper and [illegible] which make [illegible] prospects.

[illegible] the year the [illegible] asked the [illegible] of importance under the head of Provincial Civil [illegible] of the Department [illegible] to the [illegible] that were [illegible] of the year and to the [illegible] of [illegible].

[illegible] possible [illegible] the financial situation is [illegible] and the [illegible] development of the [illegible] forward. That [illegible] has been seriously [illegible] of Public Works expenditure during the [illegible] year; but [illegible] financial [illegible] Government [illegible] that [illegible] the progress of the Province [illegible] that the [illegible] conditions of the Province [illegible] justify [illegible] to public works [illegible] coming year.

In conclusion the Lieutenant-Governor [illegible] for his [illegible] report, and [illegible] for their [illegible] during the year.

---

Ordered that copies of the Review be forwarded to all Heads of Departments, Public Works and Civil Officers [illegible] other Local Governments and Administrations, and be submitted to the Government of India in the Public Works Department.

Also that the Review be published in the Punjab Government Gazette.

By order of His Honour the Lieutenant-Governor.

### REVIEW OF THE ANNUNAL REPORT ON THE OPERATIONS OF THE DEPARTMENT OF AGRICULTURE IN THE PUNJAB FOR THE YEAR ENDING 30TH JUNE 1916.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab, in the Department of Revenue and Agriculture (Agriculture), No. 194, dated the 18th November 1916.*

READ—

Letter No. 491—50-1, dated 12th October 1916, from the Senior Secretary to the Financial Commissioners, Punjab, forwarding, with a note by the Financial Commissioner, the Annual Report on the Operations of the Department of Agriculture in the Punjab for the year ending 30th June 1916.

REMARKS.—A third Assistant Director of Agriculture was added to the superior staff of the Department during the year, and the appointment of an Entomologist, for five years in the first instance, has been sanctioned by the Secretary of State, though the post is not to be filled until financial conditions improve. Meanwhile the Department is unquestionably short-handed, both in the superior and the subordinate staff. Mr. Southern's absence as a prisoner in the hands of the Turks is, His Honour hopes, only temporary, but the valuable practical results that the Department can already point to, have given a marked stimulus to the popular interest in scientific agriculture, and to meet the steadily increasing demands for research and demonstration work, a large expansion of the staff in the near future must be anticipated. Various proposals for increasing the efficiency of the Department are now under the consideration of Government, and the Lieutenant-Governor has already done what is possible under existing financial conditions to provide the necessary funds.

1575 PGG

2. The year was one of satisfactory progress for the Agricultural College, which may now be considered to be well started on the road to success, and the curriculum has been wisely revised in accordance with experience of the past and to meet the needs of the future. The number of new admissions—40—was nearly double that of the previous year, though 16 students subsequently resigned and 2 had to be dismissed. Of the remaining 22 all but 2 passed the first year examination, while the whole of the second year class of 19 students was successful in the leaving certificate examination. The class of students admitted is said to have been superior to that of former years and earned the commendation of the outside examiner. The short vernacular course continues to prove successful, and 31 students were admitted as against 16 in the previous year: if the right type of men continue to be selected, *viz.*, men who come to the class with some practical knowledge of agriculture and return to their lands with the intention of putting into practice something at least of what they have learned at Lyallpur, they should prove very valuable as practical propagandists: the course is well supported by District Boards which now offer 32 scholarships for it besides 3 scholarships for the regular English course. It cannot be expected nor would it be desirable that all diplomates of the College should be provided for within the Department, and, as the Financial Commissioner observes, it is on the creation of a demand for experts by the landowners of the Province that the improvement of agriculture will largely depend. It is therefore encouraging to find that three graduates of the College have this year been employed by private landowners (Europeans) as managers of their estates, and it is hoped that the example which has been set will be followed by Indian landed proprietors.

3. Experiments in the reclamation of saline lands by steam ploughing, mole drains and plentiful washing with canal water have been in progress at Narwala for the last two years. Mr. Barnes has now established that such lands can be reclaimed at a cost of slightly over Rs. 18 an acre apart from the cost of water and of ditching operations, and a committee which met recently at Simla arrived at the conclusion that reclamation on a large scale could be effected at an outside cost of Rs. 50 per acre inclusive of all charges. With ordinary cultivation of the land reclaimed at Narwala Mr. Barnes succeeded in obtaining a yield of wheat averaging over 22 maunds to the acre, though the land was originally the worst on the farm. The Lieutenant-Governor, with the Hon'ble Mr. Hill, had the opportunity of seeing personally the results of this experiment in April last, and he was much impressed not only by its success but by the eagerness of the adjoining *zamindars* that it should be extended to their saline lands. The success of the methods employed has been amply demonstrated, and a project is now being worked out for the reclamation on similiar lines of Government lands in the Lower Bari Doab colony, where it is hoped that very large areas of *kallarathi* land, worth only Rs. 50 per acre and at present unfit for distribution to colonists, can be converted into first class land worth up to Rs. 300 per acre. In other directions also valuable work is being done by the Agricultural Chemist: the investigation of problems connected with the rise of the spring level in the Lower Chenab colony promises to have important results, while experiments with sugar-beet seed have demonstrated the possibility of raising beet with a high percentage of sucrose in Kashmir and even at Lyallpur, and point to the establishment of a beet sugar industry as a possible development. The Lieutenant-Governor is inclined to agree with the Director that there is no reason to think that other crops will oust sugarcane in the North Punjab, and even if the conditions are not suitable for the production of refined sugar—a conclusion which he still hesitates to accept,—the manufacture of gur is not likely to be less profitable in the future than in the past.

4. The work of Mr. Milne, the Economic Botanist, in separating and selecting different types of wheat and cotton continues on the lines which have

2. The year was one of satisfactory progress for the Agricultural College, which may now be considered to be well started on the road to success, and the curriculum has been wisely revised in accordance with experience of the past and to meet the needs of the future. The number of new admissions—40—was nearly double that of the previous year, though 16 students subsequently resigned and 2 had to be dismissed. Of the remaining 22 all but 2 passed the first year examination, while the whole of the second year class of 19 students was successful in the leaving certificate examination. The class of students admitted is said to have been superior to that of former years and earned the commendation of the outside examiner. The short vernacular course continues to prove successful, and 31 students were admitted as against 16 in the previous year: if the right type of men continue to be selected, *viz.*, men who come to the class with some practical knowledge of agriculture and return to their lands with the intention of putting into practice something at least of what they have learned at Lyallpur, they should prove very valuable as practical propagandists: the course is well supported by District Boards which now offer 32 scholarships for it besides 3 scholarships for the regular English course. It cannot be expected nor would it be desirable that all diplomates of the College should be provided for within the Department, and, as the Financial Commissioner observes, it is on the creation of a demand for experts by the landowners of the Province that the improvement of agriculture will largely depend. It is therefore encouraging to find that three graduates of the College have this year been employed by private landowners (Europeans) as managers of their estates, and it is hoped that the example which has been set will be followed by Indian landed proprietors.

3. Experiments in the reclamation of saline lands by steam ploughing, mole drains and plentiful washing with canal water have been in progress at Narwala for the last two years. Mr. Barnes has now established that such lands can be reclaimed at a cost of slightly over Rs. 18 an acre apart from the cost of water and of ditching operations, and a committee which met recently at Simla arrived at the conclusion that reclamation on a large scale could be effected at an outside cost of Rs. 50 per acre inclusive of all charges. With ordinary cultivation of the land reclaimed at Narwala Mr. Barnes succeeded in obtaining a yield of wheat averaging over 22 maunds to the acre, though the land was originally the worst on the farm. The Lieutenant-Governor, with the Hon'ble Mr. Hill, had the opportunity of seeing personally the results of this experiment in April last, and he was much impressed not only by its success but by the eagerness of the adjoining *zamindars* that it should be extended to their saline lands. The success of the methods employed has been amply demonstrated, and a project is now being worked out for the reclamation on similiar lines of Government lands in the Lower Bari Doab colony, where it is hoped that very large areas of *kallarathi* land, worth only Rs. 50 per acre and at present unfit for distribution to colonists, can be converted into first class land worth up to Rs. 300 per acre. In other directions also valuable work is being done by the Agricultural Chemist: the investigation of problems connected with the rise of the spring level in the Lower Chenab colony promises to have important results, while experiments with sugar-beet seed have demonstrated the possibility of raising beet with a high percentage of sucrose in Kashmir and even at Lyallpur, and point to the establishment of a beet sugar industry as a possible development. The Lieutenant-Governor is inclined to agree with the Director that there is no reason to think that other crops will oust sugarcane in the North Punjab, and even if the conditions are not suitable for the production of refined sugar—a conclusion which he still hesitates to accept,—the manufacture of gur is not likely to be less profitable in the future than in the past.

4. The work of Mr. Milne, the Economic Botanist, in separating and selecting different types of wheat and cotton continues on the lines which have

been so successful in the past: in addition the isolation of types of barley and gram has been commenced. Barley in particular merits careful attention, as there is reason to anticipate a considerable demand for this grain for export for malting purposes. The varietal tests conducted by the Professor of Agriculture at Lyallpur and by the Deputy Director at Gurdaspur have served chiefly to confirm previous conclusions as to the most suitable varieties of wheat and cotton, conclusions which are endorsed by the ever-growing popularity of 4-F American cotton and of Punjab 11 and Pusa 12 wheat. The progress made with this acclimatised cotton is indeed astonishing, and in the present year it is estimated that an area of 50,000 acres has been sown with it as compared with 7,700 acres in 1915. As this cotton sells at a premium of from Rs. 2-8-0 to Rs. 4 per maund over country cotton, the additional profits reaped by cultivators are very considerable. Similarly, the area of wheat grown from the Department's selected seed rose from about 8,500 acres to nearly 30,000 acres. The propagation of these varieties of wheat and cotton—the superiority of which is now generally recognised—all over the Province is only limited by the difficulties in providing pure seed in sufficient quantities to meet the demand and expert establishment to advise the cultivators, and Government will be glad to provide all reasonable assistance to the Department in furtherance of those objects. The sphere of the Department's activities in this educative work is gradually widening, and two new districts, Rohtak and Amritsar, are now being worked. The need for enlarging the staff to cope with this increase of work is fully recognised by Government, and seven extra *muqaddams* were sanctioned during the year for district demonstration, while an addition of four to the cadre of Agricultural Assistants has also recently been agreed to. The hydraulic experiments instituted by the Professor of Agriculture on the lines suggested by the Imperial Botanist are as yet only in their infancy, but the results already attained are sufficient to show how valuable the investigation may prove in demonstrating that the finest yields of wheat can be secured by careful cultivation with the minimum of irrigation. The trial of Scotch potatoes in the Simla Hills has proved an unqualified success, and affords one more proof of the direct material benefits conferred on cultivators by the efforts of the Department.

5. The attention of the Agricultural Engineer has again been devoted chiefly to well-boring operations, and both the amount of work accomplished and the percentage of success obtained mark an improvement on the previous year. Three tube-well installations worked by mechanical power have been completed and a large number of estimates for similar installations have been prepared for private individuals. Mr. Brownlie is also doing useful work in designing improved agricultural implements of a simple and inexpensive type to take the place of the primitive tools in ordinary use.

6. The work of the Department in spreading through the Province a knowledge of the results obtained by the investigations of its experts, in demonstrating the value of improved methods and instruments of agriculture and popularizing the use of selected seed is rightly regarded by the Director as of paramount importance. In this work valuable assistance can be rendered by the district agricultural associations of which two more were formed during the year in Shahpur and Hissar. Of even more value are the demonstration farms started by the Sialkot and Amritsar District Boards from which the Director anticipates most satisfactory results. A similar farm is contemplated by the Gujrat District Board, and the example is one which His Honour hopes will be followed by many other boards. Reference has already been made to the success which has been obtained with selected wheat and cotton seed: equally encouraging is the very considerable increase in the sales of improved instruments in a year when prices were high. In this connection His Honour is pleased to note the use which is being made of co-operative banks as sub-agents of the firm which supplies Meston ploughs and the assistance which is being given by them in the distribution of selected seed.

7. His Honour learns with satisfaction of the cordial co-operation of the Irrigation Department in the *reh* reclamation experiments to which reference has been made above, in the distribution of selected seed in the Lower Bari Doab colony and in the very interesting and important water-saving experiments that are being conducted in Lyallpur, Montgomery and Sargodha. Orders have been issued for the reservation of at least two posts of Canal Zilladar every year for graduates of the Agricultural College.

8. In spite of the war and of the restrictions which it has been necessary to place upon new expenditure, the year has been one of real progress upon which His Honour desires to congratulate all the officers of the Department. It is now in close touch with the leading agriculturists of the Canal colonies and of the central districts, and finds much scope for its activities in the development of the large areas allotted recently on the Lower Bari Doab Canal for agricultural objects, dairy farming, cattle-breeding, &c. Its further expansion in all districts of the Province is only a question of time, and should be steadily promoted through the agency of the Department assisted by local agricultural societies and District Boards. The acknowledgments of Government are due to Mr. Townsend for the steady progress achieved and for the tact and zeal with which he has supervised the Department during the year. The Lieutenant-Governor also desires to put on record his appreciation of the valuable work—both scientific and practical—done by Messrs. Barnes, Roberts and Milne in their respective branches.

---

ORDER.—Ordered that a copy of these remarks be forwarded to the Senior Secretary to the Financial Commissioners, Punjab, for the information of the Financial Commissioners, that they be published in the *Punjab Gazette* and submitted with copies of the report to the Government of India in the Department of Revenue and Agriculture.

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Revenue Secretary to Government, Punjab.*

1575 PGG—939—24-11-16—SGPP Lahore.

been so successful in the past: in addition the isolation of types of barley and gram has been commenced. Barley in particular merits careful attention, as there is reason to anticipate a considerable demand for this grain for export for malting purposes. The varietal tests conducted by the Professor of Agriculture at Lyallpur and by the Deputy Director at Gurdaspur have served chiefly to confirm previous conclusions as to the most suitable varieties of wheat and cotton, conclusions which are endorsed by the ever-growing popularity of 4-F American cotton and of Punjab 11 and Pusa 12 wheat. In spite of the war and of the restrictions which it has been necessary to place upon new expenditure, the year has been one of real progress upon which His Honour desires to congratulate all the officers of the Department. It is now in close touch with the leading agriculturists of the Canal colonies and of the central districts, and finds much scope for its activities in the development of the large areas allotted recently on the Lower Bari Doab Canal for agricultural objects, dairy farming, cattle-breeding, &c. Its further expansion in all districts of the Province is only a question of time, and should be steadily promoted through the agency of the Department assisted by local agricultural societies and District Boards. The acknowledgments of Government are due to Mr. Townsend for the steady progress achieved and for the tact and zeal with which he has supervised the Department during the year. The Lieutenant-Governor also desires to put on record his appreciation of the valuable work—both scientific and practical—done by Messrs. Barnes, Roberts and Milne in their respective branches.

---

ORDER.—Ordered that a copy of these remarks be forwarded to the Senior Secretary to the Financial Commissioners, Punjab, for the information of the Financial Commissioners, that they be published in the *Punjab Gazette* and submitted with copies of the report to the Government of India in the Department of Revenue and Agriculture.

By order of His Honour the Lieutenant-Governor of the Punjab,

H. D. CRAIK,

*Revenue Secretary to Government, Punjab.*

## PART II.

## GENERAL.

### REVIEW OF THE DISTRICT REPORTS ON THE ADMINISTRATION AND ACCOUNTS OF THE DISTRICT BOARDS IN THE PUNJAB FOR THE YEAR 1915-16.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Boards and Committees (Boards) Department, No. 324, dated 11th December 1916.*

READ—

The district reports on the administration and accounts of the district boards in the Punjab for the year 1915-16.

REMARKS.—

PART I.

The general constitution of the district boards remained unchanged during the year.

Government has on more than one recent occasion expressed its willingness to extend the elective system to the 11 districts of the West Punjab where it is not at present in force, if there is a general desire for it and conditions are suitable. The necessary enquiries are now being carried out, but the figures with regard to elections held during the past year are not encouraging. Only 14 vacancies out of a total of 133 were contested, and from several districts it is reported that candidates were secured with difficulty and only on official pressure being brought to bear. In three cases the vacancies had to be filled by nomination owing to a want of candidates, and nearly 10 per cent. of

1752 PGG

the seats open to election are now filled by members so nominated. A similar apathy was commented on in reviewing the previous year's reports, and the fact must be faced that the rural population have been slow to appreciate and assimilate the election system, which is still foreign to their ideas and traditions. The result is that once a member has secured a seat by election, which in practice means either by popular acclamation or by acquiescence, he is in nine cases out of ten, if he so desires, re-elected without opposition on the expiry of his term.

2. The Kangra district board met only 4 times and 8 other boards held only 5 meetings. On the other hand, the Sialkot and Mianwali boards met 12 times, and all other boards 6 or more times. Attendance on the whole improved. Karnal was best with the very high average of 89 per cent., while Jhelum and Dera Ghazi Khan were worst with only 52 per cent. each. The attendance of non-official members increased by 10 per cent. or more in Karnal, Ambala, Gujranwala, Gujrat, Shahpur and Muzaffargarh : in Jhelum, Montgomery and Dera Ghazi Khan it was only 50 per cent. or less, and efforts should be made to improve it. Meetings were held elsewhere than at headquarters in Ferozepore, Lahore and Gujranwala, and these examples might well be copied by other districts where conditions are suitable.

3. The general working of the boards is characterised as satisfactory in almost identical words in practically every district report. As an estimate of the progress which is being made in local self-government, this description is not very helpful, and many of the reports are entirely silent as to the manner in which this satisfactory working has revealed itself, and the curt "no remarks" under this heading in the Ambala report conveys almost as much information as the time-honoured description furnished in most other cases. In Amritsar this trite encomium is qualified by an expression of the Deputy Commissioner's opinion that "viewed as a consultative or executive body the district board is absolutely useless" : in Lahore "members have shown a *tendency* to interest themselves more in their duties" : in Gurdaspur "they *appear* to evince" such an interest : in Ferozepore "there has been some improvement in the interest shown by them in the work of the board" : in Kangra the enthusiasm of members is chiefly aroused by questions with regard to appointments, and "frequently results in undignified partisanship" : in Gujranwala "personal feelings are much in evidence," and "the lively interest shown by members in matters coming before the board is based much more on personal than on public grounds" : in Jhelum "few members take much interest in the district board work from the public point of view." Such remarks are not encouraging, but fortunately there is another side to the picture which reveals the steady development that is in progress in some districts and affords re-assuring proof of a growing spirit of public service and an intelligent appreciation of the duties of district representatives. The Commissioner of Rawalpindi writes : "All Deputy Commissioners are united in their appreciation of the working of the boards and of the intelligent interest taken in public affairs by the members. Many of them pay a tribute to the good work done by sub-committees. Everything in fact points to the conclusion that the district board machinery is now very fairly efficient and that it would be sound policy if Government could make development grants on a more generous scale." Government recognises that in at least four of the boards of the Rawalpindi Divis[illegible] the difficulty is mainly one of finance, and, as explained in the following paragraph, steps have been taken during the year to put the financial position of the boards in the Rawalpindi Division on a secure basis and to extend that system to other divisions. The stimulus which a strong financial position supplies to intelligent and efficient administration is illustrated by the working of the Lyallpur board : quite apart from the fine record of works completed during the year which was made possible by the ample resources of this board, there is a spirit of intelligent initiative

in the members, who, as the Commissioner remarks, are successfully learning to undertake the burden of responsibility in public affairs. The disposal of routine business at general meetings is greatly facilitated by the recommendations of the Financial sub-committee : the Education sub-committees exercise a real and healthy control over village schools, and make possible the execution of annual repairs to such schools under the supervision of the teachers—a system which the board has found both expeditious and economical. Two members were entrusted with the supervision of the construction of primary schools and secured the completion of nearly 30 new buildings at a very moderate cost. A thorough review of the finances of the board has been undertaken, and a programme of expenditure for five years has been drawn up, with a view to making adequate provision for all services in due proportion, and thus enabling each department to carry out its programme methodically. Progress is not, however, confined to Lyallpur, and steps are being taken in other districts to utilise more and more the services of members for purposes of supervision and even for the discharge of executive duties. In a considerable number of districts members are now entrusted with the supervision of works in progress in their circles and the attestation of completion reports, and in several districts the actual execution of petty works is committed to the charge of individual members. In Gurgaon a regular programme of the duties which members are expected to discharge has been drawn up, and in the present stage of development this should prove a useful measure ; for the general conclusion to which most of the reports point is that interest in the general administration of the board is greatly stimulated by the responsibility attaching to the discharge of definite duties assigned to members. At the same time care should be taken that members and sub-committees are not entrusted with matters for which they are not suited, and it is open to question, for example, whether the action of the Gujrat board in making over to tahsil sub-committees the preparation of working plans for arboriculture was well advised.

4. While, however, much advantage may be derived from the policy of decentralization which divides the duties of a board among sub-committees and individual members, it is at the same time necessary that the primary duties of the board in framing the general policy to be followed in the provision of facilities for education, medical relief, communications, etc., and controlling the measures taken to put that policy into practice should not be lost sight of. The revision of the financial relations between Government and district boards, which is now in progress and has actually been introduced in the Rawalpindi Division, provides a most suitable opportunity for a thorough review by boards of their financial position with a view to an intelligent distribution of their resources among the many objects for which provision has to be made. The amount of assistance from Government, apart from educational grants, upon which the boards can normally rely will now be definitely known, and boards will have the fullest discretion in apportioning these funds to the various departments of their work ; but if the best use is to be made of their resources, a carefully considered programme of expenditure will be essential. The Government grants are being calculated so as to allow due provision for the maintenance of all existing services and a reasonable amount of development, but many boards will no doubt find it necessary to supplement their existing resources if the development of communications and of facilities for education, medical relief and other amenities is to keep pace with the ever-growing demands. The Lieutenant-Governor has more than once pointed out that the extension of local self-government must involve increased expenditure on local objects and that the willingness of the people to assume extra financial responsibilities is the most effective test of their desire for such extension. France and Italy are the two European countries in which rural self-government on the Indian model are most

..ighly developed. In France the district and rural boards raise an annual revenue of £60,000,000 by rural taxation. Italy—a much poorer country—has a population (40 millions) and a land revenue (4 millions) twice that of the Punjab. But the district and rural boards raise by local taxation £7,000,000 or nearly double the land tax. In the Punjab any proposal to increase the resources of the boards by taxation is however stoutly resisted and the local rate is usually only one-tenth of the land revenue demand. The maximum local rate (1⅔rds annas per rupee of land revenue) has so far been imposed in only 11 districts, and its increase in other districts is one of the first questions to which attention should be paid. The total incidence of local taxation per head was only 3¾ annas in the Punjab as compared with 42 annas in Italy and even allowing for the greater wealth of Italy, the Punjab figure appears ridiculously inadequate.

5. The registration of Muhammadan marriages which was started in Ambala last year has proved successful, and the scheme is already self-supporting. In Lahore the system has been extended to the Lahore as well as the Kasur Tahsil. As some boards do not seem to be aware that the system has a legal basis, it may be pointed out that the registration of births and deaths and *marriages* is a matter which under section 20 of the District Boards Act Government can entrust to the control and administration of a district board. The registration of births and deaths is already provided for by a separate machinery but in the case of marriages the Government will gladly empower the District Boards to assume control.

## PART II.—ACCOUNTS.

6. The gross income of district boards, Rs. 74½ lakhs, was nearly Rs. 7½ lakhs less than in the previous year, owing almost entirely to the curtailment of Government grants for roads, which were less by Rs. 8,68,119, though Government contributions for educational and medical purposes amounted to Rs. 1,12,894 more than in 1914-15. At the same time the income was more than double the average, Rs. 34 lakhs, of the period 1902-03—1905-06 owing partly to or increase in local rate (Rs. 11 lakhs) and school fees (Rs. 2 lakhs) but mainly to more liberal contributions from Government. Altogether Government grants during the past year aggregated Rs. 24,89,932 as against Rs. 32,50,606, and other contributions also fell off by nearly Rs. 80,000. The income from tolls and ferries, from both sale and rent of buildings and land, sale-proceeds of trees and grass and of stores and materials, fairs other than horse and cattle fairs, garden receipts, and from fees in training and special schools was less by Rs. 1,16,364 ; but these losses were more than counterbalanced by the increases from local rate, stage carriages fees, receipts under the Cattle Trespass Act, fees from secondary schools, cattle fairs, canal receipts and miscellaneous, which produced Rs. 2,28,577 more than in the previous year. On the other hand, expenditure rose by about Rs. 11½ lakhs to Rs. 86,30,765, the increase being general under nearly every head.

7. Under the head "Education" the income was Rs. 1,02,275 better than in the previous year, mainly owing to the larger Government grants. There was, however, also some increase in the amount of fees received in secondary schools, and the income so realised amounted to over 13 per cent. of the total expenditure, excluding expenditure on buildings. This compares favourably with the proportion of fees to total expenditure in other provinces, which in the year 1914-15 was 13·6 per cent. in Madras, 11·4 in the United Provinces, 5·1 in Bombay, 2·3 in Bihar and Orissa, and 1·8 in Bengal. In Sialkot fees amounted to over Rs. 40,000, nearly double the highest total in any other district, the percentage of total expenditure being 24·4. The next best percentages were in Montgomery, 23·3, and Shahpur, 22·6. The gross

expenditure rose by over Rs. $2\frac{1}{4}$ lakhs to Rs. 23,14,740 apart from the cost of new buildings which is not shown separately in the accounts, but appears from the Education Report to have amounted to nearly Rs. 5 lakhs. About 80 new primary school buildings, 5 middle school buildings and 7 boarding-houses were completed. A very cheering evidence of the increasing desire of the rural population for greater educational facilities is the fact that in a number of districts the boards were assisted in providing suitable school buildings by the co-operation of the people themselves. In Ferozepore, where all the schools are said to be now properly housed, the average cost of a primary school is Rs. 1,000, and of this Rs. 500 is in every case obtained by private subscriptions. In Dera Ghazi Khan, too, the people helped in providing buildings and sites and subscribing towards the cost of construction and of furniture. The Lyallpur board has started a workshop to turn out school furniture at an economical rate, and His Honour would commend this example to other boards which are making a considerable increase in the number of schools. Improved scales of salaries were introduced in several districts, and generally the attention devoted to education was very satisfactory. In Gujrat so much as 44 per cent. of the total expenditure of the board was incurred on education and in Jullundur the percentage was 40: indeed the question suggests itself whether in those districts other services such as medical relief, sanitation and roads received due attention and adequate grants. In nine other districts the percentage was over 30, and only in three—Hissar, Karnal and Multan—was it under 20, *primâ facie* an inadequate proportion in districts which are educationally backward. A useful step taken in Ludhiana was the appointment of an Inspectress of Girls' Schools for the district. Technical schools were opened in Montgomery and Gujranwala, and the industrial schools at Kasur and Karnal are reported to be gaining in popularity.

8. Receipts under the head "Medical" rose by Rs. 8,650 owing to increased Government contributions. "Other contributions" were less by nearly Rs. 9,000, but this was due to the failure to obtain the credit of certain contributions due from municipalities in the Rohtak District before the end of the year. Income from fees and from sale of medicines remained stationary at about 10 per cent. of the total income, and represented but a very insignificant fraction of the expenditure which increased by about Rs. 81,000 to nearly Rs 8 lakhs. The increase in expenditure was general under nearly every head, but was greatest on account of plague charges which rose by over Rs. 30,000. The Karnal board spent both actually and relatively more than any other board on medical relief—17 per cent. of its total expenditure—as against a general average of only 9 per cent., but the adequate maintenances of its splendidly equipped hospital justifies liberal expenditure. The minimum expenditure on medical objects which was formerly prescribed by rule was $18\frac{3}{4}$ per cent. of a board's income, and though His Honour recognises the many other pressing calls on the resources of the boards, he desires again to call attention to the inadequate provision which is made by many of them for this all-important service. In reviewing the annual statements of dispensaries for the last calendar year he drew attention to the fact that in many districts with exceedingly high death rates each dispensary has to serve 70 or 80 thousand persons—a state of affairs which calls for early remedy, and is now under enquiry by the Inspector-General of Civil Hospitals in consultation with the boards. Most boards have now accepted the principle that fees should be charged to those able to afford to pay them, but the figures show that the practice lags very far behind the theory, and His Honour would suggest that steps be taken to furnish the medical officer in charge of each dispensary with a list of persons who should be charged for attendance and medicines. Greater advantage might also be taken of canal dispensaries. The figures quoted in the Gujranwala report show what good use can be made of these dispensaries, and His Honour is glad to see that the Sialkot board has taken up the matter. New dispensaries were completed at Kangra, Tandlianwala (Lyallpur) and Sillanwali (Shahpur), and additions and

alterations were made to many others. The class for *dais* at Ferozepore, which was noticed in last year's review has not as yet attained much success in spite of the very favourable terms on which women are received. Four stipends of Rs. 10 per mensem each were voted by the Lyallpur board for candidates to be trained in midwifery and nursing at the Medical School for Women at Ludhiana ; two stipends of Rs. 12 per mensem each were sanctioned by the Karnal board ; and the district board of Gujranwala is also offering a scholarship of Rs. 20 per mensem at the same institution for a female student to study in the Sub-Assistant Surgeon class.

9. A sphere of usefulnes for which the boards are peculiarly fitted is the improvement of agriculture and of the breeding of horses, cattle and sheep. And the Lieutenant-Governor is glad to notice the steady advance that is being made in those directions.

The encouragment of more scientific methods of agriculture and the use of selected seed, the value of which have now been amply demonstrated by the Agricultural Department, are matters in regard to which much assistance can be given by district boards. Several have already sanctioned scholarships for the vernacular course at the Lyallpur College, and the Sialkot and Amritsar boards now possess demonstration farms. The Sialkot farm has recently been put under the charge of an Agricultural Assistant. A similar farm is projected by the Gujrat board, and His Honour hopes to see many other boards co-operating with the Agricultural Department in this way, as under expert management such farms should be a source of profit to the boards, besides fulfilling their primary purpose as object lessons of scientific methods. Visits of selected members of district boards to the Government Agricultural Farms should be encouraged as a means of spreading a knowledge of recent developments in agricultural practice, and Government has ruled that the rail fares for such journeys are a legitimate charge on the boards.

Interest in cattle-breeding was well maintained during the year and the record number of 181 bulls was purchased by boards from the Hissar Farm and 19 bulls of other breeds through the Civil Veterinary Department. The system of selling bulls at half price to selected applicants was adopted with excellent results in Hissar, where 18 bulls were thus disposed of : in Lahore and Gujranwala the numbers were 13 and 15, respectively. Attempts are said to have been made to introduce the system in other districts, but no adequate explanation is afforded of the want of success. New cattle-breeding sub-committees were formed in Gujrat and Montgomery, and the existing sub-committees in other districts are said to be doing good work. New cattle fairs were started at Rohtak and Montgomery which promise to be successful, and the income from horse and cattle fairs was about Rs. 30,000 better than in the previous year, a total expenditure of Rs. 63,341 bringing in a return of Rs. 1,39,686 gross. Properly managed, such fairs should always prove remunerative, and the Commissioner of Lahore rightly calls attention to the loss incurred over those in Gujranwala.

In reviewing the report on the work of the Civil Veterinary Department, His Honour was pleased to observe the growing appreciation of the department's work among the people. Particularly satisfactory is the progress that is being made as a result of the efforts of the department in the campaign against uncontrolled breeding with bulls and stallions of poor quality, and in this Multan, where over 10,000 castrations were performed during the year, has taken the lead. This policy can, however, only be successful if an adequate supply of bulls and stallions of good breed is provided. In this respect the boards are doing all that could be expected of them with regard to bulls, but in respect of stallions little is being effected beyond the replacement of casualties.

Interest in sheep and goat breeding is gradually spreading, and 12 cross-bred merino rams were purchased by the Gujranwala board, 10 by the Kangra board, and 5 by the Sialkot board. In addition, the Hissar board has 12 rams and 14 goats and private individuals in various districts purchased 38 rams from the Government farm.

A new veterinary dispensary was completed at Jaranwala (Lyallpur), and additions were made to several others.

10. Cattle-pound charges amounted to Rs. 48,137 and receipts to Rs. 1,18,614. The pounds thus proved a direct source of profit to the boards quite apart from the resulting protection of crops from damage. In districts like Karnal, Ferozepare and Gurdaspur, where pounds are managed in a business-like way, a net income of from 7 to 9 thousand rupees is obtained, but in some other districts, notably Lahore, Mianwali and Jullundur, the boards appear to have entirely neglected their duties in this respect and the pounds are worked at a loss.

11. There was a falling-off of nearly Rs. 10 lakhs in the receipts under the head "Civil Works," chiefly owing to the curtailment of Government grants, which accounted for over 8½ lakhs of the decrease. The generous grants, however, which had been distributed towards the close of the previous year, and in many cases large accumulated balances enabled the boards to carry out a very satisfactory programme of works, and expenditure rose by about Rs. 11 lakhs. About Rs. 23½ lakhs were spent on communications and Rs. 11¼ lakhs on buildings. Establishment charges and contingencies amounted to only 3·7 per cent. of the cost of the works executed, and though this is satisfactory in itself, it is a question whether greater expenditure on establishment would not produce better results and be more economical in the end.

12. Arboricultural operations were hampered by the failure of the monsoon, and in many districts little progress was made with planting. In Lyallpur, Montgomery, Sialkot and Gujranwala, however, from 17 to 20 miles of avenues were planted up successfully. Receipts decreased by about Rs. 8,000 and expenditure rose by over Rs. 16,000, and it is still only too apparent that ignorance and lack of proper supervision are responsible for the unsatisfactory state of affairs. Only two boards—Sialkot and Rohtak—are reported as having adopted the sane principles of planting and rotational fellings advocated in Messrs. Casson and Mustoe's "Notes on Roadside Arboriculture." This work has now been translated into Urdu, and the Lieutenant-Governor trusts that it will be carefully studied by all boards, and that the scientific and business-like methods described in it will be substituted for the present unsound practice and lack of method.

13. There is little to note with regard to the progress of rural sanitation. A few small works in connection with the drainage or water-supply of large villages were undertaken, and a tax was imposed on the residents of Dijkot in the Lyallpur District to pay for a staff of sweepers and for other expenses in connection with the sanitation and lighting of the village. The district board of Gurgaon has drawn up a set of simple rules which are now under consideration to regulate the collection of manure in villages and to ensure the purity of the water-supply, for adoption in villages which agree to them; and the Sialkot board is contemplating the imposition of a sanitation tax in Kotli Loharan. Such a tax is now in force in a considerable number of villages in various districts, but the reports are silent as to the efficacy of the measures which have been rendered possible by this self-imposed taxation in promoting the sanitary improvement of the villages concerned, and His Honour would be glad if the subject were mentioned in future reports. A Bill has now been drafted and circulated for opinion which is intended to provide a simple machinery of self-government suitable to small towns and the larger villages, but for

smaller villages His Honour has decided that the imposition of taxation and the passing of simple regulations under the District Boards Act will meet existing requirements. At present only a few districts have shown any inclination to adopt such regulations, and the Sanitary Board has intimated to them that it is prepared to assist in financing suitable schemes of sanitation, provided that a portion of the cost is forthcoming from local sources.

14. No board allowed its balance to fall below the minimum; but in a number of cases the year closed with dangerously low balances, and the Lyallpur was forced to overdraw in order to meet establishment and other recurring charges payable in the early months of the current financial year. The responsibility for this state of affairs is laid upon Government in the district report, for prescribing an inadequate minimum balance, but the board has not realised that the minimum balance prescribed by Government is intended as a reserve fund to meet emergencies, and a board which closes the year with the bare minimum balance not only shows a want of ordinary foresight but must almost inevitably be compelled to entrench upon that balance in order to meet recurring charges at the beginning of the year and thus infringe the rules of Government. The extensive programmes of works completed during the year have naturally reduced the unduly high balances which had been accumulated by many boards, but in Multan (Rs. 3,79,822) nearly a lakh was added to an already high balance, and Gujranwala (Rs 3,35,269), Ferozepore (Rs. 2,94,445) and Hissar (Rs. 2,50,916) have still large sums with which to supplement their annual revenues.

An interesting report on the work of the Local Funds Audit Department was recently submitted by the Examiner, Local Funds Accounts, and His Honour is glad to observe that the Examiner considers that district board accounts are on the whole well kept.

15. The Lieutenant-Governor notes that in spite of the remark in last year's review as to the meagreness of some of the district reports no improvement has been effected in the case of Amritsar, and the Jhelum, Hoshiarpur and Muzaffargarh reports are equally inadequate.

---

ORDER.—Ordered that copies of the foregoing remarks be forwarded to all Commissioners of Divisions and Deputy Commissioners of Districts in the Punjab, the Accountant-General, Punjab, and the Secretary to Government, Punjab, Public Works Department, Buildings and Roads Branch, and be submitted to the Government of India in the Education Department.

Ordered, also, that the remarks and a translation of them be published in the *Punjab Gazette*, English and Urdu versions, respectively, and that copies of the Urdu translation be supplied to Deputy Commissioners for the information of district and local boards.

By order of His Honour the Lieutenant-Governor of the Punjab

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

### REVIEW OF THE REPORT OF THE DIRECTOR OF PUBLIC INSTRUCTION, PUNJAB, FOR THE YEAR ENDING THE 31ST MARCH 1916.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab, in the Home (General) Department, No. 674-Genl.-1, dated the 18th December* 1916.

READ—

The report of the Director of Public Instruction, Punjab, for the year ending the 31st March 1916.

REMARKS.—The all-round progress of education in this Province has been the contant theme of successive reports and reviews for years past, and, in spite of the limitations on expenditure imposed by the war, has been well maintained in the present year. Developments are noticeable in every direction: the total expenditure has risen by nearly 5 lakhs, the attendance of pupils by over 16,000, and the number of educational institutions by 285. The percentage of the population of school-going age, which is actually being educated, has now reached 24·4 in the case of males and 5·21 in that of females. Ten years ago the corresponding figures were 15 and 2·3 per cent. Among other features of the year's progress are the continued replacement of untrained by trained teachers, a marked advance in the attendance at girls' schools, and a large increase in the contributions from private sources. But while this continuous

1802 PGG

progress even in a year marked by the three scourges of war, pestilence and severe scarcity is a matter for congratulation, it must not blind us to the other side of the picture which shows that only one boy in four and one girl in nineteen are under instruction, that the great majority of those receiving instruction do not go beyond the lower primary stage, that the diffusion of education among different communities and districts is still very unequal, and that though the desire for it is steadily spreading among the middle class population in town and country—including the fairly well-to-do agriculturists—the general attitude of the ordinary peasant and of the artisan and menial classes towards education is still one of indifference or of passive resistance which cannot be easily or speedily overcome.

2. An increase, which amounted to over 3 lakhs, in private contributions, together with a rise of over $1\frac{1}{2}$ lakhs in fees, mainly accounted for the increase of nearly 5 lakhs in expenditure. The necessities of the times were responsible for a falling-off of just under $5\frac{1}{2}$ lakhs in Imperial contributions, but this loss was made up for by a rise of over 4 lakhs in the expenditure from district funds proper, and by increases in the expenditure from Provincial and municipal funds. It is satisfactory to find that there is no ground for the suggestion referred to in last year's review, that local bodies had taken advantage of the liberal grants by Government to reduce their own expenditure on education. Of a total expenditure of 112 lakhs about 50 lakhs were provided by Government directly or through grants to local bodies, 21 lakhs by local bodies from their own resources, over 25 lakhs from fees and over 15 lakhs from private sources.

3. The report contains a number of adverse, but not very convincing, criticisms on the new system of fixed grants *per* school to boards for vernacular education. This scheme was tentatively introduced in view of the uncertainty of Imperial contributions in these times of stress. Under the old system it was impossible to ascertain the extent of the Provincial liability until after the close of the financial year. The object of the recent modifications was to enable an accurate forecast to be made at the time of the preparation of the budget. But if further experience shows that they are prejudicial to the interests of education, the question will be reconsidered. The figures above quoted make it clear that Government even in a year of financial stringency did not fail to fulfil its obligations and is not likely to do so in the future. In fact two-thirds of the cost of primary education is defrayed by Government.

4. The educational administration of district boards is generally commended, and that of the district board of Ferozepore has been remarkably successful. Montgomery is among the districts where there was a decline in expenditure. The income of the district board will expand rapidly in the near future, and the local authorities should see to it that timely provision is made for the educational requirements of the new colonists. The colony will contain large numbers of *ex*-soldiers, and the Lieutenant-Governor thinks it not unlikely that their experiences abroad will have opened their eyes to the advantages of education.

It would appear from the report that municipalities are on the whole less efficient than district boards in promoting education. In the Ambála Division especially many of them have shown a lack of method and foresight that suggests the need for more active direction on the part of the local authorities.

5. The number of students in the Arts Colleges rose by 379 to 3,893. The increase at the Khalsa and Islamia Colleges was very remarkable, and the Lieutenant-Governor is glad to see the increasing success of these institutions in spreading higher education among the Sikh and Muhammadan communities which are still backward in this respect and have much ground to make up. He also hopes that the newly opened Sanatan Dharm College in Lahore will stimulate sound educational progress in the orthodox Hindu com-

munity and also help to relieve the undoubted congestion in the older colleges. Consideration of the scheme for a second Government College away from Lahore has had to be postponed owing to the war, but the scheme will not be lost sight of. The examination results were on the whole better than those of last year, and His Honour congratulates the Government College on signalizing its entry on its second half-century of existence by obtaining six "Firsts" in the M. Sc. examination.

The system of special University lectures was continued with success and the University Library was re-arranged by an expert from America. The employment of these special lecturers costs the University a good deal, and it is important that full advantage should be taken of their visits. It is not only the students attending their lectures who should derive benefit from their teaching. The object in view is a gradual raising of the standard of instruction in colleges throughout the Province, and to this end it is very desirable that all engaged in teaching the subjects dealt with by the special lecturers should take every opportunity of studying their methods and profiting by their example and their advice.

6. It is in the sphere of secondary education that the educational enthusiasm of local bodies and private agencies is principally displayed, and the increases in expenditure from private sources and district board funds have already been alluded to. The number of pupils and recognized institutions has again increased, the former by 4,662 and the latter by 25, and the proportion of trained teachers continues to rise. The large part played by communal rivalry in secondary education is an instructive feature of the report, and His Honour commends to those concerned in the foundation or management of denominational schools the remarks of the Inspector of the Jullundur Division quoted in paragraph 30 of the report which go to show that misguided enthusiasm may and does injure the cause of true education.

Sardar Sahib Hari Singh, the Multán Inspector, contrasts the results of the vernacular final examination and the University Matriculation examination, and observes that "other things being equal, teaching and examination through a student's vernacular will always produce results which the medium of a foreign tongue can never approach." His Honour believes that these views are shared by other members of the Department, and from a long practical experience of men trained in both systems the conclusion he personally has arrived at is that while a thorough knowledge of English broadens a man's views and increases his efficiency, a man with an incomplete knowledge of English who attempts to reason and work thorough that medium is usually less clear in his reasoning and less efficient in his work than the man who thinks and works through his mother tongue only, but knows that well. The first deduction from this argument is that a thorough knowledge of the vernacular provides a better mental equipment than an indifferent knowledge of the vernacular supplemented by a smattering of English. If that deduction is correct, it raises issues which carry us down to the very foundations of our system of education. They are issues which every thoughtful man can formulate for himself, and though the past may have to some extent prejudged them, their final decision will rest with the future.

The new system of medical inspection of secondary schools was introduced in October, and should in time produce results of great value.

In paragraph 31 of the report the Director gives instances of the interest taken by teachers and scholars in the war. He shows that in the Rawalpindi Division alone 868 teachers and *ex*-students of secondary schools besides 1,682 *ex*-pupils of primary schools have enlisted in the army, and the Lieutenant-Governor is glad to notice this confirmation of the opinion he expressed in last year's review. In the course of his tours he has seen some scores of schools of all grades and was very favourably impressed by the spirit

of loyalty and the keen desire for the success of our cause which animated them all. A noticeable evidence of this spirit is the many contributions from schools to the various funds connected with the war.

7. The number of primary schools has increased during the year by 206, the number of pupils by 6,288, and the expenditure by a lakh and a half, but though the proportion of trained teachers has risen and now amounts to two-thirds of the total number, the number of teachers is still inadequate. The improvement in the pay and status of the teachers is a very satisfactory feature and the Lieutenant-Governor sees no sufficient reason for the apprehension that the change referred to in paragraph 3 above will deter the local bodies from proceeding with a progressive programme.

The Jullundur Inspector has some interesting remarks on the efforts made to adapt rural education to the demands of agriculture. Success under the conditions, he describes, is difficult of attainment, but the experiment is an important one, and the Lieutenant-Governor hopes that the inspecting staff will do all in their power to see that it has a fair trial.

8. The number of those under training for the teaching profession is rising rapidly. The aim of the training institutions, as Mr. Knowlton well says, is "to create a proper attitude of mind towards teaching," and not to lay down any hard and fast rules for the conveyance of instruction. So long as this remains the guiding principle of these institutions, there need be no fear that they will belie the hopes that have been founded on them. The difficulty is that the present period of training—less than a year—in the Training College and Normal Schools is hardly sufficient for the creation of that attitude and the problem is to lengthen that period so as to ensure the object in view. The steady increase in the number of Normal Schools—the number rose from 6 to 9 during the year—will help materially to that end, and the very necessary scheme for a Junior Training College at Jullundur will be proceeded with when funds allow.

9. The year was one of steady progress in professional and technical education. An important event in the history of the Medical and Veterinary Colleges was the opening by the Viceroy of their new buildings, completed last year. The increased facilities provided for veterinary study are already said to be producing marked results. The removal by the Chief Court of its restriction on the number of pleaders has increased the demands on the Law College. The staff has been reorganized and the number of students on the rolls has practically regained its former figure. The proper place of industrial education in the general system has been more clearly defined by the recommendations of the Standing Committee, but the Director gives a salutary warning in paragraph 46 of his Report to those who think that industrial education can bring about an economic revolution.

10. The number of Indian girls' schools has risen by 52 to 971, and the number of pupils, largely in lower primary classes, by 4,371 to 49,367 or nearly double last year's increase. Female education is, however, still in its infancy in this Province, and the lack of competent teachers, especially for the lowest classes, is inevitable at this stage. The report shows satisfactory development, and much credit is due to the various communities—Sikh, Arya Samaj and Dev Samaj—which have established and maintained admirable institutions for the secondary education of girls, but even these find it impossible to dispense with male teachers.

11. The European schools have had a successful year. The number of schools and scholars has remained unaltered The expenditure from all source has risen by Rs. 40,000 to Rs. 10,52,257. A much needed revision of the scale of salaries for the staff of the Lawrence Military Asylum at Sanáwar is being introduced, but the report remarks on the unattractiveness of pay and prospects

generally for men teachers. The examination results were good, and health and physical training appear to receive due attention. The Lieutenant-Governor is glad to see that European schools continue to be well represented on active service.

12. A section of the report is, as usual, devoted to Muhammadan education. The subject was reviewed at some length last year and the present report shows that there has been an increase in the attendance of Muhammadan pupils at primary schools, which would have been greater were it not that the war caused a large decrease in the Rawalpindi Division where many of the elder boys joined the army, while many of the younger were withdrawn to take the place of parents or brothers in military service. The figures for secondary education are somewhat more favourable, giving an increase of 1,395 as compared with one of 431 last year. The Muhammadan element in primary schools is 42 per cent., in secondary 29, and in Arts Colleges 22. As the Muhammadan percentage of the total population is 55, the two latter figures in spite of steady improvement in recent years are still unsatisfactory, and it is to be hoped that the steady increase of Muhammadan High Schools, to which Government has made liberal contributions, and the special measures of encouragement referred to in paragraph 67 of the report will help to redress the inequality. In the Veterinary College, the Mayo School of Art and Technical and Industrial Schools, Muhammadans, as usual, predominate, but in the Training, Medical and Law Colleges they contribute only 30, 11 and 10 per cent. of the students respectively. The paucity of Muhammadans in the Medical Department is very marked and Government has recently had some practical difficulty in finding Muhammadan Assistant Surgeons and Sub-Assistant Surgeons for posts on the frontier of the Empire which can be more suitably filled by Muhammadans than by members of other communities. In the Agricultural College their numbers have doubled, and 19 out of 86 are Muhammadans.

The explanation is no doubt to be found partly in the comparative poverty of the Muhammadan community. As the Lahore Inspector puts it, "the more expensive the education, the smaller is the number of Muhammadans." But possibly Muslim conservatism counts for something, and the fact that they take readily to "training classes and industrial schools which cheaply and readily provide them with a means of livelihood," speaks well for their practical commonsense and independence :

چو بر پیشهٔ باشد دست رس
کجا دست حاجت برد پیش کس

13. The report contains an interesting new paragraph on the education of low-castes. Praiseworthy efforts are being made, especially in the Ambála Division, to provide special schools for these classes, and it is interesting to hear that the prejudice against low-caste children attending ordinary schools is considered to be gradually dying out.

14. The Text-Book Committee continues to do useful work, and with the increasing output of educational works their task does not grow lighter. The flood of catch-penny manuals that issues from presses in England and India every year makes it more than ever necessary to guide school masters in the selection of books to be placed in the hands of their pupils.

15. The report bears evidence to the intelligent and thorough manner in which the officers of the Education Department are applying themselves to the solution of the many difficult problems to which their work gives rise and the Lieutenant-Governor desires cordially to acknowledge their labours. Mr. Godley was in charge of the Department during the year under report, with the exception of the six months from June to December 1915 when Mr. Richey

officiated for him. The thanks of the Lieutenant-Governor are due to both these officers for their efficient administration, and to the former for an interesting and comprehensive account of the satisfactory progress made during the year.

This is Mr. Godley's last report. In the spring he will retire from the Department over which he has presided with success for a period of ten years. The Lieutenant-Governor desires to take this opportunity of placing on record his appreciation of Mr. Godley's services to the cause of education in the Punjab. Last year's review showed the remarkable progress that had been made since he assumed the direction of the Department, and it is not necessary to repeat the statistics here. The officers of the Department will long remember Mr. Godley's *régime*, and the Lieutenant-Governor has derived the greatest assistance from his acute criticism and balanced judgment.

---

ORDER.—Ordered that the above remarks be printed and circulated with the report; also that they be published in the *Punjab Government Gazette*, and be forwarded to the Director of Public Instruction, Punjab, for information, and also that they be submitted to the Government of India in the Department of Education with copies of the report.

By order of His Honour the Lieutenant-Governor of the Punjab,

J. P. THOMPSON,

*Chief Secretary to Government, Punjab.*

## GENERAL.

### REVIEW OF THE ANNUAL MUNICIPAL ADMINISTRATION REPORTS AND RETURNS FOR THE YEAR 1915-16.

*Proceedings of His Honour the Lieutenant-Governor of the Punjab in the Boards and Committees (Committees) Department, No. 915, dated 21st December* 1916.

READ—

The Annual Municipal Administration Reports and Returns for the year 1915-16.

PART I.

REMARKS.—The number of municipalities in the Province was reduced by 3 to 100 during the year owing to the reduction to the status of notified areas of Tarn Taran (population 4,260), Ramnagar (population 5,256) and Akalgarh (population 3,943). The reasons for the reduction in the case of Ramnagar and Akalgarh were noticed in last year's review: in the case of Tarn Taran it was considered that the simpler form of administration was more suitable to the size of the town and the change was effected without any objection on the part of the inhabitants. In 29 out of the 100 municipalities the elective system has not yet been introduced. As noted in last year's review Government is willing to extend the elective system where there is a genuine desire for it and provided it is not likely to arouse local feuds or party feeling. Accordingly the opinions of local officers and of the committees concerned

1844 PGG

have been invited. The replies which have so far been received do not however indicate any very general desire for a change, though some municipalities would appear to be ripe for and desirous of the change. The boundaries of several municipalities were revised so as to include new urban areas which had grown up in their vicinity or to exclude purely agricultural lands to which it was desirable that the Land Alienation Act should apply.

2. There was a considerable falling-off—from 46 to 30·5—in the percentage of vacancies contested at elections, which is the more difficult to explain as the fact that the newly elected members were in most cases qualified to vote for the Legislative Council elections, might have been expected to stimulate contests. The highest percentage—48·5—was again in the Rawalpindi Division, and the lowest—18—in the Multan Division. On the other hand, in many cases where elections took place the contests were exceedingly keen, and the percentage of voters who came to the poll was 100 for the second year in succession in Miani, 97 in Karnal, 90 in Rohtak and Jalalpur Jattan, and over 70 in Kunjah, Gohana, Sonepat and Rewari. No figures are given with regard to the number of voters in the Lahore Division, but in Gujranwala elections were hotly contested in 8 cases out of 9. Allegations of malpractices were made by the unsuccessful candidates in several cases, but were not always substantiated. It is however noted that in Jhelum impersonation was a sinister feature of the elections, and in the case of Gujranwala attention is drawn to the improper use made of voters' certificates which as a precautionary measure appear to be collected by candidates prior to the election and returned to their supporters on the following day. In this town sweepers' votes are commonly reported to have fetched Re. 1 each. At present there are many different sets of election rules applicable to different municipalities, and the framing of a revised set of rules of general application to regulate the procedure for the registration of voters and the conduct of elections is now engaging the attention of Government. It is hoped that these rules will go some way towards eliminating or at least reducing the undesirable practices which have sprung up, such as false impersonation, use of forged votes and open sale of certificates—practices which cast discredit on the whole system of election and discourage some of the best men from coming forward as candidates. Excepting the 7 municipalities of Simla, Dalhousie, Murree, Bhakkar, Karor, Leiah and Hoshiarpur, every committee is empowered to elect its own president subject to the approval of Government in the case of first class and of the Commissioner in the case of second class committees. In practice, however, the great majority of the committees still either elect a president from among the *ex-officio* members or apply to Government or to the Commissioner, as the case may be, to appoint a president from among its members. In the year under review the distribution was—

| | | *No.* |
|---|---|---|
| Elected non-official presidents | ... | 10 |
| Elected officials ... | ... ... | 73 |
| Nominated non-officials | ... ... | 3 |
| Nominated officials | ... ... | 14 |
| Total | ... | 100 |

It need hardly be reaffirmed that Government has no desire to interfere with the discretion of the committees and would welcome an increase in the number of non-official presidents provided they command the confidence of the people and the municipal members, and discharge the duties of their office efficiently. Accordingly the policy of substituting non-official for official presidents in the smaller municipalities and notified areas has been kept in view, and effect has been given to it in several instances. But in many cases local factions

or sectarian differences make the position of an elected non-official almost untenable, and in certain cases it has been found necessary to revert to the old system for want of persons suitable for appointment, while in Khushab and Sahiwal it is reported that the appointment of non-official presidents has intensified intrigue and religious faction and has not proved a success.

3. The committees of Jhelum, Isa Khel, Sharakpur, Dajal, Dharmsala and Dalhousie failed to meet the prescribed number of times. In the case of the three first-named this failure was noticed last year also, and His Honour trusts that it will not be allowed to recur. Fifteen notified area committees also met less than six times each. The Ambala committee met 77 times, but on 12 occasions there was no quorum and 6 other meetings were adjourned. The Fazilka committee held 63 meetings, of which 2 were abortive for want of a quorum. Simla with 57 and Amritsar with 54 meetings came next. In Ferozepore also 57 meetings were held, but there was no quorum on 17 occasions and 11 meetings had to be adjourned. The committees of Murree, Hazro, Jalalpur Jattan, Rawalpindi, Jullundur, Jagadhri and Bhiwani met from 30 to 40 times each.

The average attendance of members was on the whole satisfactory, and was 90 per cent. or above in Sharakpur, Khem Karan, Zira, Kaithal and Gohana, while in Sargodha, Ludhiana, Ambala, Ferozepore, Jagadhri and Chiniot it was 50 per cent. or less. Attention was drawn last year to the poor attendance in Ferozepore and Chiniot, but in the former case the percentage has actually declined from 51 to 38, and in Chiniot there has been little improvement.

4. The reports, except in the case of the detailed reports of the first class municipalities, afford but little information on the general working of committees, whether with regard to the attitude of members towards their responsibilities or in respect of the actual discharge of their duties. The Deputy Commissioner of Gujrat remarks that "members show little interest unless personal feelings or the interests of their friends or faction are concerned," while the Deputy Commissioner of Ambala comments on the sharp contrast between the keenness of canvass and the subsequent apathy after election. Illustrations are not wanting of what, His Honour fears, are but too common features of municipal administration in the Province. One of these is the disinclination to interefere with private interests for the public good or the actual subordination of the general welfare to individual profit. Instances of this feature are to be found in the failure of the Ambala and Lahore committees to deal with the question of encroachments upon streets, and in the unsatisfactory manner in which the Sialkot committee deals with building applications and cases of building without sanction or in contravention of sanctioned plans. On the other hand, the Lahore committee has endeavoured to mitigate the effects of its past apathy by imposing a tax on extensions of *tharra*, and the Rawalpindi committee is taking stringent measures to prevent encroachments. A second feature of municipal administration which is to be deplored is the jealousy shown by committees of the exercise of executive power by their own officers. The Multan committee for long resisted all attempts to introduce an efficient Secretary, though the opposition has now happily been overcome. The Lahore committee too has shown itself very jealous of any powers exercised by the Health Officer and has only recently empowered him to prosecute for failure to comply with notices, and even in the case of the President, who has at last been authorised to issue notices under various sections of the Act, the delegation of powers has been qualified by the provision that every case in which it is proposed to issue a notice must be referred first to the ward member for his opinion. Even in Amritsar, where the committee is in many respects one of the most progressive in the Punjab, His Honour notes that the powers of an inspector of food and drugs have been withdrawn from an official with whose work the Health Officer expresses complete satisfaction. The tendency

noted above is contrary to the experience of all large and progessive municipalities elsewhere whose policy is to delegate executive authority so far as possible to their expert and responsible officials while maintaining in their own hands general control of municipal policy and finance and a general supervision—without petty or irritating interference—over the actions of their officials.

The inefficiency of many municipalities is, in the Lieutenant-Governor's opinion, due in no small degree to the fact that their officials are often more concerned with keeping on good terms with individual members than with discharging their duty to the tax-payer. The Lieutenant-Governor feels bound to make these remarks not with the object of discrediting municipal working but in order to emphasise the defects which in his view retard the development and efficiency of urban self-government in the Punjab.

The working of sub-committees receives favourable notice in a number of cases, among which Lahore and Lyallpur in particular may be mentioned; but His Honour notes with some surprise the anomaly that in Lahore the Public Health Sub-Committee is not given control over the conservancy establishment, and it certainly cannot be said that the present conservancy working is quite satisfactory.

On the whole, however, there has been steady progress in the improvement of sanitation and generally of the amenities of life in municipal towns, and the committees which initiate and finance these schemes of improvement are discharging not unworthily their duties to the towns under their charge. Such activity is naturally more apparent in the larger towns, and there are but few notified areas that can afford to indulge in elaborate projects. The question of the administration of small towns and large villages has been engaging the close attention of Government, and a draft Bill has been prepared and circulated for opinion, which aims at providing them with a form of administration suitable to their size, resources, and capabilities.

5. Bye-laws to regulate the sale of milk and butter were adopted during the year in Lahore, Ferozepore, Dalhousie, Gurdaspur and Hazro, and His Honour is glad to observe the interest which is being taken in this important question. In Fazilka those regulations have been supplemented by bye-laws requiring the licensing of cow-houses, an endeavour to improve the milk supply at its source which other committees would do well to imitate. In Amritsar a successful campaign has been conducted against purveyors of adulterated ghi and other unwholesome foods, and the question of the purity of the milk supply is being dealt with on comprehensive lines. The Municipal Act confers wide powers of inspection and destruction of deleterious food substances which are not commonly exercised, and His Honour trusts that the growing interest which is being shown by committees in passing bye-laws to control food supplies will be reinforced by an active exercise of their statutory powers especially in seasons where there is danger of cholera or similar epidemics. The Faridabad, Kaithal and Banga committees have framed bye-laws for the control and regulation of slaughter-houses, the Multan and Dalhousie committees for the control of the sale of meat, and the Murree committee for the regulation of bakeries, while the Dalhousie and Gujrat committees have adopted building bye-laws. There is abundant evidence that committees are realising in this way their duties in respect of the powers conferred upon them by the Municipal Act, and numerous sets of bye-laws have been submitted for the approval of Government: too often, however, the bye-laws submitted contain illegal provisions, while many provisions that would be useful are omitted. In order therefore to assist committees in this important branch of their duties a set of specimen bye-laws is being prepared and will be issued for their guidance.

6. The good work of a number of non-official presidents, vice-presidents and members is recognised in the reports, and His Honour's acknowledgments are due to the following gentlemen for their public spirit and efficient

discharge of their duties':--Lala Bishan Das of Banga, Rai Bahadur Pandit Devi Chand of Jullundur, Mr. John Powell of Murree, Rai Sahib Lala Ganga Ram and B. Nazar Muhammad of Ambala, Mr. J. Stewart of Kalka, Reverend F. Hasler of Kharrar, Khan Sahib Maulvi Abdul Ghani of Karnal, Lala Tek Chand of Jandiala, the Hon'ble Khan Bahadur Saiyid Mehdi Shah of Gojra, Rai Sahib Lala Sewak Ram of Jaranwala, and Khan Sahib Sheikh Ashraf Ali of Tandlianwala.

## PART II.—TAXATION.

7. The net income from octroi—Rs. 38,66,639—was over 3 lakhs greater than in the previous year and in fact exceeded the income from this source in the two years before the outbreak of war. The increase was general but was largest in respect of articles of food and drink, and may be attributed partly to the general recovery of internal trade, partly to the rise in prices which has increased the receipts in respect of goods taxed *ad valorem*, and partly to the closer attention paid to collection. The substitution of a terminal tax for octroi has now been finally sanctioned for Muktsar and Fazilka, and a terminal tax on certain exports has also been sanctioned for Gojra and since the close of the year for the notified areas of the Lyallpur District. No further proposals to replace octroi by this form of taxation have been received by Government, though they are said to be under consideration in a few cases. The question is, however, one which should receive the earliest attention in a considerable number of municipalities. The percentage of refunds on gross receipts from octroi was so high as 48 in Gujranwala, 36 in Rawalpindi, 33 in Bhiwani, and from 20 to 30 in fourteen other municipalities, while the cost of collection is also exceedingly high in many cases, and in several towns, as for example Gujranwala, Buriya, Bhiwani, Ballabgarh, Faridabad, Mianwali and Rawalpindi, from 40 to 50 per cent. of the gross collections is absorbed by refunds and collection charges. It is for this reason that the Lieutenant-Governor has lately in a number of instances refused to agree to proposals for raising additional income by revision of octroi schedules. Attempts to evade octroi appear also to be on the increase. In Lahore alone there were no fewer than 427 instances—an increase of over 23 per cent. over last year's figures. The total receipts from direct taxation amounted to only about Rs. $4\frac{1}{4}$ lakhs, of which about three-quarters were raised in the hill municipalities, and though His Honour recognises that popular opposition to direct taxation in any form is still very great, he considers that the time has come to press for more enlightened views on this subject, for the octroi system undoubtedly imposes an undue proportion of the burden of taxation upon the poor. In this connection a beginning might well be made with a more extended use of the powers to impose a tax to pay for the cost of water-supply. The total income realised by water-rate and by sale of water amounted to only about Rs. 3,40,000 in the year under review, while expenditure on water-supply amounted to Rs. 6,45,000 apart from depreciation charges, interest on and repayment of loans, and the cost of superior supervision. One of the recommendations of the Royal Commission on Decentralization was that all water-supply installations should be made to pay for themselves, and the object is one which should be kept in view by every committee, but in order to pay for the free supply of water from public stand posts it is not sufficient to charge fees for private supply and the imposition of a water-rate on house property should therefore receive consideration. The question of preventing waste of water is also one which should receive the close attention of every committee which has installed a water-supply. The methods which were adopted with conspicuous success in Amritsar last year might well be imitated by other committees, including Lahore where the adequate supply of water becomes a burning question every hot weather.

PART III.—ACCOUNTS.

8. It has already been noted that receipts from octroi were over Rs. 3 lakhs greater than in the previous year; sale of water also produced Rs. 59,000 more, sale of land and produce of lands about Rs. 39,000 more, while increases under various other heads amounted to about Rs. 2½ lakhs, including an item of Rs. 1,22,765 withdrawn from deposit with a bank by the Amritsar committee. These increases were, however, much more than counterbalanced by a falling-off of about Rs. 15 lakhs in the amount of loans and grants from Government and decreases of about another lakh under various other heads, and the total income—Rs. 74,35,062—was more than Rs. 8¾ lakhs less than in the previous year. The fall in income was accompanied by a corresponding decrease in expenditure, which amounted to Rs. 74,93,721 as against Rs. 83,67,181. In 1914-15, however, the apparent expenditure was swollen by the deposit of about Rs. 10 lakhs, including the Government grant of Rs. 9 lakhs for the Lahore sewage scheme, in saving banks: but, apart from this, expenditure in the year under review was considerably less under a number of heads. The chief decreases were under the heads "Public Works (roads and buildings)" Rs. 1,32,226, "Other miscellaneous charges" Rs. 1,21,776, "Water-supply" Rs. 97,691, "Unforeseen charges" Rs. 22,893, "Permanent advances" Rs. 33,466, "Police" Rs. 12,000, and "Conservancy" Rs. 44,000. The decrease under the last head was, however, only nominal, as there was an expenditure of Rs. 56,279 under the new head "Health Officers and Sanitary Inspectors," which was formerly not distinguished. Other large increases were "Contributions to the Electricity Department" Rs. 3 lakhs, due to the opening of the Amritsar works, "Deposits" Rs. 62,526, "Public Instruction" Rs. 88,776, "Hospitals and Dispensaries" Rs. 41,668, "Drainage" Rs. 52,937, "Repayment of loans" Rs. 25,853, "Lighting" Rs. 23,000, "Plague" Rs. 15,530 and "Markets and slaughter-houses" Rs. 11,400. Expenditure on public instruction amounted to Rs. 7,72,450 or about 10·3 per cent. of the total, but of this 21 per cent. was met by the income from fees and 21 per cent. from Government grants. Most committees are fairly discharging their responsibilities in the matter of education, but His Honour cannot agree that an increase of Rs. 3,000 in the expenditure under this head "bears testimony to the Lahore committee's keen interest in the education of children of the poorer classes," seeing that in the past year the committee's expenditure on public instruction amounted to only about 6 per cent. of the total expenditure and about a quarter of this was met from fees and contributions from Government. "Hospitals and Dispensaries" accounted for rather over 9 per cent. of the total expenditure, and practically the whole of this fell on the general funds of the committees, less than 4 per cent. being recovered in fees. In his review on the working of district boards His Honour has called attention to the question of fees to be charged by local bodies for medical attendance and the supply of drugs to those who can afford to pay for them, and the matter is one to which even more attention should be paid in municipalities where the general standard of education is higher and the number of those capable of paying for medical relief is greater than in rural circles. The percentage of income devoted to medical relief is at present only about half the percentage formerly prescribed by rule as the minimum provision to be made by local bodies, and every effort should therefore be made to increase the income from fees, so that more adequate provision may be made. In Amritsar an eye-ward for the civil hospital was completed at a cost of Rs. 58,000, to which Government contributed Rs. 25,000, and has been lent by the municipal committee for the purpose of a hospital for sick and wounded soldiers. The public-spirited action of the Amritsar municipal committee and of the Jullundur local bodies, who also put at the disposal of the Military authorities a large portion of their well-equipped hospital, while in both cases the local public contributed generously for the comforts of the sick and wounded soldiers, has merited grateful recognition by Government.

Expenditure on Public Works was considerably less than in the previous year, and the percentage of establishment charges on the cost of works executed was consequently higher. In a number of cases this percentage is, however, excessive : in Jhang it is so high as 52·8, in Rawalpindi 35, Gujranwala 33·6, Jullundur 25, Sialkot 23 and Lahore 20·4. The cost of general administration and collection is also unduly high in a number of municipalities, amounting to 17 per cent. of the total expenditure in Jullundur, 15·8 per cent. in Batala, 14·8 per cent. in Jhang, and 13 per cent. in Rawalpindi as compared with a general average of 10·3 per cent. In Jhang the high figure is no doubt partly accounted for by the fact that the committee administers two towns at a distance of about 2 miles from each other, but in the remaining cases some reduction should be possible. The reports indicate a general lack of supervision over establishments in several cases. Multan reports that peculation and extortion by members of the subordinate establishment were notoriously rife and when cases were brought to light inadequate punishments were inflicted with the natural result that no real improvement could be effected. Embezzlements were discovered at Gujranwala, Montgomery, Nankana Sahib and Shahkot, while at Khangah Dogran a muharrir obtained sums of money by means of forged documents. His Honour is forced to the conclusion that adequate control over and inspection of the working of the municipal employés is in many cases sadly wanting.

9. The municipalities of Murree, Dinga, Zira and Rahon and seven notified areas failed to close the year with the prescribed minimum balance. The closing balance of 13 municipalities and of 25 notified areas was in excess of their expenditure during the year. In many cases the balances will be expended in the execution of large drainage or water-supply schemes, but in a number of instances, particularly in the Jullundur Division, there is no apparent reason for these accumulations.

10. Government loans amounted to only about Rs. 2½ lakhs as compared with nearly Rs. 9 lakhs in the previous year. The loans were all granted in connection with water-supply schemes, the largest being Rs. 1 lakh received by Rewari. Government grants amounted to Rs. 5,95,074, of which Rs. 1,91,560 were for educational and medical purposes and Rs. 4,03,514 for general purposes. Under the last head are included grants distributed by the Sanitary Board, of which the principal amounts were Rs. 1,15,617 to Dera Ghazi Khan, Rs. 70,000 to Rewari, Rs. 50,000 to Sialkot for water-supply schemes, and Rs. 42,360 to Rawalpindi and Rs. 8,723 to Gurdaspur for intra-mural drainage schemes.

## PART IV.—GENERAL.

11. The epidemics of plague and cholera with which the province was visited during the year were among the worst on record. Kasur, Gohana, Amritsar, Lahore and Kunjah suffered most severely from cholera and Jullundur, Amritsar, Panipat and Ludhiana from plague. On the other hand, malaria was not prevalent in epidemic form and the mortality from small-pox was the lowest on record. The Vaccination Act was extended to Miani, Sargodha and Shujabad, and rules under the Act were framed by the committees of Palwal, Sialkot and Lyallpur.

The year witnessed small extensions of railway communication in the opening of the Mandra-Bhon, Sialkot-Narowal and Jind-Panipat lines—developments which should be of considerable benefit to the small towns served by these lines.

12. His Honour regrets to observe that in some instances the annual reports were submitted long after the prescribed date and that the statements when received contained many inaccuracies. He trusts that local officers will take steps to ensure in future the careful preparation and punctual submission of all returns.

ORDER.—Ordered that the copies of the foregoing remarks be forwarded to all Commissioners of Divisions and Deputy Commissioners in Punjab and the Secretary to Government, Punjab, Public Works Department, Buildings and Roads Branch, and be submitted to the Government of India in the Education Department.

Ordered also, that the remarks and a translation of them be published in the *Punjab Government Gazette*, English and Urdu versions, respectively, and that copies of the Urdu translation be supplied to Deputy Commissioners for the information of the Municipal Committees.

By order of His Honour the Lieutenant-Governor of the Punjab,

O. F. LUMSDEN,

*Financial Secretary to Government, Punjab.*

---

## Appendix to the Punjab Municipal Review for 1915-16.

*Extract from the Accountant-General's Report on Local Funds in the Punjab for the year* 1915-16.

PUNJAB.

No. BOOK 1-1612.

*Dated Lahore, the* 16*th August* 1916.

FROM

W. ALDER, ESQUIRE, M.A., I.C.S.,

*Accountant-General, Punjab,*

To

THE HON'BLE MR. J. P. THOMPSON, I.C.S.,

*Chief Secretary to Government, Punjab.*

SIR,

As required by Article 1384-I of the Civil Account Code, I have the honour to submit a report on the Local Funds in the Punjab for the year 1915-16.

* * * * * * *

3. The accounts of all the funds, except the Educational Fund, continue to be audited on the spot by local auditors, and the Examiner's audit reports are submitted for the information of Government.

1.—DISTRICT FUNDS.

4. There were altogether 28 District Funds, one for each district. The transactions of each fund are shown separately in Annexure A.

5. The total transactions of all the funds compare as below with those of the preceding year :—

| Year. | Opening balance. | Receipts. | Total. | Payments. | Closing balance. |
|---|---|---|---|---|---|
| | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| 1914-15 ... ... | 34,23,898 11 3 | 82,58,834 13 8 | 1,16,82,733 8 11 | 73,58,438 1 3 | 43,24,295 7 8 |
| 1915-16 ... ... | 43,24,295 7 8 | 75,67,812 11 7 | 1,18,92,108 3 3 | 85,48,097 7 | 33,44,010 8 8 |

Balances have generally decreased ; the payments made during the year having been heavier than those of the preceding year. The least strong position

is shown by the Gurgaon, Ludhiana, Amritsar, Gurdaspur, Shahpur and Dera Ghazi Khan Funds, which have closed with balances small in comparison with their expenditure. The balance of the Multan Fund has increased during the year by nearly one lakh.

6. The expenditure has, on the whole and subject to the remarks made in individual Audit Notes, been incurred on the objects authorized by Act XX of 1883 and the rules and orders thereunder.

* * * * * * *

### 9.—Municipal Funds.

18. There are in all 103 Municipalities and 91 Notified Areas. In 1914-15 the corresponding figures were 103 and 90. The net increase of one in the number of Notified Areas is due to the exclusion of the Kadian and Hasan Abdal Notified Areas which have been closed and the addition of 3 new Notified Areas, *viz.*, Tohana, Budhlada and Dab Wali in the Hissar District.

19. The total transactions of these funds are shown in the statement below, the transactions of each fund being shown separately in Annexure B. The figures for 1914-15 are also shown for purposes of comparison :—

| Name of Fund. | Opening balance. | Receipts. | Total. | Payments. | Closing balance. |
|---|---|---|---|---|---|
| | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| Municipal Funds ... | 27,65,848 8 1 | 59,41,796 7 3 | 87,07,644 15 3 | 58,84,496 9 2 | 28,23,148 6 1 |
| Notified Areas .. | 5,72,643 0 9 | 5,47,103 2 6 | 11,19,746 3 3 | 5,09,644 15 10 | 6,10,101 3 5 |
| Total, 1915-16 ... | 33,38,491 8 10 | 64,88,899 9 8 | 98,27,391 2 6 | 63,94,141 9 0 | 34,33,249 9 6 |
| Total, 1914-15 ... | 31,76,665 8 10 | 66,88,952 10 9 | 98,65,618 3 7 | 65,27,126 10 9 | 33,38,491 8 10 |

The proportion which the closing balance bears to the expenditure varies considerably in different Municipalities. Instances of very high balances are the Rewari Municipality (Gurgaon) and the Eminabad Municipality (Gujranwala). On the other hand, there are no less than five Municipalities where the closing balance is less than an average monthly expenditure, *viz.*, Zira (Ferozepore), Akalgarh (Gujranwala), Rawalpindi, Jhelum and Dinga (Gujrat). It would seem that the position of these Municipalities might with advantage be strengthened.

20. With the exception of the Lahore and Simla Municipalities all Municipalities and Notified Areas bank with the Government Treasuries.

I have the honour to be,

Sir,

Your most obedient Servant,

W. ALDER,

*Accountant-General, Punjab.*

## ANNEXURE A.

*Statement showing the opening balances, total receipts, payments and closing balances of the several District Funds in the Punjab for the year* 1915-16.

| Serial No. | Name of Fund. | Opening balance. | Receipts. | Total. | Expenditure. | Closing balance. |
|---|---|---|---|---|---|---|
| | | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| 1 | Hissar ... | 3,11,658 13 4 | 2,44,982 10 1 | 5,56,641 7 5 | 3,05,731 12 9 | 2,50,909 10 8 |
| 2 | Rohtak ... | 1,35,438 14 8 | 3,07,315 13 9 | 4,42,754 11 6 | 3,23,961 13 7 | 1,18,792 13 11 |
| 3 | Gurgaon ... | 1,21,578 1 5 | 2,56,820 1 2 | 3,78,398 2 7 | 3,13,281 12 2 | 65,116 6 5 |
| 4 | Karnal ... | 1,84,706 14 9 | 3,07,737 1 8 | 4,92,444 0 5 | 3,56,639 13 0 | 1,35,804 3 5 |
| 5 | Ambala ... | 1,60,499 12 11 | 2,57,503 10 11 | 4,18,003 7 10 | 2,98,220 15 6 | 1,19,782 8 4 |
| 6 | Simla ... | 9,917 4 1 | 16,896 12 0 | 26,814 0 1 | 16,979 13 1 | 9,834 3 0 |
| 7 | Kangra ... | 1,19,498 0 9 | 2,35,591 10 1 | 3,55,089 10 10 | 2,60,790 11 11 | 94,298 14 11 |
| 8 | Hoshiarpur ... | 2,16,628 14 8 | 3,62,673 1 6 | 5,79,302 0 2 | 4,77,789 9 10 | 1,01,512 6 4 |
| 9 | Jullundur ... | 1,47,389 14 10 | 3,29,871 1 4 | 4,77,261 0 2 | 3,11,687 7 5 | 1,65,573 8 9 |
| 10 | Ludhiana ... | 50,071 12 8 | 2,57,494 4 8 | 3,07,566 1 4 | 2,55,154 9 2 | 52,411 8 2 |
| 11 | Ferozepore ... | 2,99,634 12 11 | 3,83,800 4 9 | 6,83,435 1 8 | 3,89,002 9 1 | 2,94,432 8 7 |
| 12 | Lahore ... | 1,29,496 7 3 | 2,09,134 1 0 | 3,38,630 8 3 | 2,58,739 6 10 | 79,891 1 5 |
| 13 | Amritsar ... | 1,28,980 11 10 | 3,08,021 11 0 | 4,37,002 6 10 | 3,88,376 14 10 | 48,625 8 0 |
| 14 | Gurdaspur ... | 1,38,173 4 4 | 3,07,567 6 5 | 4,45,740 10 9 | 3,68,083 4 2 | 77,657 6 7 |
